

# Contents

<b>1</b>	<b>Quantum Fluctuations and Their Measurements</b>	<b>1</b>
1.1	Radiation Fields	2
1.2	The Field with Multiatom Sources	6
1.3	Photodetection Theory	10
1.4	Definition of the Power Spectrum	17
1.4.1	Power Spectrum of a Stationary Field	17
1.4.2	Power Spectrum of a Nonstationary Field	19
1.5	Spectrum of the Intensity Fluctuations	24
1.5.1	Contribution of the Background Field	27
1.6	Radiation Intensity	30
	References	36
<b>2</b>	<b>Spectra of Radiating Systems</b>	<b>39</b>
2.1	Emission Power Spectrum	39
2.1.1	Coherent (Elastic) Part of the Spectrum	42
2.1.2	Incoherent (Noise) Part of the Spectrum	46
2.2	Absorption Spectrum of a Probe Field	51
2.3	Phase-Dependent Spectra and Their Measurements	57
2.4	Homodyne Detection of Quantum Fluctuations	60
2.5	Balanced Homodyne Detection of Quantum Fluctuations	68
	References	72
<b>3</b>	<b>Spectroscopy with Single Atoms in Atomic Beams</b>	<b>73</b>
3.1	Spectroscopy with a Monochromatic Excitation	74
3.1.1	Optical Bloch Equations	77
3.1.2	Excitation Spectrum	79
3.1.3	Stationary Fluorescence Spectrum	80
3.2	Spectral Linewidth Narrowing in a Tailored Reservoir	83
3.2.1	Dressed States of a Driven Atom	83
3.2.2	Transition Rates	85
3.2.3	Populations and Coherences	86
3.2.4	Incoherent Fluorescence Spectrum	89

3.3	Atomic Population Inversion in a Tailored Vacuum . . . . .	91
3.3.1	Enhancement and Suppression of the Atomic Excitation . . . . .	91
3.3.2	Enhancement and Suppression of the Atomic Excitation: Experiment . . . . .	92
3.4	Spectral Linewidth Narrowing in Free Space . . . . .	94
3.5	Spectral Linewidth Narrowing in Free Space via Coherent Pumping . . . . .	95
3.5.1	Fluorescence Spectrum . . . . .	96
3.5.2	Dressed-Atom Model Explanation of the Linewidth Narrowing . . . . .	101
3.6	Experimental Studies of the Spectral Line Narrowing . . . . .	105
	References . . . . .	107
<b>4</b>	<b>Collective Multiatom Spectroscopy . . . . .</b>	<b>109</b>
4.1	Collective Atomic States . . . . .	110
4.1.1	Master Equation for the Density Operator . . . . .	114
4.1.2	Equations of Motion for the Density Matrix Elements . . . . .	117
4.2	Stationary Intensity . . . . .	118
4.2.1	General Features of the Radiation Intensity . . . . .	119
4.2.2	Radiation Intensity for Symmetric Driving . . . . .	121
4.2.3	Radiation Intensity for Nonsymmetric Driving . . . . .	123
4.3	Selective Excitation of the Collective States . . . . .	126
4.3.1	Experimental Preparation of Two Atoms in a Collective State . . . . .	129
4.4	Experimental Evidence of Suppressed Spontaneous Emission from a Large Cloud of Atoms . . . . .	134
4.5	Atom Physics Meets Solid State Physics: Spectroscopy with Artificial Atoms . . . . .	136
4.5.1	Measurement of Subradiance of Two Distant Artificial Atoms . . . . .	137
4.5.2	Measurement of Suppressed Linewidths of Multiple Artificial Atoms . . . . .	138
	References . . . . .	143
<b>5</b>	<b>Time-Dependent Fluorescence Spectroscopy . . . . .</b>	<b>145</b>
5.1	Modulation Spectroscopy . . . . .	146
5.2	Bichromatic Excitation . . . . .	149
5.2.1	Floquet Method Approach . . . . .	150
5.2.2	Continued Fraction Method . . . . .	151
5.2.3	Matrix Inversion Method . . . . .	154
5.2.4	Fluorescence Spectrum . . . . .	156
5.2.5	Dressed-Atom Model Analysis of the Dynamical Suppression of the Spectral Component . . . . .	159

