

Contents

Part I Introductory Matter

1 BioInformation Processing	3
1.1 The Proper Level of Abstraction.	4
1.2 The Threads of Our Tapestry	5
1.3 Chapter Guide	7
1.4 Theoretical Modeling Issues.	11
1.5 Code.	14
References	15

Part II Diffusion Models

2 The Diffusion Equation	19
2.1 The Microscopic Space–Time Evolution of a Particle	19
2.2 The Random Walk and the Binomial Distribution.	22
2.3 Rightward Movement Has Probability 0.5 or Less	24
2.3.1 Finding the Average of the Particles Distribution in Space and Time	25
2.3.2 Finding the Standard Deviation of the Particles Distribution in Space and Time	26
2.3.3 Specializing to an Equal Probability Left and Right Random Walk	28
2.4 Macroscopic Scale	28
2.5 Obtaining the Probability Density Function	30
2.5.1 p Less Than 0.5	31
2.5.2 p and q Are Equal	32
2.6 Understanding the Probability Distribution of the Particle	33
2.7 The General Diffusion Equation	34
References	37

3	Integral Transforms	39
3.1	The Laplace Transform	39
3.1.1	Homework	40
3.2	The Fourier Transform	41
3.2.1	Homework	44
4	The Time Dependent Cable Solution	45
4.1	The Solution for a Current Impulse	46
4.1.1	Modeling the Current Pulses	46
4.1.2	Scaling the Cable Equation	47
4.1.3	Applying the Laplace Transform in Time	49
4.1.4	Applying the Fourier Transform in Space	50
4.1.5	The \mathcal{F} Transform of the Pulse	50
4.1.6	The Idealized Impulse \mathcal{F} Transform Solution	51
4.1.7	Inverting the \mathcal{F} Transform Solution	51
4.1.8	A Few Computed Results	53
4.1.9	Reinterpretation in Terms of Charge	54
4.2	The Solution to a Constant Current	55
4.3	Time Dependent Solutions	57
	Reference	58

Part III Neural Systems

5	Mammalian Neural Structure	61
5.1	The Basic Model	61
5.2	Brain Structure	69
5.3	The Brain Stem	69
5.4	Cortical Structure	74
5.4.1	Cortical Processing	76
5.4.2	Isocortex Modeling	77
	References	81
6	Abstracting Principles of Computation	83
6.1	Cellular Triggers	83
6.2	Dynamical Loop Details	86
6.3	An Implication for Biological Computation	90
6.4	Transport Mechanisms and Switches	91
6.5	Control of a Substance via Creation/Destruction Patterns	94
6.6	Calcium Ion Signaling	96
6.7	Modulation Pathways	101
6.7.1	Ligand—Receptor Response Strategies	102
	References	105

7	Second Messenger Diffusion Pathways	107
7.1	Calcium Diffusion in the Cytosol	107
7.1.1	Assumption One: Calcium Binding Is Fast	110
7.1.2	Assumption Two: Binding Rate Is Much Less Than Disassociation Rate	112
7.2	Transcriptional Control of Free Calcium	114
	References	116
8	Second Messenger Models	117
8.1	Generic Second Messenger Triggers	117
8.1.1	Concatenated Sigmoid Transitions	121
8.2	A Graphic Model Computation Model	122
8.3	Ca^{++} Triggers	125
8.4	Spatially Dependent Calcium Triggers	126
8.5	Calcium Second Messenger Pathways	128
8.6	General Pharmacological Inputs	130
8.6.1	7 Transmembrane Regions	131
8.6.2	4 Transmembrane Regions	132
8.6.3	Family Two: The Agonist Spectrum	132
8.6.4	Allosteric Modulation of Output	133
8.7	Neurotransmitter Effects	133
	Reference	136
9	The Abstract Neuron Model	137
9.1	Neuron Inputs	137
9.2	Neuron Outputs	139
9.3	Abstract Neuron Design	141
9.3.1	Toxin Recognition	143
9.4	Feature Vector Abstraction	151
9.4.1	The BFV Functional Form	152
9.4.2	Modulation of the BFV Parameters	155
9.4.3	Modulation via the BFV Ball and Stick Model	156
9.5	The Full Abstract Neuron Model	169
	References	171

Part IV Models of Emotion and Cognition

10	Emotional Models	175
10.1	The Sloman Emotional Model	179
10.2	PsychoPhysiological Data	180
	References	182
11	Generation of Music Data: J. Peterson and L. Dzuris	183
11.1	A Musical Grammar	183
11.2	The Würfelspiel Approach	186

11.3	Neutral Music Data Design	187
11.3.1	Neutral Musical Alphabet Design	187
11.3.2	The Generated Musical Phrases	189
11.4	Emotional Musical Data Design	191
11.4.1	Emotion and Music.	191
11.4.2	Emotional Music Data Design	195
11.4.3	<i>Happy</i> Musical Data	196
11.4.4	<i>Sad</i> Musical Data	197
11.4.5	<i>Angry</i> Musical Data	199
11.4.6	Emotional Musical Alphabet Selection	201
	References	203
12	Generation of Painting Data: J. Peterson, L. Dzuris and Q. Peterson	205
12.1	Developing a Painting Model.	205
12.2	Neutral Painting Data	210
12.2.1	The Neutral Künstlerisches Würfelspiel Approach	211
12.3	Encoding the Painting Data	212
12.4	Emotionally Labeled Painting Data.	216
12.4.1	Painting and Emotion in the Literature	216
12.4.2	The Emotional Künstlerisches Würfelspiel Approach	220
	References	225
13	Modeling Compositional Design	227
13.1	The Cognitive Dysfunction Model Review.	228
13.2	Connectionist Based Compositional Design	231
13.2.1	Preprocessing.	231
13.2.2	Noun to Verb Processing.	234
13.2.3	Sentence Construction.	236
13.3	Neurobiologically Based Compositional Design	237
13.3.1	Recalling Data Generation	237
13.3.2	Training the Isocortex Model	239
13.3.3	Sensor Fusion in Area 37	241
13.4	Integration of the Models	242
13.5	Depression Models	244
13.6	Integration into a Virtual World	245
13.7	Lesion Studies	247
13.8	The Complete Cognitive Model	248
13.9	Virtual World Constructions	249
	References	250
14	Networks of Excitable Neurons.	251
14.1	The Basic Neurotransmitters	251
14.2	Modeling Issues	254
14.3	Software Implementation Thoughts.	256

