

Contents

Part I Introduction

1	Introductory Remarks	3
1.1	Our Design Philosophy	5
1.2	Insights from Other Fields	7
1.3	How Should You Study?	9
1.4	Code	12
1.5	Some Glimpses of Modeling	13
1.5.1	West Nile Virus Models	14
1.5.2	Simple Brain Models	15
1.5.3	A Cancer Model	17
1.6	A Roadmap to the Text	18
1.7	Final Thoughts	22
	References	22

Part II Using One Variable

2	Viability Selection	25
2.1	A Basic Evolutionary Model	25
2.1.1	Examples	27
2.1.2	Homework	28
2.2	The Next Generation	28
2.2.1	Examples	30
2.2.2	Homework	30
2.3	A Difference Equation	31
2.3.1	Examples	32
2.3.2	Homework	33
2.4	The Functional Form of the Frequency	33
2.4.1	Examples	35
2.4.2	Homework	36
2.4.3	Biology and the Model	37

2.5	A Gentle Introduction to MatLab	39
2.5.1	Matlab Vectors.	40
2.5.2	Graphing a Function	43
2.5.3	A Simple Virus Infection Model.	45
2.6	Long Term Consequences	51
2.7	The Domestication of Wheat	52
2.7.1	Project	58
	References	60
3	Limits and Basic Smoothness	61
3.1	Limits.	64
3.1.1	The Humble Square Root	64
3.1.2	A Cool Polynomial Trick	66
3.1.3	Change and More Change!	69
3.1.4	How Many Do We Have?	71
3.1.5	This Function Is Smooth!	76
4	Continuity and Derivatives	79
4.1	Continuity.	79
4.1.1	Example	82
4.1.2	Homework.	84
4.2	Differentiability	85
4.2.1	Example	87
4.2.2	Homework.	88
4.3	Simple Derivatives	89
4.3.1	Examples.	92
4.3.2	Homework.	92
4.4	The Quotient Rule	93
4.4.1	Examples.	95
4.4.2	Homework.	96
4.5	Chain Rule	97
4.5.1	Examples.	99
4.5.2	Homework.	99
5	Sin, Cos and All That.	101
5.1	Sin, Cos and All That!	101
5.1.1	The Sin and Cos Functions	101
5.2	A New Power Rule	106
5.2.1	Examples.	107
5.2.2	Homework.	107
5.3	Derivatives of Complicated Things.	108
6	Antiderivatives.	113
6.1	Simple Integer Power Antiderivatives	113
6.1.1	Examples.	115
6.1.2	Homework.	116

6.2	Simple Fractional Power Antiderivatives	116
6.2.1	Examples.	118
6.2.2	Homework.	118
6.3	Simple Trigonometric Function Antiderivatives	119
6.3.1	Examples.	119
6.3.2	Homework.	120
7	Substitutions	121
7.1	Simple Substitution Polynomials	121
7.2	Substitution for Polynomials Quick and Dirty	125
7.2.1	Homework.	126
7.3	Sin's and Cos's	127
7.3.1	Examples.	127
7.3.2	Homework.	128
8	Riemann Integration	129
8.1	Riemann Sums.	129
8.1.1	Examples.	133
8.1.2	Homework.	133
8.2	Riemann Sums in MatLab.	134
8.2.1	Homework.	135
8.3	Graphing Riemann Sums.	137
8.3.1	Automating Riemann Sums	141
8.3.2	Uniform Partition Riemann Sums	145
8.4	Riemann Integrals	148
8.4.1	The Riemann Integral as a Limit	149
8.4.2	Properties	150
8.5	The Fundamental Theorem of Calculus.	152
8.6	The Cauchy Fundamental Theorem of Calculus	155
8.6.1	Examples.	157
8.6.2	Homework.	158
8.7	Riemann Integration with Substitution.	158
8.7.1	Homework.	159
8.8	Integration with Jumps	160
8.8.1	Removable Discontinuity.	160
8.8.2	Jump Discontinuity.	162
8.8.3	Homework.	163
9	The Logarithm and Its Inverse	165
9.1	The Natural Logarithm Function	165
9.2	Logarithm Functions.	167
9.2.1	Worked Out Examples: Derivatives	168
9.2.2	Homework: Derivatives.	169
9.2.3	Worked Out Examples: Integrals	170
9.2.4	Homework: Integrals.	171

