

Contents

Part I Introductory Matter

1	Introduction.	3
1.1	Chapter Guide	6
1.2	Code.	8
	References	9

Part II Quantitative Tools

2	Graham–Schmidt Orthogonalization	13
2.1	Numerical Integration	13
2.1.1	Evaluating S_{mk}	18
2.1.2	Homework.	19
2.1.3	Matlab Implementation	20
2.1.4	Run Time Output	21
2.2	Linearly Independent Functions	22
2.2.1	Functions.	24
2.2.2	Homework.	26
2.3	Vector Spaces and Basis	27
2.4	Inner Products	29
2.5	Graham–Schmidt Orthogonalization	32
2.5.1	Making It Formal	41
2.5.2	General MatLab GSO	41
	Reference	46
3	Numerical Differential Equations	47
3.1	Approximating Solutions Numerically	47
3.1.1	Expansions of F	48
3.1.2	Minimizing Error	50
3.1.3	The Matlab Implementation	52

3.2	Runge–Kutta Fehlberg Methods	53
3.2.1	The RKF5 Flowchart.	54
3.2.2	Runge–Kutta Fehlberg MatLab Implementation	56
	References	61

Part III Deriving the Cable Model

4	Biological Molecules	65
4.1	Molecular Bonds	65
4.1.1	Bond Comparisons	68
4.2	Energy Considerations.	68
4.3	Hydrocarbons.	71
4.4	Amino Acids	72
4.5	Peptide Bonds	80
4.6	Chains of Amino Acids.	84
4.7	Nucleic Acids	85
4.7.1	Sugars.	85
4.7.2	Nucleotides	87
4.7.3	Complementary Base Pairing	91
4.8	Making Proteins.	94
5	Ion Movement	97
5.1	Membranes in Cells	97
5.2	The Physical Laws of Ion Movement	99
5.2.1	Ficke’s Law of Diffusion	99
5.2.2	Ohm’s Law of Drift	100
5.2.3	Einstein’s Relation	101
5.2.4	Space Charge Neutrality	101
5.2.5	Ions, Volts and a Simple Cell.	102
5.3	The Nernst–Planck Equation	103
5.4	Equilibrium Conditions: The Nernst Equation	105
5.4.1	An Example.	106
5.5	One Ion Nernst Computations in MatLab	108
5.5.1	Homework.	109
5.6	Electrical Signaling.	110
5.6.1	The Cell Prior to K Gates	110
5.6.2	The Cell with K^+ Gates.	111
5.6.3	The Cell with NaCl Inside and Outside Changes. . . .	112
5.6.4	The Cell with Na^+ Gates	113
5.6.5	The Nernst Equation for Two Ions	113
5.6.6	The Nernst Equation for More Than Two Ions	115
5.6.7	Multiple Ion Nernst Computations in MatLab.	117

5.7	Ion Flow	119
5.7.1	Transport Mechanisms	119
5.7.2	Ion Channels	120
5.7.3	Active Transport Using Pumps	124
5.7.4	A Simple Compartment Model	125
5.8	Movement of Ions Across Biological Membranes	128
5.8.1	Membrane Permeability	128
5.8.2	The Goldman–Hodgkin–Katz (GHK) Model.	132
5.8.3	The GHK Voltage Equation	136
5.8.4	Examples	138
5.8.5	The Effects of an Electrogenic Pump	140
5.9	Excitable Cells	142
	References	147
6	Lumped and Distributed Cell Models	149
6.1	Modeling Radial Current	149
6.2	Modeling Resistance	151
6.3	Longitudinal Properties	152
6.4	Current in a Cable with a Thin Wall	153
6.5	The Cable Model	156
6.5.1	The Core Conductor Model Assumptions	157
6.5.2	Building the Core Conductor Model	160
6.6	The Transient Cable Equations	163
6.6.1	Deriving the Transient Cable Equation	164
6.6.2	The Space and Time Constant of a Cable	166
7	Time Independent Solutions to Infinite Cables	171
7.1	The Infinite Cable	171
7.2	Solving the Time Independent Infinite Cable Equation	172
7.2.1	Variation of Parameters	173
7.3	Modeling Current Injections	181
7.3.1	Continuity in the Solution	182
7.3.2	Continuity in the Derivative	183
7.3.3	Forcing Continuity at the Boundaries	183
7.4	Modeling Instantaneous Current Injections	185
7.4.1	What Happens Away from 0?	186
7.4.2	What Happens at Zero?	188
7.5	Idealized Impulse Currents	189
7.5.1	Integrals of Impulse Functions	192
7.6	The Inner and Outer Current Solutions	192
7.7	The Inner and Outer Voltage Solutions	195
7.8	Summarizing the Infinite Cable Solutions	196
7.8.1	Homework	197

