Contents

1 Solutions of Dynamic Problems Based on the Refined Model 1
1.1 Free Vibrations of Rectangular Plates. 1
1.1.1 Introduction 1
1.1.2 Problem Formulation. Governing Equations 2
1.1.3 Solution Technique 6
1.1.4 Problem Solving. Analysis of the Results 9
1.2 Free Vibrations of Shallow Shells 12
1.2.1 Introduction 12
1.2.2 Problem Formulation. Governing Equations 12
1.2.3 Problem Solving Method 17
1.2.4 Numerical Results 19
1.3 Free Vibrations of Closed and Open Cylindrical Shells 29
1.3.1 Introduction 29
1.3.2 Main Relations. Governing Equations 29
1.3.3 Solution Procedure 33
1.3.4 Analysis of the Results 36
1.4 Free Vibrations of Cylindrical Shells Made of Functionally Gradient Materials 46
1.4.1 Introduction 46
1.4.2 Problem Statement. Basic Relations. 47
1.4.3 Three-Dimensional Elasticity Theory 51
1.4.4 Problem Solving Method 53
1.4.5 Numerical Results and Their Analysis 55
References 59

2 Some Solutions of Stationary Problems Based on 3D Theory 61
2.1 Stress–Strain State of Anisotropic Cylinders of Finite Length 61
2.1.1 Introduction 61
2.1.2 Transversally-Isotropic and Orthotropic Cylinders 63

2.2 Stress–Strain State of Heterogeneous Cylinders of Finite Length 71
2.2.1 Basic Equations 71
2.2.2 Solution Technique 73
2.2.3 Numerical Results 76
2.3 Free Vibrations of Anisotropic Heterogeneous Cylinders of Finite Length 78
2.3.1 Introduction 78
2.3.2 Problem Statement 79
2.3.3 Approach Based on Using the Straight-Line Method 80
2.3.4 Approach Based on the Application of the Semi-analytical Finite-Element Method 87
2.3.5 Spline-Approximation Approach 96