9.3	The Exponential Function	171
9.4	Exponential Functions.	173
9.4.1	Worked Out Examples: Derivatives	173
9.4.2	Homework: Exponential Derivatives	174
9.4.3	Worked Out Examples: Exponential Integrals.	175
9.4.4	Homework: Exponential Integrals	176
9.5	Our Antiderivatives So Far	177
10	Exponential and Logarithm Function Properties	179
10.1	Positive Integer Powers of e	179
10.1.1	Homework.	181
10.2	Negative Integer Powers of e	182
10.2.1	Homework.	184
10.3	Adding Natural Logarithms	185
10.3.1	Adding Logarithms: Both Logarithms are Bigger Than 1	185
10.3.2	Adding Logarithms: One Logarithm Less Than 1 and One Bigger Than 1	188
10.3.3	Generalizing These Results	190
10.3.4	Doing Subtracts in General	190
10.4	Fractional Powers.	191
10.5	The Logarithm Function Properties.	193
10.5.1	Homework.	195
10.6	The Exponential Function Properties.	195
10.6.1	Properties of the Exponential Function	198
10.6.2	Homework.	204
11	Simple Rate Equations	205
11.1	Solving a Simple Rate Problem: Indefinite Approach	209
11.1.1	Resolution of the Absolute Value	211
11.1.2	Examples.	211
11.1.3	Homework.	213
11.2	Solving a Simple Rate Problem: Definite Approach	214
11.2.1	Examples.	215
11.2.2	Homework.	217
11.3	The Half Life in Exponential Decay Problems	218
11.4	The Carbon Dating Problem	222
11.4.1	A Simple Dating Problem	223
11.4.2	Homework.	223
11.4.3	Further Caveats	224
11.5	Simple Rate Problems with Jumps	224
11.5.1	Homework.	227
	References	227

12 Simple Protein Models	229
12.1 The Integrating Factor Approach	229
12.1.1 Examples	230
12.1.2 Homework	232
12.2 The Integrating Factor Approach with a Constant on the Right	232
12.2.1 Homework	235
12.3 Protein Synthesis	235
12.3.1 The Underlying Biology	237
12.3.2 Worked Out Examples	240
12.3.3 Homework	243
12.4 The Response Time in Protein Synthesis Problems	244
12.4.1 Homework	246
12.5 Signal On and Off Scenarios	247
12.5.1 Homework	248
12.6 Transcription Error Rates	250
12.6.1 A First Attempt to Explain the Error Rate	251
12.6.2 The Second Attempt: Kinetic Proofreading	253
13 Logistics Models	257
13.1 The Model	257
13.1.1 An Integration Side Trip: Partial Fraction Decompositions	258
13.1.2 Examples	260
13.2 The General Solution Method	266
13.2.1 A Streamlined Solution	272
13.3 Solving a Logistics Model on Paper	274
13.3.1 Homework	274
Reference	277
14 Function Approximation	279
14.1 Taylor Polynomials	279
14.1.1 Fundamental Tools	280
14.2 The Zeroth Order Taylor Polynomial	282
14.2.1 Examples	283
14.2.2 Homework	283
14.3 The First Order Taylor Polynomial	284
14.3.1 Examples	286
14.3.2 Homework	289
14.4 Quadratic Approximations	289
14.4.1 Examples	290
14.4.2 Homework	292
14.5 Exponential Approximations	295
14.5.1 Example	297
14.5.2 Homework	298