8 Time Independent Solutions to Finite and Half-Infinite

Space Cables	199
8.1 The Half-Infinite Cable Solution	199
8.2 The Finite Cable Solution: Current Initialization	202
8.2.1 Parametric Studies	207
8.2.2 Some MatLab Implementations	207
8.2.3 Run-Time Results	210
8.2.4 Homework	210
8.3 The Finite Cable: Voltage Initialization	211
8.3.1 Homework	213
8.4 Synaptic Currents	214
8.4.1 A Single Impulse	216
8.4.2 Forcing Continuity	218
8.4.3 The Limiting Solution	220
8.4.4 Satisfying Boundary Conditions	221
8.4.5 Some Results	222
8.5 Implications	222

Part IV Excitable Neuron Models

9 A Primer on Series Solutions	229
9.1 The Separation of Variables Method	229
9.1.1 Determining the Separation Constant	231
9.2 Infinite Series	235
9.2.1 Simple Limits from Calculus	235
9.2.2 Sequences	238
9.2.3 Series of Positive Terms	239
9.2.4 Series of Functions	241
9.2.5 Fourier Series	243
9.3 The Cable Model Infinite Series Solution	244
9.3.1 Homework	245
9.4 The Membrane Voltage Cable Equation	246
9.5 Fourier Series Components	248
9.5.1 Orthogonal Functions	248
9.6 The Convergence of Fourier Series	254
9.6.1 Rewriting $\mathcal{S}_N(x)$	256
9.6.2 Rewriting $\mathcal{S}_N - F$	258
9.6.3 Convergence	259
9.7 Fourier Sine Series	262
9.8 Fourier Cosine Series	263
9.9 MatLab Implementation	265
9.9.1 Inner Products Revisited	265
9.9.2 Fourier Cosine and Sine Approximation	270
9.9.3 Testing the Approximations	273
9.9.4 Cable Membrane Approximations	277

9.10	Convergence Analysis for the Cable Equation	282
9.10.1	Uniform Convergence Ideas	283
9.10.2	A Fourier Series Example	286
9.10.3	Uniform Convergence for f	289
9.10.4	Extending to Fourier Sin and Fourier Cosine Series	296
9.10.5	Back to Convergence of the Cable Solution	300
	Reference	308
10	Linear Partial Differential Equations.	309
10.1	The Separation of Variables Method Revisited	310
10.1.1	The Wave Equation	310
10.1.2	Laplace's Equation	318
10.1.3	The Heat/Diffusion Equation	326
10.2	Fourier Series Approximate Methods	331
10.2.1	The Wave Equation	331
10.2.2	Laplace's Equation	342
10.2.3	The Heat Equation	350
	Reference	359
11	Simplified Dendrite—Soma—Axon Information Processing	361
11.1	A Simple Model of a Dendrite: The Core Conductor Model	363
11.2	Time Independent Solutions to the Cable Model.	367
11.3	The Dendritic Voltage Model.	369
11.4	The Ball and Stick Model	371
11.5	Ball-Stick MatLab Solutions	375
11.5.1	Approximating the Solution	376
11.5.2	Applied Voltage Pulses	379
11.6	Ball and Stick Numerical Solutions.	380
11.6.1	Root Finding and Simple Optimization	381
11.6.2	The Ball and Stick Matrix Construction.	384
11.6.3	Solving for Impulse Voltage Sources.	388
11.7	Ball Stick Project	397
	References	399
12	The Basic Hodgkin–Huxley Model	401
12.1	Adding Ion Membrane Currents	405
12.2	The Hodgkin–Huxley Gates.	405
12.2.1	Activation and Inactivation Variables	408
12.3	The Voltage Clamped Protocol.	408
12.4	The Hodgkin–Huxley Sodium and Potassium Model.	409
12.4.1	Encoding the Dynamics.	411
12.5	Computing the Solution Numerically.	414

12.6	The Simple MatLab Implementation	415
12.6.1	Managing the Simulation: SolveSimpleHH.m	416
12.6.2	Gate Code	416
12.6.3	Setting Ion Currents to Zero: Rest.m	424
12.6.4	The Runge–Kutta Manager: HHFixedRK.m	426
12.6.5	A Simple External Current: IE.m	427
12.6.6	Runtime Results	428
12.7	Printing Additional Variables	434
12.7.1	The New Dynamics Function: simpleHHnew.m	434
12.7.2	The New Manager: SolveSimpleHHnew.m.	435
12.7.3	The New Runge–Kutta Manager: HHFixedRKnew.m	437
12.7.4	Runtime Results	437
12.8	Initiation of the Action Potential.	439
12.9	Homework.	441
12.10	Another MatLab Implementation	443
12.10.1	The Rewritten Dynamics	447
12.10.2	A New SolveSimpleHH.m	451
12.11	More Action Potentials	453
12.11.1	Exercise.	460
12.12	Action Potential Dynamics.	462
12.12.1	Multiple Pulses.	468
12.12.2	Generating Action Potentials for Sequences of Pulses	474
12.12.3	Simulating Second Messenger Activity	482
	References	484

Part V Summing It All Up

13	Final Thoughts.	487
	References	488

Part VI Advise to the Beginner

14	Background Reading	491
14.1	Biology and Physiology	491
14.2	Theoretical Biology	492
14.3	Software	493
	References	494

Glossary	497