5.3	Excitation with an Amplitude–Modulated Field. . . . .	162
5.4	Excitation with Two Fields of Equal Frequencies. . . . .	171
5.5	Experimental Verification of the Dynamical Suppression of Spontaneous Emission . . . . .	178
5.5.1	Experiments with Doubly Driven Atomic Beams . . . . .	178
5.5.2	Experiments with a Doubly Driven Quantum Dot. . . . .	181
	References. . . . .	183
<b>6</b>	<b>Quantum Spectroscopy with Squeezed Light . . . . .</b>	<b>185</b>
6.1	Squeezed Light for Spectroscopic Applications . . . . .	186
6.1.1	Squeezed Light from a Degenerate Parametric Oscillator: Experiment. . . . .	186
6.1.2	The Input–Output Theory . . . . .	188
6.1.3	Correlations Functions of the Output DPO Field. . . . .	192
6.2	Fluctuations and Correlations of Squeezed Light . . . . .	195
6.2.1	Nonclassical Fluctuations of Squeezed Light. . . . .	196
6.2.2	Quantum and Classical Correlations in Squeezed Light . . . . .	197
6.3	Application of Squeezed Light in Atomic Spectroscopy. . . . .	199
6.3.1	Radiative Decay in Squeezed Vacuum . . . . .	200
6.3.2	Signatures of Squeezing Excitation in a Three-Level Atom. . . . .	206
6.3.3	Spontaneous Decay to a Correlated Pure State . . . . .	211
6.3.4	Mapping of Squeezed Fluctuations on Atoms. . . . .	214
6.3.5	Signatures of Squeezing Excitation in the Dicke Model . . . . .	216
	References. . . . .	221
<b>7</b>	<b>Experiments with Squeezed Light Excitation of Atoms . . . . .</b>	<b>223</b>
7.1	Experimental Investigations of Atom–Squeezed-Light Interaction in a Cavity . . . . .	224
7.2	Experimental Realization of the Suppression of the Atomic Decay Rate. . . . .	233
7.3	Experimental Observation of the Phase Dependent Fluorescence Spectra . . . . .	236
7.4	Experimental Realization of Nonclassical Excitation of a Three-Level Atom. . . . .	238
7.5	Ultra-High Frequency Metrology with Squeezed Light. . . . .	243
7.5.1	Two-Photon Interference. . . . .	243
7.5.2	Observations of the Two-Photon Interference . . . . .	247
	References. . . . .	249
<b>8</b>	<b>Engineering Collective and Squeezed Field Interactions. . . . .</b>	<b>251</b>
8.1	Engineering Long Distance Collective Interactions. . . . .	252
8.1.1	Two Distant Atoms in a Cavity . . . . .	252
8.1.2	Dynamics of the Atoms in Bad Cavity . . . . .	254

8.1.3	Dynamics of the Atoms in Off-Resonant Cavity . . . . .	258
8.1.4	Application to Population Transfer . . . . .	260
8.1.5	Experimental Evidence of the Population Transfer . . . . .	262
8.2	Engineering Atom-Squeezed Light Interaction . . . . .	264
8.3	Engineered Incoherent Driving of a Cavity. . . . .	267
8.3.1	Spectrum of the Cavity Field . . . . .	271
8.4	Subnatural Linewidths in a Thermal Field . . . . .	274
8.5	Engineered Squeezed Vacuum Reservoir . . . . .	278
	References. . . . .	283
<b>9</b>	<b>Beating Quantum Limits in Optical Spectroscopy . . . . .</b>	<b>285</b>
9.1	Optical Interferometry: Classical Analysis . . . . .	286
9.1.1	Mach–Zehnder Interferometer . . . . .	286
9.2	Standard Quantum Limit . . . . .	289
9.2.1	Standard Quantum Limit in a Mach–Zehnder Interferometer . . . . .	291
9.3	Beyond the Standard Quantum Limit . . . . .	294
9.3.1	Beating the SQL with Squeezed Light . . . . .	295
9.3.2	Experimental Evidence of Beating the SQL with Squeezed Light . . . . .	297
9.3.3	Beating the SQL with Entangled Light: Heisenberg Limit. . . . .	300
9.3.4	Approaching the Heisenberg Limit Without Entanglement . . . . .	303
9.3.5	Beating the Heisenberg Limit . . . . .	308
9.3.6	Experimental Evidence of Beating the SQL in a Four-Photon Interferometry . . . . .	311
9.3.7	Effect of Losses and Imperfections . . . . .	314
9.4	Quantum Optical Lithography . . . . .	316
9.4.1	Experimental Evidence of Multi-Photon Super-Resolution Without Entanglement. . . . .	322
9.4.2	Multi-Photon Super-Resolution with Entanglement. . . . .	324
9.4.3	Experimental Evidence of Super-Resolution with Four-Photon Entangled Light . . . . .	325
9.4.4	Super-Resolution with Classical Light. . . . .	330
	References. . . . .	331
<b>10</b>	<b>Dipole Squeezing and Spin Squeezed States . . . . .</b>	<b>335</b>
10.1	Dipole Squeezing in a Spin- $\frac{1}{2}$ System . . . . .	336
10.1.1	Application to Resonance Fluorescence . . . . .	340
10.2	Dipole Squeezing in a Spin- $\frac{N}{2}$ System. . . . .	345
10.3	Atomic Dipole Squeezing and Field Squeezing . . . . .	351
10.4	Planar Squeezing . . . . .	353
10.5	Spin Squeezing. . . . .	355
10.6	Spin Squeezing and Entanglement . . . . .	365

10.6.1 Relation Between Entanglement and the Kitagawa  
and Ueda Spin Squeezing Parameter. . . . . 366

10.6.2 Relation Between Entanglement and the Spectroscopic  
Spin Squeezing Parameter. . . . . 368
