|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <i>Preface</i> . . . . .                                                                                                                                                                                                                                                                                      | V   |
| <i>Contributors</i> . . . . .                                                                                                                                                                                                                                                                                 | IX  |
| 1 Improved Denaturation of Small RNA Duplexes and Its Application<br>for Northern Blotting . . . . .<br><i>C. Jake Harris, David C. Baulcombe, and Attila Molnar</i>                                                                                                                                          | 1   |
| 2 High-Throughput RT-qPCR for the Analysis of Circulating MicroRNAs. . . . .<br><i>Geok Wee Tan and Lu Ping Tan</i>                                                                                                                                                                                           | 7   |
| 3 Genome-Wide Comparison of Next-Generation Sequencing<br>and qPCR Platforms for microRNA Profiling in Serum . . . . .<br><i>Thorarinn Blondal, Maurizia Rossana Brunetto, Daniela Cavallone,<br/>Martin Mikkelsen, Michael Thorsen, Yuan Mang, Hazel Pinheiro,<br/>Ferruccio Bonino, and Peter Mouritzen</i> | 21  |
| 4 Small RNA Profiling by Next-Generation Sequencing<br>Using High-Definition Adapters . . . . .<br><i>Martina Billmeier and Ping Xu</i>                                                                                                                                                                       | 45  |
| 5 Surface Acoustic Wave Lysis and Ion-Exchange Membrane Quantification<br>of Exosomal MicroRNA . . . . .<br><i>Katherine E. Richards, David B. Go, and Reginald Hill</i>                                                                                                                                      | 59  |
| 6 Droplet Microfluidic Device Fabrication and Use for Isothermal<br>Amplification and Detection of MicroRNA . . . . .<br><i>Maria Chiara Giuffrida, Roberta D'Agata, and Giuseppe Spoto</i>                                                                                                                   | 71  |
| 7 Interrogation of Functional miRNA–Target Interactions<br>by CRISPR/Cas9 Genome Engineering . . . . .<br><i>Yale S. Michaels, Qianxin Wu, and Tudor A. Fulga</i>                                                                                                                                             | 79  |
| 8 Cell-Free Urinary MicroRNAs Expression in Small-Scale Experiments. . . . .<br><i>Ludek Zavesky, Eva Jandakova, Radovan Turyna, Daniela Duskova,<br/>Lucie Langmeierova, Vit Weinberger, Lubos Minar, Ales Horinek,<br/>and Milada Kohoutova</i>                                                             | 99  |
| 9 Peptide-Based Isolation of Argonaute Protein Complexes Using Ago-APP . . . . .<br><i>Judith Hauptmann and Gunter Meister</i>                                                                                                                                                                                | 107 |
| 10 Predicting Functional MicroRNA-mRNA Interactions . . . . .<br><i>Zixing Wang and Yin Liu</i>                                                                                                                                                                                                               | 117 |
| 11 Computational and Experimental Identification of Tissue-Specific<br>MicroRNA Targets . . . . .<br><i>Rabeleh Amirkhah, Hojjat Naderi Meshkin, Ali Farazmand,<br/>John E.J. Rasko, and Ulf Schmitz</i>                                                                                                      | 127 |

|    |                                                                                                                         |     |
