1	Introduction	1
1.1	Brief History of Research and Application of Flotation and Reagents	1
1.2	Classification and Significance of Flotation Reagents	4
1.2.1	Classification of Flotation Reagents According to Their Uses	4
1.2.2	Classification of Flotation Reagents According to Their Roles	5
1.2.3	Classification of Flotation Reagents According to Their Structures	5
1.2.4	Classification of Flotation Reagents According to Their Chemical Constituents	5
1.2.5	Classification of Flotation Reagents According to Characteristics of <i>Coordination Chemistry</i>	7
	References	8
2	Interaction Between Minerals and Reagents	9
2.1	Various Theories on Interaction Between Collectors and Minerals	9
2.1.1	Main Interactions Between Collector and Mineral	9
2.1.2	Adsorption Models of Collector on Mineral	10
2.2	Adsorption Equation of Flotation Reagent on Mineral Surface	18
2.2.1	Adsorption Isotherm Model	18
2.2.2	Adsorption Isotherm of Flotation Reagent on Mineral Surface	21
2.2.3	Adsorption Kinetics Equation of Flotation Reagent on Mineral Surface	27

2.3	Structure of Adsorption Film and Flotation Behavior of Mineral.	27
2.3.1	Structure of Adsorbed Layer	27
2.3.2	Relationship of Collector Adsorption and Mineral Flotation	28
2.4	Mineral Structure, Bonding Characteristics, and the Reaction of Reagents.	33
2.4.1	Geochemical Classification of Mineral Elements and Their Interaction With reagent	33
2.4.2	Structure and Valence Bond of Mineral and Their Reactions with Reagents	34
	References.	37
3	Structure and Property of Polar Group of Collector	39
3.1	Structural Characteristics of Collector Molecule and Independent Effect of Chemical Groups Belong to Surface Chemistry	39
3.2	Effect of Polar Group Structure on Dissociation of Reagent and Adsorption in Electrical Double Layer of Mineral Surface	40
3.2.1	Dissociation of Collector and Its Flotation Function	40
3.2.2	Zero Charge Point of Mineral and Dissociation Constant of Collector, and Their Interrelation in Flotation	46
3.2.3	Adsorption of Amphoteric Collector in Electric Double Layer.	50
3.2.4	Effect of Polar Group Structure on Dissociation of Collector	52
3.3	Molecular Structure of Nonionic Reagent and Adsorption by van der Waals Force	52
3.3.1	van der Waals Force Between Collector Molecules.	53
3.3.2	Relation between Reagent Molecular Structure and van der Waals Force.	56
3.3.3	Hydrogen Bonding Adsorption of Reagent	56
3.4	Polar Group Structure and Chemisorption	58
3.4.1	Common Solidophilic Atoms in Polar Group	58
3.4.2	Bonding Capability of Solidophilic Atoms	60
3.5	Inductive Effect in Polar Group of Collector	64
3.5.1	Introduction of Inductive Effect.	64
3.5.2	Inductive Effect in Xanthate Molecule.	64
3.5.3	Inductive Effect in Thionocarbamates Molecule as Collector [9]	66
3.5.4	Inductive Effect in Aerofloat Collector Molecule.	67

3.5.5	Comparison of Inductive Effect in Xanthate, Dithiocarbamate, and Aerofloat	70
3.5.6	Inductive Effect in Collector of Nonsulfide Minerals	71
3.6	Conjugative Effect in Polar Group of Collector	75
3.6.1	Introduction of Conjugative Effect	75
3.6.2	Conjugative Effect in Xanthate Molecule	77
3.6.3	Conjugative Effect in Aromatic Collector	79
3.7	Polar Group of Coordinating Collector	81
3.7.1	Major Features of Coordinating Collector	81
3.7.2	Structure and Property of Polar Group of Coordinating Collector	82
3.7.3	Functional Mechanism of the Coordinating Collector	87
3.7.4	Classification of the Coordinating Collector	89
	References	91
4	Structure and Property of Nonpolar Group of Collector	93
4.1	Role of Nonpolar Group of Collector	93
4.2	Structure, Solubility, and Surface Activity of Nonpolar Group for Flotation Reagent	96
4.2.1	Solubility of Organic Liquid in Water	97
4.2.2	Surface Activity and Solubility of Organic Liquid in Water	99
4.2.3	Solubility and Surface Activity of Heteropolarity Organic Solid Matter	99
4.2.4	Comparison of Hydrophobic Association Energy of Nonpolar Group and Electrostatic Interaction Energy of Collector During Double Electric Layer Adsorption	101
4.3	Normal Alkyl Chain	102
4.4	Isoalkyl Group	107
4.5	Unsaturated Hydrocarbon Chain	111
4.6	Aromatic Group	120
4.7	Other Kinds of Nonpolar Groups	122
4.7.1	Cycloalkyl	122
4.7.2	Alkoxy	122
	References	124
5	Structure Relationship Between Polar and NonPolar Group in Collector Molecule	127
5.1	Correlation Between Size of NonPolar Group and Variety of Polar Group	127
5.2	Relationship Between Number and Position of Polar Group and NonPolar Group	130

