

Contents

1 Introduction	1
1.1 Supplementary Problems	6
2 Elastic Material Behavior	9
2.1 Simple Load Cases	9
2.1.1 Uniaxial Tensile Test	9
2.1.2 Pure Shear Test	11
2.1.3 Hydrostatic Compression Test	13
2.2 Three-Dimensional Hooke's Law	14
2.3 Plane Stress and Plane Strain Case	18
2.3.1 Plane Stress Case	18
2.3.2 Plane Strain Case	19
2.4 Supplementary Problems	21
3 Elasto-Plastic Material Behavior	23
3.1 One-Dimensional Theory	23
3.1.1 Yield Condition	25
3.1.2 Flow Rule	26
3.1.3 Hardening Rule	28
3.1.4 Elasto-Plastic Modulus	32
3.1.5 Consideration of Unloading, Reversed Loading and Cyclic Loading.	35
3.2 Three-Dimensional Behavior.	36
3.2.1 Comments on the Stress Tensor	38
3.2.2 Graphical Representation of Yield Conditions.	44
3.2.3 Mises Yield Condition.	47
3.2.4 Tresca Yield Condition	50
3.3 Classical Failure and Fracture Hypotheses	52
3.3.1 Principal Stress Hypothesis	54
3.3.2 Principal Strain Hypothesis	55

3.3.3	Strain Energy Hypothesis.	56
3.3.4	Drucker-Prager Hypothesis.	57
3.4	Supplementary Problems	59
4	Continuum Damage Mechanics.	65
4.1	Representation of Damage and Experimental Approaches.	65
4.2	Lemaitre's Damage Model	73
4.3	Gurson's Damage Model	78
4.4	Supplementary Problems	82
5	Fracture Mechanics	85
5.1	Linear Fracture Mechanics	85
5.1.1	Stress Concentration	85
5.1.2	Stress Intensity—Crack-Tip Field	92
5.1.3	Test Methods for the Determination of the Fracture Toughness	98
5.1.4	Energy Release Rate	106
5.2	Elasto-Plastic Fracture Mechanics	113
5.2.1	J -Integral.	113
5.2.2	Determination of J_C	117
5.3	Supplementary Problems	119
	Appendix A: Mathematics.	129
	Appendix B: Mechanics.	137
