1	The Analysis of Medical Images	1
1.1	Image Analysis in the Clinical Workflow	6
1.2	Using Tools	9
1.3	An Example: Multiple Sclerosis Lesion Segmentation in Brain MRI	15
1.4	Concluding Remarks	21
1.5	Exercises	21
	References	22
2	Digital Image Acquisition	23
2.1	X-ray Imaging	26
2.1.1	Generation, Attenuation, and Detection of X-rays	26
2.1.2	X-ray Imaging	31
2.1.3	Fluoroscopy and Angiography	35
2.1.4	Mammography	37
2.1.5	Image Reconstruction for Computed Tomography	38
2.1.6	Contrast Enhancement in X-ray Computed Tomography	46
2.1.7	Image Analysis on X-ray-Generated Images	46
2.2	Magnetic Resonance Imaging	48
2.2.1	Magnetic Resonance	48
2.2.2	MR Imaging	52
2.2.3	Some MR Sequences	55
2.2.4	Artifacts in MR Imaging	57
2.2.5	MR Angiography	58
2.2.6	BOLD Imaging	59
2.2.7	Perfusion Imaging	61
2.2.8	Diffusion Imaging	62
2.2.9	Image Analysis on Magnetic Resonance Images	64
2.3	Ultrasound	66
2.3.1	Ultrasound Imaging	67
2.3.2	Image Analysis on Ultrasound Images	70

2.4	Nuclear Imaging	71
2.4.1	Scintigraphy.	71
2.4.2	Reconstruction Techniques for Tomography in Nuclear Imaging	72
2.4.3	Single Photon Emission Computed Tomography (SPECT).	78
2.4.4	Positron Emission Tomography (PET).	79
2.4.5	Image Analysis on Nuclear Images	81
2.5	Other Imaging Techniques	81
2.5.1	Optical Coherence Tomography	81
2.5.2	Photography.	82
2.5.3	Optical Microscopy	83
2.5.4	Electron Microscopy	85
2.5.5	EEG and MEG	87
2.6	Concluding Remarks.	89
2.7	Exercises.	89
	References.	91
3	Image Storage and Transfer.	95
3.1	Information Systems in a Hospital	96
3.2	The DICOM Standard.	102
3.3	Establishing DICOM Connectivity	109
3.4	The DICOM File Format	111
3.5	Technical Properties of Medical Images	113
3.6	Displays and Workstations	115
3.7	Compression of Medical Images.	121
3.8	Concluding Remarks.	122
3.9	Exercises.	122
	References.	123
4	Image Enhancement	125
4.1	Measures of Image Quality.	126
4.1.1	Spatial Resolution	126
4.1.2	Definition of Contrast	127
4.1.3	The Modulation Transfer Function	131
4.1.4	Signal-to-Noise Ratio (SNR)	131
4.2	Image Enhancement Techniques.	133
4.2.1	Contrast Enhancement	133
4.2.2	Resolution Enhancement	136
4.2.3	Edge Enhancement	139
4.3	Noise Reduction	144
4.3.1	Noise Reduction by Linear Filtering	144
4.3.2	Median Filtering	148
4.3.3	Diffusion Filtering	151
4.3.4	Gradient Adaptive Smoothing	156

4.3.5	Bilateral Filtering	157
4.3.6	Guided Filtering.	160
4.3.7	Bayesian Image Restoration.	162
4.4	Concluding Remarks.	169
4.5	Exercises.	169
	References.	170
5	Feature Detection	173
5.1	Edge Tracking	174
5.2	Hough Transform	179
5.3	Corners	181
5.4	Template Matching	185
5.5	SIFT Feature and SURF	188
5.6	Binary Key Point Descriptor and Detectors	191
5.7	Supapixel.	193
5.8	MSER Features.	195
5.9	Local Shape Context.	196
5.10	Texture	198
5.11	Histogram of Oriented Gradients	201
5.12	Saliency and Gist	202
5.13	Concluding Remarks.	203
5.14	Exercises.	204
	References.	205
6	Segmentation: Principles and Basic Techniques	209
6.1	Segmentation Strategies	210
6.2	Data Knowledge	213
6.2.1	Homogeneity of Intensity	215
6.2.2	Homogeneity of Texture	217
6.3	Domain Knowledge About the Objects.	218
6.3.1	Representing Domain Knowledge	220
6.3.2	Variability of Model Attributes	221
6.3.3	The Use of Interaction.	222
6.4	Interactive Segmentation	225
6.5	Thresholding.	226
6.6	Homogeneity-Based Segmentation	232
6.7	The Watershed Transform: Computing Zero Crossings.	234
6.8	Seeded Regions	237
6.9	Live Wire	240
6.10	Concluding Remarks.	244
6.11	Exercises.	245
	References.	246

