

Contents

1	Phenomenological Structure for the Large Deviation Principle	1
1.1	Statistical Mechanics	1
1.2	Large Deviation Functions and Thermodynamic Functions	2
1.3	Phenomenological Structure for the Large Deviation Principle . . .	4
1.4	Large Deviation Statistics of Time-Averaged Quantity in Non-equilibrium System	7
1.4.1	Towards a Rare Event Sampling Method in Real Experiments	7
1.4.2	Brute Force Approach to the Phenomenological Structure in Time-Series Statistics	9
1.4.3	What Will Be Developed in the Main Chapter of This Thesis	11
1.5	Towards Understanding Glass Transition in Terms of Thermodynamic Formalism	12
1.6	Application to van Zon–Cohen Extended Fluctuation Theorem—The Origin in Terms of Rare Trajectories	13
1.7	Construction of Thesis	14
	References	14
2	Iterative Measurement-Feedback Procedure for Large Deviation Statistics	17
2.1	Introduction	17
2.2	Preliminary	18
2.2.1	Model	18
2.2.2	Cumulant Generating Function	19
2.2.3	Biased Ensemble	20
2.2.4	Revisit of the Phenomenological Structure for the Large Deviation Principle in Equilibrium Statistical Mechanics	21
2.2.5	Steady Dynamics Corresponding to Biased Ensemble	22

2.3	Main Result.	25
2.3.1	Measurement Formula of $\phi(n)$ in Monte-Carlo Simulations.	25
2.3.2	Rare Events Required for Measurement of $\langle e^{hTA(\omega)} \rangle_n$	26
2.3.3	Renormalisation of Rare-Eventness via Measurements and Feedbacks.	27
2.3.4	Rare-Event Sampling Method Constituted of an Iterative Measurement-and-Feedback Procedure.	28
2.4	Applications	29
2.4.1	Effective Descriptions of Exponential Family	29
2.4.2	Asymmetric Simple Exclusion Process (ASEP)	30
2.4.3	Fredrickson–Andersen (FA) Model.	34
2.5	Conclusion	38
	References	38
3	Common Scaling Functions in Dynamical and Quantum Phase Transitions.	41
3.1	Introduction.	41
3.2	Finite-Size Structure in Mean-Field FA Model.	43
3.2.1	Preliminaries	43
3.2.2	Free Energy at $s = s_c$ and the Finite-Size Correction	50
3.2.3	Scaling Function Around $s = s_c$	55
3.3	Mean-Field Quantum Ferromagnet and the Scaling Function	64
3.3.1	Preliminary	64
3.3.2	Finite-Size Scaling.	68
3.4	Conclusions.	75
	References	76
4	van Zon–Cohen Singularity and a Negative Inverse Temperature	77
4.1	Introduction.	77
4.2	Set up.	79
4.2.1	Model	79
4.2.2	Biased Process and Cumulant Generating Functions.	81
4.2.3	Biased Distribution Function and Conditional Distribution Function	82
4.3	Results	84
4.3.1	Negative Inverse Temperature and the van Zon–Cohen Singularity	86
4.4	Derivation of the Results.	88
4.4.1	The Method of the Largest Eigenvalue Problem and the Cole–Hopf Transformation.	88
4.4.2	Boundary Layer Analysis in Large L Limit.	91
4.4.3	Derivation of the Main Results	93

Contents	xiii
4.5 Conclusions.	97
References	98
5 Conclusions and Future Perspectives.	99

Appendix A: For Chapter 2	103
Appendix B: For Chapter 3.	115
Appendix C: For Chapter 4	123
Curriculum Vitae	127

Phenomenological Structure for the Large Deviation
Principle in Time-Series Statistics
A method to control the rare events in non-equilibrium
systems
Nemoto, T.
2016, XIII, 127 p. 35 illus., 7 illus. in color., Hardcover
ISBN: 978-981-287-810-6