5.2.1	Two or More of Polar Groups in a Collector Molecule	130
5.2.2	Two or More of NonPolar Groups in Collector Molecule	131
5.2.3	Position of Polar Group in Collector Molecule	131
	Reference	133
6	Theoretical Criteria and Calculation for Collector Performance.	135
6.1	Solubility Product Theory of Reaction of Flotation Reagent and Related Calculation	135
6.1.1	Solubility Product Theory of Collector Reaction	135
6.1.2	Calculation for the Optimum Conditions of Interaction Between Collector and Mineral Using Solubility Product	140
6.1.3	Diagram of Solubility Product Calculation	145
6.1.4	Comparison and Discussion of Computational Methods of Solubility Product.	148
6.1.5	Research on Structure and Performance of Reagent via Solubility Product Calculation	150
6.2	Critical Micelle Concentration and Related Calculation for Flotation Reagent	155
6.2.1	Critical Micelle Concentration (<i>CMC</i>) and Related Calculation Methods	155
6.2.2	General Relation Between <i>CMC</i> and Structure of Reagent.	156
6.2.3	Application of <i>CMC</i> to Predict Reagent Performance.	161
6.3	Hydrophile-Lipophile Balance (<i>HLB</i>) for Flotation Reagent.	164
6.3.1	Hydrophile-Lipophile Balance (<i>HLB</i>) and Related Calculation Methods	164
6.3.2	Relationship Between <i>HLB</i> and Other Physical Property Values of Reagents	168
6.3.3	Application of Molecular Fragment Method to Calculate Hydrophile-Lipophile Property for Flotation Reagent.	170
6.3.4	The Prediction of Uses of Reagent	177
6.4	Electronegativity and Related Calculation for Flotation Reagent.	180
6.4.1	Electronegativity and Related Calculations	180
6.4.2	Calculation of Group Electronegativity of Flotation Reagent	182
6.4.3	Relation Between Group Electronegativity and Physical and Chemical Properties of General Surfactant	188

6.4.4	Relationship Between Group Electronegativity and Properties of Flotation Reagents	191
6.4.5	Uses of Group Electronegativity to discuss the Structure—Performance of Flotation Reagent	195
6.4.6	Uses of Group Electronegativity to Hydrophilicity—Hydrophobicity Balance of Polar and Non-polar Groups in a Reagent Molecule	203
6.4.7	Application of Group Electronegativity to Classification and Uses of Flotation Reagents	204
6.5	Steric Size of Collector Molecule and Its Flotation Selectivity	206
6.5.1	General Relation Between Steric Size of Reagents and Their Collector Performance	206
6.5.2	Rough Calculation for Steric Size of Collector Molecule	208
6.5.3	Relation between Steric Size of Polar Group and Selectivity of Collector	214
6.5.4	Relationship Between Steric Size of Non-polar Group and Selectivity of Collector	218
6.5.5	Selectivity of Flotation Reagents— x_g Calculation and Diagram	219
6.6	Molecular Orbital Approach of Reagent Performance	223
6.6.1	Introduction of Molecular Orbital Approach (<i>HMO</i>)	223
6.6.2	Application of <i>HMO</i> to Calculate Orbit Energy and Electron Density Distribution	224
6.6.3	Application of <i>HMO</i> to calculate Theoretical Index	228
6.6.4	Application of <i>HMO</i> to calculation of flotation reagent	233
6.6.5	Application of Electron Density to Discuss the Structure—Performance of Polar Group	240
6.6.6	Application of Valence Theory and <i>HMO</i> to Discuss the Bonding Property and Mechanism of Reagents	249
6.6.7	Application of <i>HMO</i> and Synergism of Back-Donation Bond to Discuss the Bonding and Selectivity of Reagent	252
6.6.8	Application of <i>HMO</i> to Discuss the Structure—Performance of Non-polar Group	256
6.6.9	Application of <i>HMO</i> to Discuss and Compare Several Collectors	260

6.7	Comprehensive Applications of Various Theoretical Criteria . . .	263
6.7.1	Characteristic of the Sulfide Collector	267
6.7.2	Characteristic of the Nonmetal Oxide Collector.	267
6.7.3	Characteristic of the Rare and Ferrous Metal Oxide Collector	268
6.7.4	Characteristic of Organic Depressant.	268
6.7.5	Characteristic of Frother	268
	References.	276
7	Structure and Performance of Frother	279
7.1	Classification of Frothers and Their Structure Characteristics.	279
7.2	Role of Frother in Mineral Flotation.	282
7.2.1	Criteria for Frother Performance	282
7.2.2	Relation Between Solution Concentration and Surface Tension, Frothing Capability of Frother	285
7.2.3	Interaction Between Frother and Other Reagent	286
7.3	Effect of Polar Group Structure on Frothing Performance	288
7.3.1	Effect of Polar Group on Solubility of Frother	288
7.3.2	Effect of Polar Group on Dissociation Degree of Frother	290
7.3.3	Effect of Hydratability and Cross Section of Polar Group on Frother Performance	291
7.3.4	Effect of Chemical Properties of Polar Group on Frother Performance.	292
7.3.5	Effect of Quantity and Position of Polar Group.	293
7.4	Effect of Nonpolar Group Structure on Flotation Performance	294
7.4.1	Effect of n-Alkyl	294
7.4.2	Effect of Aryl and Alkylaryl	294
7.4.3	Effect of Isoalkyl and Unsaturated Aliphatic Hydrocarbon	295
7.4.4	Effect of Alkoxy	297
7.5	Prediction of Frothing Performance via Reagent Structure and Calculation.	299
7.5.1	Concept and Calculation of Parachor.	299
7.5.2	Application of Parachor to Prediction of Frother Performance.	301
7.5.3	Application of <i>HLB</i> to Prediction of Frother Performance.	304
	References.	305