14.4	How Would We Code Synapse Interaction?	259
14.4.1	The Catecholamine Abstraction	260
14.4.2	PSD Computation	263
14.5	Networks of Neural Objects	264
14.5.1	Chained Architecture Details	264
14.5.2	Modeling Neurotransmitter Interactions	270
14.6	Neuron Calculations	272
	References	276
15	Training the Model	277
15.1	The OCOS DAG	277
15.1.1	Some MatLab Comments	280
15.2	Homework	281
15.3	Final Comments	281
	References	284

Part V Simple Abstract Neurons

16	Matrix Feed Forward Networks	287
16.1	Introduction	287
16.2	Minimizing the MFFN Energy	290
16.3	Partial Calculations for the MFFN	291
16.3.1	The Last Hidden Layer	291
16.3.2	The Remaining Hidden Layers	292
16.4	The Full Backpropagation Equations for the MFFN	295
16.5	A Three Layer Example	296
16.5.1	The Output Layer	296
16.5.2	The Hidden Layer	297
16.5.3	The Input Layer	297
16.6	A MatLab Beginning	298
16.7	MatLab Implementations	301
16.7.1	Initialization	301
16.7.2	Evaluation	302
16.7.3	Updating	303
16.7.4	Training	308
16.8	Sample Training Sessions	309
16.8.1	Approximating a Step Function	309
16.8.2	Approximating \sin^2	311
16.8.3	Approximating \sin^2 Again: Linear Outputs	312
	Reference	314
17	Chained Feed Forward Architectures	315
17.1	Introduction	315
17.2	Minimizing the CFFN Energy	319
17.3	Partial Derivative Calculation in Generalized Chains	319

17.4	Partial Calculations for the CFFN	324
17.4.1	The $\frac{\partial Y^j}{\partial Y^i}$ Calculation	326
17.4.2	The Internal Parameter Partial Calculations	326
17.5	Simple MatLab Implementations	328
	References	330

Part VI Graph Based Modeling In Matlab

18	Graph Models	333
18.1	Building Global Graph Objects One	337
18.1.1	Vertices One	340
18.1.2	Edges One	342
18.1.3	A First Graph Class	344
18.2	Adding Class Methods First Pass	345
18.2.1	Adding Edge Methods	345
18.2.2	Adding Vertices Methods	346
18.2.3	Adding Graph Methods	346
18.2.4	Using the Methods	348
18.2.5	Adding a Graph to an Existing Graph	351
18.2.6	Drawing Graphs	353
18.2.7	Evaluation and Update Strategies	356
18.3	Training	360
18.4	Polishing the Training Code	371
18.5	Comparing the CFFN and MFFN Code	379
18.6	Handling Feedback	381
18.7	Lagged Training	390
18.8	Better Lagged Training!	401
18.9	Improved Gradient Descent	406
	References	414
19	Address Based Graphs	417
19.1	Graph Class Two	420
19.1.1	Vertices Two	421
19.1.2	Edges Two	423
19.1.3	Graph Class	425
19.2	Class Methods Two	430
19.2.1	Add Location Methods	430
19.2.2	Add Edge Methods	431
19.2.3	Add Node Methods	431
19.2.4	Finding the Incidence Matrix	432
19.2.5	Get the Laplacian	441
19.3	Evaluation and Update Strategies in Graphs	441
19.4	Adding Inhibition	449

20 Building Brain Models	461
20.1 Build A Cortex Module	461
20.1.1 Build A Cortical Can	462
20.1.2 Build A Cortical Column	464
20.1.3 Build A Cortex Sheet	467
20.2 Build A Thalamus Module	471
20.3 Build A MidBrain Module	474
20.4 Building the Brain Model	477
Reference	491

Part VII Models of Cognition Dysfunction

21 Models of Cognitive Dysfunction	495
21.1 Cognitive Modeling	495
21.1.1 Training Algorithms	499
21.2 Information	499
21.2.1 Laplacian Updates	499
21.2.2 Module Updates	501
21.2.3 Submodule Two Training	504
21.2.4 Submodule One Training	507
21.3 A Normal Brain Model	508
21.3.1 The Cognitive Dysfunction Model	513
References	515

Part VIII Conclusions

22 Conclusions	519
References	521

Part IX Background Reading

23 Background Reading	525
23.1 The Central Nervous System	525
23.2 Information Theory, Biological Complexity and Neural Circuits	526
23.3 Nervous System Evolution and Cognition	526
23.4 Comparative Cognition	527
23.5 Neural Signaling	530
23.6 Gene Regulatory Circuits	530
23.7 Software	531
23.8 Theoretical Robotics	533
References	533
