

# Contents

- 1 Introduction: From Linear Algebra to Linear Analysis . . . . . 1**
  - 1.1 Three variations of Fourier Analysis . . . . . 2
    - 1.1.1 Fourier Series . . . . . 2
    - 1.1.2 The Discrete Fourier Transform . . . . . 3
    - 1.1.3 The Continuous Fourier Transform . . . . . 4
  - 1.2 Motivations . . . . . 5
    - 1.2.1 Exploration and Understanding . . . . . 5
    - 1.2.2 Manipulation . . . . . 7
    - 1.2.3 Compression . . . . . 7
  - 1.3 Linear Algebra, Linear Analysis, and Fourier Analysis . . . . . 8
    - 1.3.1 The Dot Product, Inner Product, and Orthogonality . . . . . 9
    - 1.3.2 Eigenvectors and Eigenvalues in Linear Algebra . . . . . 12
    - 1.3.3 Orthogonal Diagonalization . . . . . 14
    - 1.3.4 Diagonalization in Linear Analysis: Eigenfunctions . . . . . 14
    - 1.3.5 Fourier Analysis . . . . . 16
    - 1.3.6 Notational Differences . . . . . 16
- 2 Basic Fourier Series . . . . . 19**
  - 2.1 Fourier Series on  $L^2[a, b]$  . . . . . 19
    - 2.1.1 Calculating a Fourier Series . . . . . 22
    - 2.1.2 Periodicity and Equality . . . . . 27
    - 2.1.3 Problems and Exercises . . . . . 29
  - 2.2 Orthogonality and Hilbert Spaces . . . . . 30
    - 2.2.1 Orthogonal Expansions . . . . . 33
    - 2.2.2 Problems and Exercises: . . . . . 35
  - 2.3 The Pythagorean Theorem . . . . . 35
    - 2.3.1 The Isometry between  $L^2[a, b]$  and  $\ell^2$  . . . . . 37
    - 2.3.2 Complex Notation . . . . . 39

2.3.3	Estimating Truncation Errors	42
2.3.4	Problems and Exercises:	45
2.4	Differentiation and Convergence Rates	46
2.4.1	A Quandary between Calculus and Fourier Analysis	47
2.4.2	Derivatives and Rates of Decay	48
2.4.3	Fourier Derivatives and Induced Discontinuities	51
2.4.4	Problems and Exercises:	52
2.5	Sine and Cosine Series	53
2.5.1	Problems and Exercises:	58
2.6	Perhaps Cosine Series Only	59
2.6.1	Induced Discontinuities vs. True Discontinuities	61
2.6.2	Problems and Exercises:	62
2.7	Gibbs Ringing Phenomenon	63
2.7.1	Problems and Exercises	64
2.8	Convolution and Correlation	65
2.8.1	A couple of classic examples	67
2.8.2	Problems and Exercises:	68
2.9	Chapter Project:	70
2.10	Summary of Expansions:	71
<b>3</b>	<b>The Discrete Fourier Transform</b>	<b>75</b>
3.1	The Fourier Matrix	76
3.1.1	Orthogonality of the Fourier Matrix	77
3.2	The Complex $N$ 'th roots of unity and their structure	79
3.2.1	Problems and Exercises:	79
3.2.2	The roots of unity and frequency	81
3.2.3	Making the Fourier Matrix Understandable	82
3.2.4	Problems and Exercises:	83
3.2.5	Group structure of the roots of unity	84
3.2.6	Subgroups and Coset Representations	86
3.2.7	Problems and Exercises:	87
3.3	The Fast Fourier Transform	88
3.3.1	Speed Enabling Algorithm	89
3.3.2	The simplest examples: $F_2$ , $F_4$ , and $F_8$ .	89
3.3.3	The FFT in the Classic Case $N = 2^q$	93
3.3.4	The FFT when $N = N_1 N_2$	98
3.3.5	Problems and Exercises:	100
3.4	Discrete Convolution and Correlation	101
3.4.1	Circulant Toeplitz Matrices	103
3.5	Applications of Convolution and Correlation	105
3.5.1	Derivatives via Convolution	105
3.5.2	Averaging	109
3.5.3	Narrowband and Nonlinear filtering	110