7	Segmentation in Feature Space	249
7.1	Segmentation by Classification in Feature Space	251
7.1.1	Computing the Likelihood Function	252
7.1.2	Multi-dimensional Feature Vectors	256
7.1.3	Computing a Priori Probability	258
7.1.4	Extension to More Than Two Classes	260
7.2	Clustering in Feature Space	260
7.2.1	Partitional Clustering and K-means Clustering.	261
7.2.2	Mean Shift Clustering	264
7.2.3	Kohonen's Self-organizing Maps	267
7.3	Concluding Remarks.	270
7.4	Exercises.	271
	References.	272
8	Segmentation as a Graph Problem.	275
8.1	Graph Cuts	277
8.1.1	Graph Cuts for Computing a Segmentation	278
8.1.2	Graph Cuts to Approximate a Bayesian Segmentation	284
8.1.3	Problem-Specific Adaptation of t -Link Weights.	289
8.1.4	Adding Generic Domain Knowledge	291
8.1.5	Normalized Graph Cuts	293
8.2	Segmentation as a Path Problem.	296
8.2.1	Fuzzy Connectedness.	296
8.2.2	The Image Foresting Transform.	298
8.2.3	Random Walks	300
8.2.4	Other Methods Based on Seed Placements	304
8.3	Similarities and Integrations of Graph-Based Strategies	305
8.4	Concluding Remarks.	306
8.5	Exercises.	306
	References.	307
9	Active Contours and Active Surfaces.	311
9.1	Explicit Active Contours and Surfaces	313
9.1.1	Deriving the Model	313
9.1.2	The Use of Additional Constraints.	316
9.1.3	T-Snakes and T-Surfaces	319
9.2	The Level Set Model	321
9.2.1	Level Sets	322
9.2.2	Level Sets and Wave Propagation	324
9.2.3	Schemes for Computing Level Set Evolution	329
9.2.4	Computing Stationary Level Set Evolution	333
9.2.5	Computing Dynamic Level Set Evolution	336
9.2.6	Segmentation and Speed Functions	338
9.2.7	Geodesic Active Contours	341

9.2.8	Level Sets and the Mumford–Shah Functional	343
9.2.9	Avoiding Reinitialization	351
9.2.10	Noise Reduction and Boundary Enhancement	352
9.2.11	Initial Level Sets and Initial Regions of Interest	353
9.2.12	Topologically Constrained Level Sets	354
9.3	Concluding Remarks	355
9.4	Exercises	356
	References	357
10	Registration and Normalization	361
10.1	Feature Space and Correspondence Criterion	363
10.1.1	Correspondence Criteria for Extrinsic and Intrinsic Markers	364
10.1.2	Requirements for Extrinsic and Intrinsic Markers	367
10.1.3	Similarity for Image-Based Features	370
10.2	Rigid Registration	375
10.2.1	Registration Using Paired Landmarks	375
10.2.2	Registration with Unpaired Landmarks	378
10.2.3	Outlier Detection	379
10.2.4	Registration in the Frequency Domain	380
10.2.5	The Head-Hat Registration	381
10.2.6	The ICP Algorithm	382
10.3	Registration of Projection Images to 3d Data	383
10.3.1	Registration Using Digitally Reconstructed Radiographs	384
10.3.2	Optimization of the Similarity Criterion	386
10.4	Search Space and Optimization in Non-rigid Registration	387
10.4.1	Elastic Registration	388
10.4.2	Using a Viscous Fluid Model	388
10.4.3	Free-Form Deformations	390
10.4.4	Neighborhood Similarity	390
10.4.5	Multi-scale Registration	391
10.5	Normalization	392
10.6	Joint Segmentation and Registration	395
10.7	Non-rigid Discontinuous Registration	397
10.8	Concluding Remarks	400
10.9	Exercises	400
	References	401
11	Shape, Appearance and Spatial Relationships	405
11.1	Shape Models	407
11.2	Simple Models	411
11.2.1	Template Matching	411
11.2.2	Hough Transform	413
11.3	Implicit Models	415

