

Contents

1	Asymptotic Freeness of Gaussian Random Matrices	1
1.1	Moments and cumulants of random variables	2
1.2	Moments of a Gaussian random variable	3
1.3	Gaussian vectors	5
1.4	The moments of a standard complex Gaussian random variable	5
1.5	Wick's formula	6
1.6	Gaussian random matrices	7
1.7	A genus expansion for the GUE	8
1.8	Non-crossing partitions and permutations	9
1.9	Wigner's semi-circle law	11
1.10	Asymptotic freeness of independent GUE's	12
1.11	Freeness and asymptotic freeness	14
1.12	Basic properties of freeness	15
1.13	Classical moment-cumulant formulas	18
1.14	Additional exercises	20
2	The Free Central Limit Theorem and Free Cumulants	23
2.1	The classical and free central limit theorems	23
2.1.1	Classical central limit theorem	28
2.1.2	Free central limit theorem	28
2.2	Non-crossing partitions and free cumulants	32
2.3	Products of free random variables	39
2.4	Functional relation between moment series and cumulant series	41
2.5	Subordination and the non-commutative derivative	44
3	Free Harmonic Analysis	51
3.1	The Cauchy transform	52
3.2	Moments and asymptotic expansions	66
3.3	Analyticity of the R -transform: compactly supported measures	67

3.4	Measures with finite variance	71
3.5	The free additive convolution of probability measures with finite variance	77
3.6	The R -transform and free additive convolution of arbitrary measures	82
4	Asymptotic Freeness for Gaussian, Wigner, and Unitary Random Matrices	93
4.1	Asymptotic freeness: averaged convergence versus almost sure convergence	93
4.2	Asymptotic freeness of Gaussian random matrices and deterministic matrices	99
4.3	Asymptotic freeness of Haar distributed unitary random matrices and deterministic matrices	102
4.4	Asymptotic freeness between Wigner and deterministic random matrices	106
4.5	Examples of random matrix calculations	116
4.5.1	Wishart matrices and the Marchenko-Pastur distribution	116
4.5.2	Sum of random matrices	118
4.5.3	Product of random matrices	119
5	Fluctuations and Second Order Freeness	121
5.1	Fluctuations of GUE random matrices	122
5.2	Fluctuations of several matrices	132
5.3	Second order probability space and second order freeness	136
5.4	Second order cumulants	142
5.5	Functional relation between second order moment and cumulant series	149
5.6	Diagonalization of fluctuations	151
5.6.1	Diagonalization in the one-matrix case	152
5.6.2	Diagonalization in the multivariate case	158
6	Free Group Factors and Freeness	159
6.1	Group (von Neumann) algebras	160
6.2	Free group factors	161
6.3	Free product of groups	162
6.4	Moments and isomorphism of von Neumann algebras	162
6.5	Freeness in the free group factors	163
6.6	The structure of free group factors	165
6.7	Compression of free group factors	166
6.8	Circular operators and complex Gaussian random matrices	168
6.9	Proof of $\mathcal{L}(\mathbb{F}_3)_{1/2} \simeq \mathcal{L}(\mathbb{F}_9)$	171
6.10	The general case $\mathcal{L}(\mathbb{F}_n)_{1/k} \simeq \mathcal{L}(\mathbb{F}_{1+(n-1)k^2})$	173
6.11	Interpolating free group factors	173
6.12	The dichotomy for the free group factor isomorphism problem ..	174

7	Free Entropy χ: The Microstates Approach via Large Deviations	175
7.1	Motivation	175
7.2	Large deviation theory and Cramér's theorem	176
7.3	Sanov's theorem and entropy	181
7.4	Back to random matrices and one-dimensional free entropy	182
7.5	Definition of multivariate free entropy	185
7.6	Some important properties of χ	187
7.7	Applications of free entropy to operator algebras	189
7.7.1	The proof of Theorem 7, part (i)	191
7.7.2	The proof of Theorem 7, part (iii)	193
8	Free Entropy χ^*: The Non-microstates Approach via Free Fisher Information	195
8.1	Non-commutative derivatives	196
8.2	∂_i as unbounded operator on $\mathbb{C}\langle \mathbf{x}_1, \dots, \mathbf{x}_n \rangle$	198
8.3	Conjugate variables and free Fisher information Φ^*	203
8.4	Additivity of Φ^* and freeness	212
8.5	The non-microstates free entropy χ^*	216
8.6	Operator algebraic applications of free Fisher information	217
8.7	Absence of atoms for self-adjoint polynomials	219
8.8	Additional exercises	221
9	Operator-Valued Free Probability Theory and Block Random Matrices	225
9.1	Gaussian block random matrices	225
9.2	General theory of operator-valued free probability	234
9.3	Relation between scalar-valued and matrix-valued cumulants	240
9.4	Moving between different levels	242
9.5	A non-self-adjoint example	245
10	Deterministic Equivalents, Polynomials in Free Variables, and Analytic Theory of Operator-Valued Convolution	249
10.1	The general concept of a free deterministic equivalent	249
10.2	A motivating example: reduction to multiplicative convolution	252
10.3	The general case: reduction to operator-valued additive convolution via the linearization trick	253
10.4	Analytic theory of operator-valued convolutions	257
10.4.1	General notations	258
10.4.2	Operator-valued additive convolution	258
10.4.3	Operator-valued multiplicative convolution	259
10.5	Numerical example	259
10.6	The case of rational functions	260
10.7	Additional exercise	262
11	Brown Measure	263
11.1	Brown measure for normal operators	263
11.2	Brown measure for matrices	264

11.3	Fuglede-Kadison determinant in finite von Neumann algebras...	266
11.4	Subharmonic functions and their Riesz measures	267
11.5	Definition of the Brown measure	268
11.6	Brown measure of R -diagonal operators	271
11.6.1	A little about the proof	272
11.6.2	Example: circular operator	273
11.6.3	The circular law	273
11.6.4	The single ring theorem	274
11.7	Brown measure of elliptic operators	275
11.8	Brown measure for unbounded operators	275
11.9	Hermitization method: using operator-valued free probability for calculating the Brown measure	276
11.10	Brown measure of arbitrary polynomials in free variables	277
12	Solutions to Exercises	281
12.1	Solutions to exercises in Chapter 1	281
12.2	Solutions to exercises in Chapter 2	291
12.3	Solutions to exercises in Chapter 3	294
12.4	Solutions to exercises in Chapter 4	301
12.5	Solutions to exercises in Chapter 5	302
12.6	Solutions to exercises in Chapter 6	303
12.7	Solutions to exercises in Chapter 7	305
12.8	Solutions to exercises in Chapter 8	307
12.9	Solutions to exercises in Chapter 9	313
12.10	Solutions to exercises in Chapter 10	314
12.11	Solutions to exercises in Chapter 11	315
	References	319
	Index of Exercises	329
	Index	331
