1	Introduction	1
1.1	General	1
1.2	Conclusions	3
2	Basics of Zeolites	5
2.1	Zeolites	5
2.1.1	Natural Zeolites	8
2.1.2	Synthetic Zeolites	8
2.1.3	Properties of Zeolites	9
2.1.4	Physical Properties	9
2.1.5	Chemical Properties	12
2.1.6	Ion Exchange and Adsorption Properties	13
2.1.7	Mineralogical Properties	14
2.1.8	Morphological Properties	15
2.1.9	Thermal Characteristics of Zeolites	18
2.1.10	Stability of Zeolites in Acidic Medium	19
2.1.11	Crystal Structure of the Zeolite	21
2.1.12	Framework Structure of Zeolitic Crystals	22
2.1.13	Surface Properties	25
2.1.14	Critical Evaluation of Properties of Some Commonly Available Zeolites	26
2.2	Conclusions	28
	References	28
3	Conventional Methods for Synthesis of Fly Ash Zeolites	33
3.1	Methods of Synthesis of Zeolites	33
3.1.1	Conventional Hydrothermal Method	35
3.1.2	Microwave Assisted Hydrothermal Method	41
3.1.3	Fusion and Hydrothermal Method	42
3.1.4	Molten Salt Method	45
3.2	Critical Appraisal	46

3.3	Conclusions	48
	References	49
4	Mechanism of Zeolitization of Fly Ash	53
4.1	Modelling of the Fly Ash Particle	53
4.2	Chemical Reaction Potential of the Fly Ash	54
4.3	Conclusions	61
	References	61
5	Novel Techniques for Synthesis and Characterization of Fly Ash Zeolites.	63
5.1	Materials	64
5.2	Alkali Activation of the Fly Ash	64
5.2.1	A Novel Hydrothermal Technique	64
5.2.2	Three Step Activation by Fusion Technique	69
5.3	Characterization of Products	71
5.3.1	Characterization of the Supernatant	71
5.3.2	Characterization of the Alkali Activated Fly Ash (AAF)	73
5.3.3	Determination of Crystallite Size	90
5.4	Analysis of the Results of Hopper Ash and Lagoon Ash	100
5.4.1	Superiority of Hopper Ash Over Lagoon Ash	100
5.4.2	Variation of Silicon Aluminium Ratio (SAR)	107
5.4.3	Correlation Between <i>CEC</i> and <i>SAR</i>	115
5.5	Conclusions	134
	References	135
6	Major Findings of the Three-Step Activation Technique	139
6.1	Synthesis of Higher Grade Zeolites from Hopper Fly Ash	139
6.1.1	Characteristics of the Filtrates	140
6.1.2	Characteristics of the Hopper Fly Ash and Residues	140
6.2	Purification of Fly Ash Zeolites.	155
6.2.1	Monitoring Relative Variations Between Two Steps of TSA.	155
6.2.2	A Conceptual Model for Step Wise Purification of FAZ.	161
6.3	Quantification of Transitions in Fly Ash-Zeolite and NaOH-Water Systems	164
6.4	Formation of Meso- and Micro-pores by TSA.	172
6.5	Thermal Stability of Superior Fly Ash Zeolites Synthesized by TSA	177
6.6	Synthesis of High Grade Zeolite by TSA-Fusion	178
6.6.1	Need of Reactivation by Fusion.	179
6.6.2	Evaluation of Major Transition in the Residues of Three-Step Fusion	180

6.7	Comparative Study of TSA Products Obtained from Hydrothermal and Fusion Methods	184
6.7.1	Fourier Transform-Infrared (FT-IR) Analysis.	185
6.8	Conclusions	187