3.5.4	Matched Filtering	112
3.5.5	Problems and Exercises:	114
3.6	Computing Sine and Cosine Expansions Using the FFT:	
	Compression	115
3.6.1	Cosine expansions	115
3.6.2	Sine expansions	117
3.6.3	Piecewise Cosine and Sine expansions	117
3.6.4	Problems and Exercises:	118
3.7	Chapter Project	119
<b>4</b>	<b>The Fourier Transform</b>	121
4.1	From Fourier Series to the Fourier Transform	121
4.2	The Fourier Isometry from $L^2(\mathbb{R})$ to $L^2(\mathbb{R})$	125
4.2.1	Problems and Exercises:	126
4.3	The Basic Theorems of Fourier Analysis	126
4.3.1	Differentiation	127
4.3.2	Translation	128
4.3.3	Convolution and Correlation	129
4.3.4	Dilation and Uncertainty	133
4.3.5	The Fourier Transform of a Gaussian	137
4.3.6	Problems and Exercises:	138
4.4	The Inverse Transform	139
4.4.1	Proving the Fourier Inversion Formula	139
4.4.2	Problems and Exercises:	141
4.5	Partition of Unity	141
4.6	Revisiting Gibbs' ringing	143
4.6.1	Problems and Exercises:	145
4.7	Suggested Test Review:	146
<b>5</b>	<b>Sampling and Interpolation</b>	149
5.1	The Shannon Sampling Theorem	150
5.1.1	Recalling Polynomial Interpolation	154
5.1.2	Shannon's Theorem: Advantages and Disadvantages	155
5.2	Advanced Interpolation Theory	156
5.2.1	Basic Ideas	156
5.2.2	Oversampling and Adaptive Windows	159
5.2.3	Interpolating Window Functions	161
5.2.4	Approximate Window functions:	164
5.2.5	Problems and Exercises:	167
5.3	Aliasing	167
5.3.1	Anti-Aliasing Filters	170
5.3.2	Problems and Exercises:	171

5.4	Numerical Computation of the Shannon Series . . . . .	171
5.4.1	Example 1: Exact Interpolation . . . . .	172
5.4.2	Example 2: Approximate Interpolation . . . . .	173
5.4.3	Problems and Exercises: . . . . .	175
5.5	Chapter Project: . . . . .	176
<b>6</b>	<b>Digital Communications . . . . .</b>	<b>177</b>
6.1	Introduction and Basic Terms . . . . .	177
6.1.1	Definitions from Communications . . . . .	180
6.2	Modulation . . . . .	181
6.2.1	Analogue vs. Digital . . . . .	181
6.2.2	AM vs FM . . . . .	182
6.2.3	RZ vs. NRZ . . . . .	183
6.3	The Eye Diagram . . . . .	184
6.3.1	Interference . . . . .	186
6.4	Fourier Constraints . . . . .	189
6.4.1	Uncertainty, Dilation, and ISI . . . . .	190
6.4.2	Uncertainty, Dilation, and CCI . . . . .	191
6.5	Statistics and Matched Filtering . . . . .	192
6.5.1	Gaussian White Noise . . . . .	195
6.5.2	Averaging Noise . . . . .	196
6.5.3	The Matched Filter . . . . .	198
6.5.4	Transmitter and Receiver Details . . . . .	201
6.5.5	Chapter Project: . . . . .	202
<b>7</b>	<b>Radar Processing . . . . .</b>	<b>205</b>
7.1	Range and Velocity Measurements . . . . .	205
7.1.1	Range Measurements . . . . .	205
7.1.2	Simple Range Resolution . . . . .	206
7.1.3	Maximum Unambiguous Range . . . . .	207
7.1.4	Velocity Estimation and Resolution . . . . .	208
7.2	Radar Range Equation . . . . .	208
7.2.1	Problems and Exercises: . . . . .	210
7.3	Signal to Noise Management in Radar . . . . .	211
7.3.1	Matched Filter . . . . .	212
7.3.2	Signal Averaging . . . . .	213
7.3.3	Heterodyne Receivers . . . . .	214
7.3.4	IF Band-Pass Filters . . . . .	216
7.3.5	Problems and Exercises: . . . . .	217
7.4	Revisiting Range Resolution: Uncertainty and Bandwidth . . . . .	218
7.5	Doppler Measurement and Resolution . . . . .	221
7.5.1	Doppler from a moving Target . . . . .	221
7.5.2	Doppler from a moving Source . . . . .	223
7.5.3	Doppler Resolution . . . . .	224