15	Extreme Values	301
15.1	Extremal Values.	301
15.1.1	Example	302
15.1.2	Homework.	303
15.2	The Newton Cooling Project	303
15.2.1	Homework.	305
15.2.2	Your Newton Cooling Project	305
15.2.3	Your Report.	308
15.2.4	Some Sample Calculations.	309
16	Numerical Methods Order One ODEs.	315
16.1	Euler's Method	315
16.1.1	Approximating the Solution to First Order Differential Equations	317
16.1.2	Euler Approximates Again.	321
16.1.3	Euler Approximates the Last Time	324
16.1.4	Euler's Algorithm.	329
16.1.5	Adding Time to Euler's Method.	331
16.1.6	Simple MatLab Experiments	332
16.1.7	Matlab Euler Functions	335
16.1.8	Homework.	336
16.1.9	The True Versus the Euler Approximate Solution...	337
16.1.10	Homework.	340
16.2	Runge-Kutta Methods.	340
16.2.1	The MatLab Implementation	341
16.2.2	Homework.	345
	References	345
17	Advanced Protein Models.	347
17.1	Binding Time Estimates	347
17.2	The Bound Fraction	349
17.2.1	Example	352
17.2.2	Homework.	352
17.3	Transcription Regulation	352
17.3.1	Example	356
17.3.2	Homework.	359
17.4	Simple Regulations.	359
17.4.1	Example	362
17.4.2	Homework.	362
17.5	Feedback Loops.	363
17.5.1	Examples.	366
17.5.2	Homework.	367
	References	368

Part III Using Multiple Variables

18	Matrices and Vectors	371
18.1	Matrices	371
18.1.1	The Zero Matrices	372
18.1.2	Square Matrices	373
18.1.3	The Identity Matrices	373
18.1.4	The Transpose of a Matrix.	374
18.1.5	Homework.	375
18.2	Operations on Matrices	375
18.2.1	Homework.	377
18.3	Vectors	378
18.4	Operations on Vectors	379
18.5	The Magnitude of a Vector	379
18.5.1	Homework.	382
18.5.2	Some Matrix–Vector Calculations.	382
18.6	The Inner Product of Two Column Vectors	383
18.6.1	Homework.	384
19	A Cancer Model	385
19.1	Two Allele TSG Models	387
19.2	Model Assumptions	391
19.3	Solving the Top Pathway Exactly	392
19.3.1	The $X_0 - X_1$ Subsystem.	392
19.3.2	Solving for X_2	393
19.4	Approximation of the Top Pathway	394
19.4.1	Approximating X_0 .	394
19.4.2	Approximating X_1 .	395
19.4.3	Approximating X_2 .	396
	References	398
20	First Order Multivariable Calculus	399
20.1	Functions of Two Variables.	399
20.1.1	Drawing an Annotated Surface.	400
20.1.2	Homework.	406
20.2	Continuity	406
20.3	Partial Derivatives	408
20.3.1	Homework.	414
20.4	Tangent Planes	416
20.4.1	The Tangent Plane to a Surface	416
20.4.2	Examples.	418
20.4.3	Homework.	419
20.4.4	Computational Results.	419
20.4.5	Homework.	421

20.5	Derivatives in Two Dimensions!	421
20.6	The Chain Rule	425
20.6.1	Examples.	426
20.6.2	Homework.	427
21	Second Order Multivariable Calculus	429
21.1	Tangent Plane Approximation Error	429
21.2	Second Order Error Estimates	430
21.2.1	Examples.	431
21.2.2	Homework.	432
21.3	Hessian Approximations	432
21.3.1	Ugly Error Estimates!	433
21.3.2	Homework.	436
21.4	Extrema Ideas	437
21.4.1	Examples.	440
21.4.2	Homework.	442
21.5	A Regression to Regression.	442
21.5.1	Example	447
21.5.2	Homework.	447
21.6	Regression and Covariances	449
21.6.1	Example	450
21.6.2	Homework.	451
	Reference	452
22	Hamilton's Rule in Evolutionary Biology.	453
22.1	How Do We Define Altruism	454
22.1.1	A Shared Common Good Model	454
22.1.2	The Abstract Version	457
22.2	Hamilton's Rule.	461
22.2.1	Example	464
22.2.2	Homework.	464
22.3	Gene Survival	464
22.3.1	Back to Covariance!	466
22.4	Altruism Spread Under Additive Fitness	467
22.4.1	Example	469
22.4.2	Homework.	469
22.5	Altruism Spread Under Additive Genetics	469
22.5.1	Examples.	472
22.5.2	Homework.	473
22.6	The Optimization Approach.	473
22.6.1	Example	474
22.6.2	Homework.	474
