PART I NATIVE TAU PROTEIN: CONFORMATIONAL STUDIES AND TUBULIN INTERACTIONS	
1 Conformational Dynamics of Intracellular Tau Protein Revealed by CD and SAXS	3
<i>Nalini Vijay Gorantla, Alexander V. Shkumatov, and Subashchandrabose Chinnathambi</i>	
2 Global Conformation of Tau Protein Mapped by Raman Spectroscopy	21
<i>Nalini Vijay Gorantla, Puneet Khandelwal, Pankaj Poddar, and Subashchandrabose Chinnathambi</i>	
3 Molecular Dynamics Simulation of Tau Peptides for the Investigation of Conformational Changes Induced by Specific Phosphorylation Patterns . . .	33
<i>Neha S. Gandhi, Predrag Kukic, Guy Lippens, and Ricardo L. Mancera</i>	
4 Tau Interaction with Tubulin and Microtubules: From Purified Proteins to Cells	61
<i>Tiphany De Bessa, Gilles Breuzard, Diane Allegro, François Devred, Vincent Peyrot, and Pascale Barbier</i>	
PART II IN VITRO SELF-ASSOCIATION OF TAU PROTEIN: OLIGOMER AND FIBRIL FORMATION	
5 X-Ray Structural Study of Amyloid-Like Fibrils of Tau Peptides Bound to Small-Molecule Ligands	89
<i>Einav Tayeb-Fligelman and Meytal Landau</i>	
6 Detection and Quantification Methods for Fibrillar Products of In Vitro Tau Aggregation Assays	101
<i>Niki Nanavaty, Lauren Lin, Samantha H. Hinckley, and Jeff Kuret</i>	
7 Fourier Transform Infrared (FTIR) Spectroscopy, Ultraviolet Resonance Raman (UVR) Spectroscopy, and Atomic Force Microscopy (AFM) for Study of the Kinetics of Formation and Structural Characterization of Tau Fibrils	113
<i>Gayathri Ramachandran</i>	
8 Assays for the Screening and Characterization of Tau Aggregation Inhibitors	129
<i>Janet E. Rickard, David Horsley, Claude M. Wischik, and Charles R. Harrington</i>	

9	Tau Oligomers as Pathogenic Seeds: Preparation and Propagation In Vitro and In Vivo.	141
	<i>Julia E. Gerson, Urmi Sengupta, and Rakez Kaye</i>	
PART III TAU POST-TRANSLATIONAL MODIFICATIONS		
10	Mass Spectrometry Analysis of Lysine Posttranslational Modifications of Tau Protein from Alzheimer's Disease Brain	161
	<i>Stefani N. Thomas and Austin J. Yang</i>	
11	The Study of Posttranslational Modifications of Tau Protein by Nuclear Magnetic Resonance Spectroscopy: Phosphorylation of Tau Protein by ERK2 Recombinant Kinase and Rat Brain Extract, and Acetylation by Recombinant Creb-Binding Protein.	179
	<i>Haoling Qi, Clément Despres, Sudhakaran Prabakaran, François-Xavier Cantrelle, Béatrice Chambraud, Jeremy Gunawardena, Guy Lippens, Caroline Smet-Nocca, and Isabelle Landrieu</i>	
12	Tag-Free Semi-Synthesis of the Tau Protein	215
	<i>Oliver Reimann, Caroline Smet-Nocca, and Christian P.R. Hackenberger</i>	
13	Production of O-GlcNAc Modified Recombinant Tau in <i>E. coli</i> and Detection of Ser400 O-GlcNAc Tau In Vivo	237
	<i>Scott A. Yuzwa and David J. Vocadlo</i>	
PART IV DETECTING TAU PROTEINS, THEIR MODIFICATIONS, MUTATIONS AND INTERACTING PARTNERS		
14	Two-Dimensional Electrophoresis Protocols to Analyze the Microtubule-Associated Tau Proteins from Several Biological Sources	251
	<i>Nicolas Sergeant, Francisco-Jose Fernandez-Gomez, Helene Obriot, Sabiha Eddarkaoui, Valérie Buée-Scherrer, and Luc Buée</i>	
15	A Simple Method to Avoid Nonspecific Signal When Using Monoclonal Anti-Tau Antibodies in Western Blotting of Mouse Brain Proteins.	263
	<i>Franck R. Petry, Samantha B. Nicholls, Sébastien S. Hébert, and Emmanuel Planel</i>	
16	Flow Cytometry Analysis and Quantitative Characterization of Tau in Synaptosomes from Alzheimer's Disease Brains	273
	<i>Karen Hoppens Gyls and Tina Bilousova</i>	
17	In Vivo Microdialysis of Brain Interstitial Fluid for the Determination of Extracellular Tau Levels	285
	<i>Kaoru Yamada</i>	
18	Proximity Ligation Assay: A Tool to Study Endogenous Interactions Between Tau and Its Neuronal Partners	297
	<i>Alexis Bretteville, Florie Demiautte, and Julien Chapuis</i>	
19	Finding <i>MAPT</i> Mutations in Frontotemporal Dementia and Other Tauopathies	307
	<i>Carol Dobson-Stone and John B. J. Kwok</i>	

PART V CELLULAR AND IN VIVO MODELS OF TAU PHYSIOPATHOLOGY

20	Tracking Tau in Neurons: How to Grow, Fix, and Stain Primary Neurons for the Investigation of Tau in All Developmental Stages.	327
	<i>Hans Zempel and Eva-Maria Mandelkow</i>	
21	Tracking Tau in Neurons: How to Transfect and Track Exogenous Tau into Primary Neurons.	335
	<i>Hans Zempel, Julia Luedtke, and Eva-Maria Mandelkow</i>	
22	Image-Based Analysis of Intracellular Tau Aggregation by Using Tau-BiFC Cell Model.	341
	<i>Sungsu Lim, Dohee Kim, Dong Jin Kim, and Yun Kyung Kim</i>	
23	FRET and Flow Cytometry Assays to Measure Proteopathic Seeding Activity in Biological Samples	349
	<i>Jennifer L. Furman and Marc I. Diamond</i>	
24	In Vivo Imaging of Tau Aggregates in the Mouse Retina.	361
	<i>Christian Schön and Jochen Herms</i>	
25	In Vivo Hyperthermic Stress Model: An Easy Tool to Study the Effects of Oxidative Stress on Neuronal Tau Functionality in Mouse Brain	369
	<i>Alban Chauderlier, Lucie Delattre, Luc Buée, and Marie-Christine Galas</i>	
26	Identification of Tau Toxicity Modifiers in the <i>Drosophila</i> Eye	375
	<i>Pierre Dourlen</i>	
27	Regulation of Neurotrophic Factors During Pathogenic Tau-Aggregation: A Detailed Protocol for Double-Labeling mRNA by In Situ Hybridization and Protein Epitopes by Immunohistochemistry	391
	<i>Katharina Schindowski-Zimmermann</i>	
28	Pin1 Knockout Mice: A Model for the Study of Tau Pathology in Alzheimer's Disease.	415
	<i>Asami Kondo, Onder Albayram, Xiao Zhen Zhou, and Kun Ping Lu</i>	
	<i>Index</i>	427

Tau Protein

Methods and Protocols

Smet-Nocca, C. (Ed.)

2017, XVIII, 432 p. 83 illus., 64 illus. in color., Hardcover

ISBN: 978-1-4939-6596-0