7.5.4	Problems and Exercises:	226
7.5.5	Chapter Project:	226
<b>8</b>	<b>Image Processing</b>	227
8.1	Fourier Analysis in $\mathbb{R}^n$	227
8.2	Edge Detection	229
8.2.1	Horizontal and Vertical Edges: Standard Approximations	230
8.2.2	Exact Partial Derivatives and Directional Derivatives	234
8.3	Interpolation: High-Definition TV and beyond	234
8.3.1	Revisiting Shannon and Advanced Interpolation	235
8.3.2	Regaining a .jpg image in MATLAB: Normalization and Format	238
8.4	Compression	239
8.4.1	Shannon Sampling, Compression, and Interpolation	239
8.4.2	Fourier Truncation	240
8.4.3	Periodization and Fourier Truncation	242
8.4.4	Blocking, Compressing, and Smoothing Images	244
8.4.5	Periodization and Blocking	249
8.4.6	Compressing Modern Images	250
8.5	Chapter Project:	252
<b>9</b>	<b>Medical Imaging</b>	255
9.1	Computerized Tomography	255
9.1.1	Projections, or Line Integrals of a 2-D function	256
9.1.2	The Radon Transform, or Central Slice Theorem	259
9.1.3	Filtered Backprojection	262
9.1.4	Non-locality of the Radon transform	264
9.1.5	Localized Imaging	265
9.2	Magnetic Resonance Imaging	269
9.2.1	NMR and the Larmor Frequency: Making the Moments Sing	269
9.2.2	Relaxation times: $T_1$ and $T_2$ times	271
9.2.3	MRI by way of Tomography	273
9.2.4	MRI via Phase Encoding	274
9.3	Chapter Project:	277
<b>10</b>	<b>Partial Differential Equations</b>	279
10.1	Ordinary Differential Equations: The Spring Equation	279
10.2	The Wave Equation	280
10.2.1	The Bound String Equation	280
10.2.2	Separation of Variables	281
10.2.3	Revisiting Completeness and Sine Transforms	283

10.2.4	Eigenfunctions: Musical Overtones . . . . .	284
10.2.5	Problems and Exercises: . . . . .	285
10.2.6	Two-Dimensional Wave Equation: The Square Drum . . . . .	287
10.2.7	Problems, Exercises, and Projects . . . . .	289
10.3	The Heat Equation . . . . .	291
10.3.1	A One-Dimensional Conductor . . . . .	291
10.3.2	Eigenfunctions and Examples: . . . . .	294
10.3.3	A Two-Dimensional Example: The Heat Equation on a Square Plate . . . . .	294
10.3.4	Problems, Exercises, and Projects: . . . . .	297
	<b>Bibliography</b> . . . . .	299
	<b>Index</b> . . . . .	301

Applied Fourier Analysis

From Signal Processing to Medical Imaging

Olson, T.

2017, XVI, 302 p. 126 illus., 118 illus. in color. With  
online files/update., Hardcover

ISBN: 978-1-4939-7391-0
