

Contents

1	Vectors and Tensors	1
1.1	Introduction	1
1.2	Vector Representations	3
1.3	Dyadics	7
1.4	Dyadic Representations	8
1.5	Vector Differential Operator	11
1.6	Orthogonal Curvilinear Coordinates	13
1.7	Stokes Theorem	16
1.8	Divergence Theorem	20
1.9	Green Identities	23
1.10	Heaviside Step and Dirac Delta Functions	24
1.11	Green Functions	31
	Bibliography	35
2	Fundamental Equations	37
2.1	Conservation Equations	37
2.2	Fluid Pressure Tensor	39
2.3	Gravity	42
2.4	Eulerian and Lagrangian Descriptions	43
2.5	Rates of Change of Material Integrals	46
2.6	Equations of Change	48
2.7	Classical Macroscopic Equations	54
2.8	Extended Macroscopic Models	55
2.9	Plasma Pressure Tensor	57
	2.9.1 Invariant Form for the Traceless Component	57
	2.9.2 Parallel, Cross and Perpendicular Components	59
2.10	Parallel Viscosity in an Ion-Electron Plasma	61
2.11	Heat Flux [★]	65
2.12	Magnetic Induction	67
	Bibliography	69

3	Basic Fluid Dynamics	71
3.1	Fundamental Model	71
3.2	Ideal Fluid Model	73
3.3	Vorticity and Irrotational Flow	77
3.4	Subsonic Flow and the Incompressible Approximation	80
3.5	Potential Flow	82
3.6	Solving the Laplace Equation	84
3.7	Pressure Variation in Ideal Subsonic Flow	88
3.8	Boundary Layers	90
3.9	Vortices	93
3.10	Stokes Flow Past a Sphere	97
3.11	Exact Viscous Flow Solutions	100
3.12	Singular Perturbation Theory	101
3.13	The Oseen Correction	102
3.14	Dynamical Meteorology and Oceanography [★]	107
	Bibliography	110
4	Waves in Fluids	113
4.1	Introduction	113
4.2	Short-Wavelength Approximation	116
4.3	Sound Waves on a Slowly Varying Background Flow	118
4.4	The Sonic Wake from a Point Source	120
4.5	Water Waves	124
4.6	Floating Flexible Plates and Surface Tension	128
4.7	An Interface Between Two Fluids	136
4.8	Local Averaging	138
4.9	Wave Reaction on a Background Mean Flow	142
4.10	Oscillation-Centre (OC) Description	145
4.11	Shock Waves	149
4.12	Shock Structure	152
	Bibliography	154
5	Magnetohydrodynamics (MHD)	157
5.1	Introduction	157
5.2	Maxwell Equations	158
5.3	Pre-Maxwell Equations	159
5.4	Galilean Invariance	160
5.5	Conducting Liquids	162
5.6	Plasma MHD	164
5.7	Ideal MHD Model	165
5.8	“Frozen-In” Magnetic Field	169
5.9	Ideal MHD Waves	171

5.10	MHD Equilibria (Magnetohydrostatics)	175
5.10.1	Magnetically Confined Plasma Equilibria	176
5.10.2	Force-Free Equilibria	178
5.10.3	Variational Principles for MHD Equilibrium	179
5.11	Magnetic Coordinates	180
5.12	Advected Ideal MHD Discontinuities	184
5.13	Vacuum Fields	190
5.14	Resistive MHD Model	194
5.15	Hall MHD Model	195
5.16	Advected Non-ideal MHD Discontinuities [★]	197
	Bibliography	200
6	MHD Stability Theory	203
6.1	Introduction	203
6.2	Normal Modes in a Plasma Slab	206
6.3	Ideal Gravitational Interchange Instabilities	207
6.4	Magnetic Field Shear and Slab Modes	209
6.5	Ideal MHD Variational Principle	211
6.5.1	Linearised Equation of Motion	211
6.5.2	Identification of ΔW and Self-adjointness	212
6.5.3	Heuristic Form of ΔW	216
6.5.4	Physical Interpretation of Terms in the Plasma Contribution	217
6.5.5	Brief Note on the Eigenvalue Spectrum	219
6.6	Ideal Instabilities in Cylindrical Geometry	219
6.7	Ideal Instabilities in Toroidal Geometry	226
6.7.1	Reduced $\mathcal{K}$ and ΔW in the Generalised Flute Ordering	228
6.7.2	2-Field Reduction: Elimination of χ	230
6.7.3	1-Field Reduction: Elimination of $\xi_{\parallel}$	231
6.7.4	Ballooning Equation	232
6.7.5	Geometric Interpretations	236
6.8	Magnetorotational Theory	237
6.8.1	Planar Short-Wavelength Self-gravitational Modes in a Thin Disc	239
6.8.2	Magnetorotational Instabilities in a Keplerian Disc	243
6.9	Resistive-g Instabilities	245
6.9.1	Uniform Magnetic Field	246
6.9.2	Sheared Magnetic Field	246
6.10	Resistive Tearing Instabilities	249

6.11	Effect of Plasma Viscosity on Stability	253
6.11.1	Magnetoviscous Stabilisation of Ideal and Resistive Instabilities	254
6.11.2	Enhanced Energy Release in Magnetic Reconnexion.	257
6.12	Hall Instability	259
6.12.1	Gravitational Interchange Instability in Ion-Electron Plasma.	260
6.12.2	Hall Effect in Kepler Disc Dynamics.	264
6.12.3	Hall Reconnexion	267
	Bibliography	268
	Glossary	271
	Index	275

Fundamental Fluid Mechanics and
Magnetohydrodynamics

Hosking, R.J.; Dewar, R.

2016, XIV, 279 p., Hardcover

ISBN: 978-981-287-599-0
