

Contents

1	Reinforcing by Fibres	1
1.1	Introduction	1
1.2	Discontinuous Fibres	2
1.3	Why Use Short Fibres?	4
1.4	Why Must the Fibre Be Thin?	5
1.5	The Theoretical Interfacial Shear Strength	6
1.6	The Theoretical Fibre Cleavage Strength	8
1.7	How to Make Discontinuous Fibres?	12
1.8	Moving Forward: The Big Picture	14
1.9	Summary	16
	References.	16
2	Physical Properties of Fibres and Matrix	21
2.1	Introduction	21
2.2	Composite Stress–Strain Profiles.	22
2.3	Structure.	23
2.3.1	General Descriptions of Fibre Shape, Size and Arrangement.	23
2.3.2	Fibre Aspect Ratio	24
2.3.3	How Structure Accounts for Load-Sharing in Composites	27
2.3.4	Fibre Orientation.	30
2.3.5	Fibre Packing Distribution	31
2.4	Mechanical Properties.	35
2.4.1	Composite Stiffness.	35
2.4.2	Composite Fracture Strength.	37
2.4.3	Resilience and Fracture Toughness	38
2.4.4	Probabilistic Analysis of Fracture	41
2.5	Summary	44
	References.	44

3	Mechanics of Elastic Stress Transfer	49
3.1	Introduction	49
3.2	Shear-Lag Analysis	50
3.2.1	General Model	50
3.2.2	Solutions to the General Model	52
3.2.3	The Original Shear-Lag Solution	53
3.2.4	Stress Function	56
3.2.5	Fibre–Matrix Binder	57
3.2.6	Fibre–Fibre Interactions	60
3.3	Factors Influencing Fibre Stress Uptake	62
3.3.1	Overview	62
3.3.2	Modulus of Elasticity	64
3.3.3	Fibre Aspect Ratio	64
3.3.4	Fibre Shape	65
3.3.5	Interfacial Shear Stresses	67
3.3.6	Fibre–Fibre Lateral Separation	69
3.3.7	Fibre–Fibre Overlap Distance	71
3.3.8	Fibre Packing and Fibre Volume Fraction	72
3.4	Summary	74
	References	75
4	Fibre Debonding, Matrix Yielding and Cracks	77
4.1	Introduction	77
4.2	Mechanics of Plastic Shear	79
4.2.1	Preliminary Concepts of Localized Plasticity	79
4.2.2	Possible Types of Plastic Shear in the Matrix	82
4.2.3	Plastic Shear by Slip at the Fibre–Matrix Interface	84
4.2.4	Matrix Crack at Fibre Ends	86
4.3	Intermediate Stages of Stress Transfer	89
4.3.1	Overview	89
4.3.2	Mode α , a.k.a. Matrix Yielding	90
4.3.3	Mode β , a.k.a. Fibre Debonding	91
4.3.4	Mode γ , a.k.a. Matrix Cracking	93
4.3.5	Estimating Yield Strain and Strength	94
4.4	Summary	95
	References	96
5	Mechanics of Plastic Stress Transfer	99
5.1	Introduction	99
5.2	State of the Composite During Plastic Stress Transfer	100
5.3	Shear-Sliding Analysis	101
5.3.1	Model Formulation	101
5.3.2	Further Considerations for Unique Solutions	104
5.3.3	Solutions	106
5.3.4	Effective Reinforcement	110

5.3.5	Effects of Truncation on Fibre Stress	111
5.3.6	A Plastic Composite?	112
5.4	Estimating the Modulus of Resilience	115
5.4.1	Overview	115
5.4.2	Energy Model	116
5.4.3	Predictions	118
5.5	Summary	119
	References.	119
6	Composite Fracture.	123
6.1	Introduction	123
6.2	Composite Fracture Mechanisms	124
6.2.1	Matrix Rupture	124
6.2.2	Fibre Pull-Out	127
6.2.3	Fibre Rupture	133
6.2.4	Total Work of Rupture	138
6.2.5	Composite Reliability	142
6.3	Summary	145
	References.	145
7	Composite Design	149
7.1	Introduction	149
7.2	Design for X	150
7.2.1	Overview	150
7.2.2	Strength.	150
7.2.3	Stiffness	154
7.2.4	Fracture Toughness	157
7.2.5	Stress Transfer Ratio	160
7.3	In Silico Mechanical Testing	162
7.3.1	Multiscale Approach for Composite Design	162
7.3.2	Stress–Strain Relationships	163
7.3.3	Fibre Composite Simulation	165
7.3.4	Optimization Algorithm	169
7.3.5	Heterogeneity	172
7.3.6	Hierarchical Architecture.	173
7.4	Framework for Composite Mechanics	174
7.5	Summary	178
	References.	178
	Appendix A: Convergence to Continuous-Fibre Composites	185
	Appendix B: Mechanical Properties of Materials	187

Discontinuous-Fibre Reinforced Composites
Fundamentals of Stress Transfer and Fracture
Mechanics
