

**CONTENTS**

<b>LIST OF FIGURES</b>	<b>xiii</b>
<b>LIST OF TABLES</b>	<b>xv</b>
<b>LIST OF EXAMPLES</b>	<b>xvii</b>
<b>LIST OF ALGORITHMS</b>	<b>xxi</b>
<b>PREFACE</b>	<b>xxiii</b>

**PART I: LINEAR PROGRAMMING (LP)**

<b>1 LP MODELS AND APPLICATIONS</b>	<b>1</b>
1.1 A linear programming problem . . . . .	1
1.2 Linear programs and linear functions . . . . .	5
1.3 LP models and applications . . . . .	7
1.4 Exercises . . . . .	22
<b>2 LINEAR EQUATIONS AND INEQUALITIES</b>	<b>29</b>
2.1 Equivalent forms of the LP . . . . .	30
2.2 Polyhedral sets . . . . .	41
2.3 Exercises . . . . .	57
<b>3 THE SIMPLEX ALGORITHM</b>	<b>61</b>
3.1 Preliminaries . . . . .	62
3.2 A case where the sufficient condition is also necessary . .	70
3.3 Seeking another BFS . . . . .	71
3.4 Pivoting . . . . .	74
3.5 Steps of the Simplex Algorithm . . . . .	78
3.6 Exercises . . . . .	81

<b>4</b>	<b>THE SIMPLEX ALGORITHM CONTINUED</b>	<b>85</b>
4.1	Finding a feasible solution . . . . .	85
4.2	Dealing with degeneracy . . . . .	94
4.3	Revised Simplex Method . . . . .	101
4.4	Exercises . . . . .	111
<b>5</b>	<b>DUALITY AND THE DUAL SIMPLEX ALGORITHM</b>	<b>117</b>
5.1	Dual linear programs . . . . .	117
5.2	Introduction to the Dual Simplex Algorithm . . . . .	130
5.3	Exercises . . . . .	135
<b>6</b>	<b>POSTOPTIMALITY ANALYSES</b>	<b>139</b>
6.1	Changing model dimensions . . . . .	141
6.2	Ranging (Sensitivity analysis) . . . . .	153
6.3	Parametric linear programming . . . . .	159
6.4	Shadow prices and their interpretation . . . . .	173
6.5	Exercises . . . . .	178
<b>7</b>	<b>SOME COMPUTATIONAL CONSIDERATIONS</b>	<b>185</b>
7.1	Problems with explicitly bounded variables . . . . .	185
7.2	Constructing a starting (feasible) basis . . . . .	197
7.3	Steepest-edge rule for incoming column selection . . . . .	204
7.4	Structured linear programs . . . . .	208
7.5	Computational complexity of the Simplex Algorithm . . . . .	224
7.6	Exercises . . . . .	228
 <b>PART II: NONLINEAR PROGRAMMING (NLP)</b>		
<b>8</b>	<b>NLP MODELS AND APPLICATIONS</b>	<b>233</b>
8.1	Nonlinear programming . . . . .	233
8.2	Unconstrained nonlinear programs . . . . .	237
8.3	Linearly constrained nonlinear programs . . . . .	246
8.4	Quadratic programming . . . . .	249
8.5	Nonlinearly constrained nonlinear programs . . . . .	261
8.6	Exercises . . . . .	265
<b>9</b>	<b>UNCONSTRAINED OPTIMIZATION</b>	<b>271</b>
9.1	Generic Optimization Algorithm . . . . .	272
9.2	Optimality conditions for univariate minimization . . . . .	273
9.3	Finite termination versus convergence of algorithms . . . . .	276

9.4	Zero-finding methods . . . . .	278
9.5	Univariate minimization . . . . .	290
9.6	Optimality conditions for multivariate minimization . . .	299
9.7	Methods for minimizing smooth unconstrained functions .	301
9.8	Steeplength algorithms . . . . .	305
9.9	Exercises . . . . .	311
<b>10</b>	<b>DESCENT METHODS</b>	<b>317</b>
10.1	The Steepest-descent Method . . . . .	318
10.2	Newton's Method . . . . .	327
10.3	Quasi-Newton Methods . . . . .	346
10.4	The Conjugate-gradient Method . . . . .	358
10.5	Exercises . . . . .	361
<b>11</b>	<b>OPTIMALITY CONDITIONS</b>	<b>369</b>
11.1	Statement of the problem . . . . .	370
11.2	First-order optimality conditions . . . . .	371
11.3	Second-order optimality conditions . . . . .	385
11.4	Convex programs . . . . .	391
11.5	Elementary duality theory for nonlinear programming . .	395
11.6	Exercises . . . . .	408
<b>12</b>	<b>PROBLEMS WITH LINEAR CONSTRAINTS</b>	<b>419</b>
12.1	Linear equality constraints . . . . .	419
12.2	Methods for computing $Z$ . . . . .	431
12.3	Linear inequality constraints . . . . .	435
12.4	Active Set Methods . . . . .	441
12.5	Special cases . . . . .	446
12.6	Exercises . . . . .	463
<b>13</b>	<b>PROBLEMS WITH NONLINEAR CONSTRAINTS</b>	<b>469</b>
13.1	Nonlinear equality constraints . . . . .	469
13.2	Nonlinear inequality constraints . . . . .	477
13.3	Overview of algorithm design . . . . .	480
13.4	Penalty-function Methods . . . . .	482
13.5	Reduced-gradient and Gradient-projection Methods . . .	489
13.6	Augmented Lagrangian Methods . . . . .	491
13.7	Projected Lagrangian Methods . . . . .	501
13.8	Sequential Quadratic Programming (SQP) Methods . . .	504
13.9	Exercises . . . . .	512

<b>14 INTERIOR-POINT METHODS</b>	<b>517</b>
14.1 Barrier-function methods . . . . .	518
14.2 Primal barrier-function method for linear programs . . . .	525
14.3 Primal-Dual barrier function for linear programs . . . . .	529
14.4 Exercises . . . . .	533
<b>APPENDIX</b>	<b>537</b>
<b>A SOME MATHEMATICAL CONCEPTS</b>	<b>537</b>
A.1 Basic terminology and notation from set theory . . . . .	537
A.2 Norms and metrics . . . . .	540
A.3 Properties of vectors and matrices . . . . .	544
A.4 Properties of sets in $R^n$ . . . . .	548
A.5 Properties of functions on $R^n$ . . . . .	554
A.6 Convex sets . . . . .	561
A.7 Properties of convex functions . . . . .	566
A.8 Conjugate duality for convex programs . . . . .	574
A.9 Exercises . . . . .	582
<b>GLOSSARY OF NOTATION</b>	<b>585</b>
<b>BIBLIOGRAPHY</b>	<b>587</b>
<b>INDEX</b>	<b>603</b>
