

Contents

Part I Fundamentals

1 Diffusion	3
1.1 Introduction	3
1.2 A Rigorous Approach	5
1.3 Diffusivity	6
1.4 Local Analysis of Mass Transport Phenomena and Evaluation of the Concentration Profiles	8
1.5 Diffusion Characteristic Time	10
1.6 Diffusion and Chemical Reaction	11
1.6.1 Diffusion and Reaction in Series	12
1.6.2 Diffusion and Reaction in Parallel	14
1.6.3 Oxygen Transport to Tissue	15
1.7 Diffusion and Convection	19
2 Mass Transfer Coefficient	23
2.1 Introduction	23
2.2 Definition of Mass Transport Coefficients	24
2.3 Evaluation of Mass Transport Coefficient	25
2.4 Mass Transfer Between Two Phases	27
3 Membrane Operations	33
3.1 Introduction	33
3.2 Phenomenological Aspects and Definitions	34
3.2.1 Membrane Types	34
3.2.2 Membrane Separation Processes	35
3.2.3 Flow Patterns	37
3.2.4 Membrane Modules	38
3.2.5 Osmosis, Osmotic Pressure, and Reverse Osmosis	39

3.3	Mass Transport Through the Membrane	42
3.3.1	Flux Definitions.	42
3.3.2	Fluxes, Driving Forces, and Transport Properties of the Membrane	43
3.4	Physical Models for Membrane Transport Properties	45
3.4.1	Solution-Diffusion Model	45
3.4.2	Pore Flow Model.	48
3.5	Mass Transport in the Bulk Solution	49
3.5.1	Mass Transport in the Bulk Solution in Dialysis	50
3.5.2	Membrane Polarization.	52
3.6	Gas Permeation Through Membrane	53
3.6.1	Solution-Diffusion Model for Gas Permeation	54
3.6.2	Gas Flow Through Porous Membranes	55
4	Adsorption	59
4.1	Introduction	59
4.2	Adsorptive Media	60
4.3	Adsorption Isotherms	62
4.4	Mass Transfer Kinetics.	66
4.4.1	External and Intraparticle Mass Transfer Resistances.	67
4.4.2	Linear Driving Force Model	69
4.5	Fixed-Bed Adsorption	70
4.5.1	Model of a Fixed-Bed Adsorption Column with Liquid Feed	72
4.5.2	Analysis of Breakthrough Curves.	76
5	Bioreactors	83
5.1	Introduction	83
5.2	Kinetics of Enzymatic Reactions	85
5.3	Deviations from Michaelis–Menten Kinetics	87
5.4	Mass Balance in a Well-Mixed Batch Enzymatic Reactor	88
5.5	Enzymatic Reactions with Entrapped Enzymes	89
5.5.1	Kinetics of Enzymatic Reactions with Immobilized Enzymes.	90
5.5.2	Partition Effects	91
5.5.3	Effect of the External Diffusion	91
5.5.4	Enzymes Entrapped in Microcapsules or Hollow Fibers	94
5.5.5	Internal Diffusion.	96
5.6	Bioreactor for Cell Cultures	100
5.6.1	Kinetics of Cell Growth and of Product Formation.	101
5.6.2	Kinetics of Cell Cultures with Immobilized Cells.	103
5.6.3	Immobilization of Cells on Microporous Membranes	106

5.7	Types of Bio-Reactors	111
5.8	An Overview of Bioreactors for Tissue Engineering	112

Part II Artificial Organs

6	Blood Oxygenators and Artificial Lungs	117
6.1	Introduction	117
6.2	Structure and Function of Respiratory System	118
6.3	Extracorporeal Gas Exchange Devices in Clinical Practice.	119
6.4	General Remarks on Blood Oxygenator Design	121
6.5	Development of Blood Oxygenators: History and Current Solutions.	123
6.6	Fundamentals of Gas Exchange	127
6.6.1	Gas Solubility in Blood	127
6.6.2	Gas Transport in Blood	133
6.7	Gas Exchange Between Capillary Blood and Alveolar Air	135
6.8	Gas Exchange in Membrane Oxygenator	139
6.8.1	Membranes for Gas Oxygenators	140
6.8.2	Gas Transport in the Blood Film	143
6.9	Membrane Oxygenator Modeling.	144
6.9.1	Countercurrent Blood Oxygenator	146
6.9.2	Hollow Fiber Oxygenator with Radial Blood Flow	148
6.9.3	Response of the Membrane Oxygenator to Different Operating Conditions	148
6.10	Current Research and Perspectives	150
6.10.1	Extracorporeal Lung Assist (ECLA).	150
6.10.2	Paracorporeal or Intrathoracic Devices	153
6.10.3	Intravenous Devices	155
6.10.4	Microfluidic Devices	157
7	Artificial Kidney	163
7.1	Introduction	163
7.2	Structure and Function of Renal System	164
7.3	Renal Diseases and Medical Requirements for a Renal Replacement Therapy	167
7.4	Historical Development of Artificial Kidney	169
7.5	Membrane-Based Processes for Renal Replacement Therapies	172
7.5.1	Hemodialysis (HD)	172
7.5.2	Hemofiltration (HF)	174
7.5.3	Hemodiafiltration (HDF).	174

7.5.4	Continuous Renal Replacement Therapy (CRRT)	177
7.6	Membrane Modules for Hemodialysis	177
7.7	Performance Parameters of a Membrane Module: Clearance and Dialysance	181
7.8	A Simple Model for Hemodialysis	183
7.9	Evaluation of the Overall Mass Transfer Coefficient and Module Performance	186
7.10	A General Model for the Hemodiafiltration Process	187
7.10.1	Solvent Transmembrane Flux	189
7.10.2	Solute Flux	190
7.10.3	Model of the Membrane Dialyzer	192
7.11	Patient Device Models	194
7.11.1	Single-Compartment Model	197
7.11.2	Two-Compartment Model	201
7.12	Regenerative Dialysis	203
7.12.1	Model of a Regenerative Dialysis Process	208
7.13	Wearable Artificial Kidney	211
7.14	Bio-Artificial Kidneys	214
8	Artificial and Bio-Artificial Liver	219
8.1	Introduction	219
8.2	Structure and Function of Liver	220
8.2.1	Liver Anatomy	220
8.2.2	The Liver Functions	221
8.3	Liver Diseases and Artificial Support Systems	222
8.4	Artificial Liver Devices	223
8.4.1	Single-Pass Dialysis (SPAD)	224
8.4.2	Molecular Adsorbing Recirculating System (MARS)	224
8.4.3	Fractionated Plasma Separation and Adsorption (Prometheus)	225
8.4.4	Selective Plasma Filtration Technology (SEPET Liver Assist Device)	227
8.4.5	Hepa Wash	227
8.5	Modeling Toxin Removal in Liver Support Devices	228
8.5.1	Thermodynamics of Toxin Binding to Albumin	228
8.5.2	Dialysis of Albumin-Bound Toxins	233
8.5.3	Adsorption Units	235
8.5.4	Albumin Dialysis and Regeneration	240
8.6	Bio-Artificial Devices	243
8.6.1	BAL Systems	243
8.6.2	Bioreactors for BAL	245

8.6.3	Cells Used in BAL	249
8.6.4	Cell Seeding	250
8.6.5	Scaffolds.	251
