

Contents

- 1 Introduction: Features of a Smart Energy Network.** 1
 - 1.1 Climate Change Mitigation and Smart Grids 1
 - 1.2 Smart Policy and Regulation. 3
 - 1.3 Smart Planning/Operation Management 4
 - 1.4 Smart Network Topology (Transmission and Distribution):
Decentralized Microgrids 5
 - 1.5 Smart Generation. 7
 - 1.6 Smart Demand 8
 - 1.7 Smart Tariffs. 12
 - 1.8 Smart Appliances 16
 - References 17
- 2 Grid Revolution with Distributed Generation and Storage.** 19
 - 2.1 Distributed Energy Resources 19
 - 2.2 PV as the Pioneer DER: History and Role in Microgrids 22
 - 2.3 Energy Storage: History and Role in Microgrid. 27
 - 2.4 Nanogrids. 32
 - References 37
- 3 A Generic Framework for DGS Nanogrids** 41
 - 3.1 Problem Statement and Formulation. 41
 - 3.1.1 DGS System Sizing. 41
 - 3.1.2 Operation Scheduling of DGS System 49
 - 3.2 Case Study of a Grid-Connected Shopping Center 50
 - 3.3 Summary 58
 - References 59

4	PV-Battery Nanogrid Systems	61
4.1	Existing Knowledge of Integrated PV-Battery Systems	61
4.2	Case Studies	64
4.2.1	Evaluation of a PV-Battery System for a House	64
4.2.2	Evaluation of Battery System for a Hospital with Installed PV System	71
4.2.3	Operation of a PV-Battery System for a House	75
4.3	Summary	80
	References	81
5	Sensitivity Analysis of Grid-Connected PV-Battery Systems	83
5.1	Introduction	83
5.2	Base Case: Optimal Investment Decision for a House	83
5.3	Impact of Technology Size	86
5.4	Impact of Technology Price	88
5.5	Impact of Electricity Tariff Type	89
5.6	Impact of Electricity Price	89
5.7	Impact of Feed-in Tariff	90
5.8	Impact of Daily Consumption Pattern	91
5.9	Impact of Location and Load Seasonality	93
5.10	Summary	96
	References	96
6	The “Death Spiral” for the Utility Industry: A Myth or Reality?	99
	References	103
7	Economic Analysis of Leaving the Grid	105
7.1	Energy Security and Consumer Independence	105
7.2	Problem Statement and Formulation	107
7.2.1	Problem: Feasibility of Leaving the Grid with an Optimal PV-Battery System	107
7.2.2	Problem Formulation	109
7.3	Case Studies	113
7.3.1	Example 1	113
7.3.2	Example 2: Impact of Consumption Load	117
7.3.3	Example 3: Impact of Feed-in Tariff	120
7.3.4	Example 4: Impact of Technology Costs	122
7.3.5	Example 5: Impact of Geography	123
7.3.6	Example 6: PV-Battery Operation Performance	125
7.4	Summary and Policy Implications	128
	References	129

8 Noncooperative Community Energy Networks	131
8.1 High DG Penetration and Grid Stability	131
8.2 Scale-up of DGS Systems to Community Level	134
8.2.1 Problem Statement and Formulation	134
8.2.2 Study 1: A Feeder with Distributed PV/Battery	137
8.3 Operation Issues of Network with High DGS Penetration	140
8.3.1 Study 2: Impact of Battery Charge Regulation on the Grid	142
8.3.2 Study 3: Impact of Electricity Tariff Structure on Grid	143
8.4 Aggregation of Multiple Feeders	145
8.5 Summary and Policy Implications	146
References	148
9 Cooperative Community Energy Networks	151
9.1 Cooperative Community Energy Networks (Microgrid of Nanogrids)	151
9.2 Problem Statement and Formulation	155
9.2.1 Problem Definition	155
9.2.2 Problem Formulation	158
9.3 Case Studies	162
9.3.1 Network of Nine Homes	162
9.3.2 Various Community Electricity Prices	168
9.3.3 Various CEPs	170
9.3.4 Impact of Grid Electricity Tariffs	172
9.3.5 A Larger CCEN with 35 Members	172
9.3.6 A Building with Centralized DGS	178
9.4 Summary	181
References	182
Appendix	183

Community Energy Networks With Storage
Modeling Frameworks for Distributed Generation

Khalilpour, K.R.; Vassallo, A.

2016, XXXII, 191 p. 118 illus., Hardcover

ISBN: 978-981-287-651-5