11.4	The Medial Axis Representation	417
11.4.1	Computation of the Medial Axis Transform	417
11.4.2	Shape Representation by Medial Axes	419
11.5	Active Shape and Active Appearance Models	420
11.5.1	Creating an ASM	421
11.5.2	Using ASMs for Segmentation	424
11.5.3	The Active Appearance Model	426
11.5.4	Deficiencies of Statistical Shape Models	427
11.5.5	Changing the Parametric Model	429
11.5.6	Using a Part-Based Model	429
11.5.7	Using a Non-parametric Model	430
11.6	Physically-Based Shape Models	432
11.6.1	Mass-Spring Models	434
11.6.2	Finite Element Models	439
11.7	Shape, Appearance and Pose Priors for Segmentation	453
11.7.1	Atlas-Based Segmentation	453
11.7.2	Combining Shape Information with Level Set Segmentation	455
11.7.3	Solutions Based on Graph Cuts	460
11.7.4	Graph Cuts on Pre-segmented Images	461
11.8	Using a Graphical Model for Detecting Object Parts	463
11.9	Concluding Remarks	465
11.10	Exercises	466
	References	468
12	Classification and Clustering	473
12.1	Features and Feature Space	474
12.1.1	Linear Decorrelation of Features	475
12.1.2	Linear Discriminant Analysis	477
12.1.3	Independent Component Analysis	478
12.2	Bayesian Classifier	480
12.3	Classification Based on Distance to Training Samples	482
12.4	Decision Boundaries	485
12.4.1	Adaptive Decision Boundaries	486
12.4.2	The Multilayer Perceptron	488
12.4.3	Support Vector Machines	495
12.5	Convolutional Neural Networks and Deep Learning	498
12.5.1	Structure of a CNN	499
12.5.2	What Does a CNN Learn	502
12.5.3	Applications in Medical Image Analysis	504
12.6	Classification by Association	506
12.7	Clustering Techniques	508
12.7.1	Agglomerative Clustering	508
12.7.2	Fuzzy c-Means Clustering	510

12.8	Bagging and Boosting	512
12.9	Decision Trees	514
12.9.1	Creating a Decision Tree	514
12.9.2	Random Forest	516
12.10	Multiple Instance Learning	516
12.11	Bag of Visual Words	518
12.12	Dealing with Imbalanced Data	521
12.13	Concluding Remarks.	524
12.14	Exercises.	524
	References.	526
13	Validation	529
13.1	Measures of Quality	531
13.1.1	Quality for a Delineation Task	532
13.1.2	Considering Interaction in a Segmentation Task	536
13.1.3	Quality for a Detection Task	537
13.1.4	Quality for a Registration Task	541
13.2	The Ground Truth.	542
13.2.1	Ground Truth from Real Data	543
13.2.2	Ground Truth from Phantoms	546
13.3	Representativeness of Data	552
13.3.1	Separation Between Training and Test Data	552
13.3.2	Identification of Sources of Variation and Outlier Detection	553
13.3.3	Robustness with Respect to Parameter Variation	555
13.4	Significance of Results	555
13.5	Concluding Remarks.	559
13.6	Exercises.	559
	References.	560
14	Appendix	563
14.1	Optimization of Markov Random Fields.	563
14.1.1	Markov Random Fields	563
14.1.2	Simulated Annealing	566
14.1.3	Mean Field Annealing	568
14.1.4	Iterative Conditional Modes.	569
14.2	Variational Calculus	569
14.3	Principal Component Analysis	572
14.3.1	Computing the PCA	572
14.3.2	Robust PCA	575
	References.	577
