1	Historical Background	1
	References.	9
2	Geometry of Gauge Fields	13
2.1	Differentiable Manifolds	14
2.2	Tensor Fields and Exterior Forms.	17
2.3	Fiber Bundles as an Enlarged Geometric Arena	19
2.4	Associated Bundles and Physical Fields	22
2.5	Connection and Covariant Derivative	23
2.6	Curvature	26
2.7	Gauge Transformations.	28
2.8	Topological Invariants	30
	References.	33
3	Maxwell and Yang–Mills Theory	37
3.1	The Lagrangian Formalism.	37
3.2	G-Equivalence Principle	39
3.3	Maxwell’s Theory in Differential Forms.	41
3.3.1	Constrained BF Scheme for Maxwell Fields	45
3.4	Yang–Mills Fields	47
3.5	Instantons	51
3.6	Relation to the Seiberg–Witten Equations.	54
3.7	Higgs Fields	56
3.8	Translation of Terminologies	60
	References.	60
4	Gravitation as a Gauge Theory	65
4.1	Affine Frames.	67
4.2	Affine Gauge Theory with Torsion.	71
4.2.1	Affine “Higgs” Mechanism	73

4.3	Metric Structure of the “Spontaneously Broken” Poincaré Gauge Theory	76
4.4	Gravitational Field Equations	82
4.4.1	Bianchi Identities and their Contractions	84
4.5	Noether Identities	86
4.5.1	Mass and Spin of the Kerr–AdS Solution	89
4.6	Gravitational Aharonov–Bohm Effect and Cartan Circuits	90
	References.	92
5	Einstein–Cartan Theory	95
5.1	Introduction	95
5.2	Dirac Fields in Riemann–Cartan Spacetime	96
5.3	Classical Einstein–Cartan Theory	97
5.3.1	Effective Einstein Equations	99
5.4	Asymptotic Safety of EC Theory?	101
5.4.1	The Issue of Four-Fermion Interactions	103
5.5	Constraints from the Weak Equivalence Principle	104
	References.	104
6	Teleparallelism.	109
6.1	Chiral Teleparallelism.	109
6.2	Parity-Violating Topological Invariants in Gravity	110
6.2.1	From Chern–Simons to Einsteinian Gravity	112
6.2.2	Yang–Mills-Type Formulation of Complex $GR_{ }$	113
6.3	Energy–Momentum Complex	116
6.4	Hamiltonian Formulation of Complex $GR_{ }$	117
6.4.1	Poisson Brackets	120
6.4.2	Chern–Simons Solutions of the Chiral Teleparallelism Constraints	121
6.4.3	Torsion Instantons	122
6.5	Wilson Loops and Links.	124
6.6	Topology of Cartan Circuits?	125
6.7	Topologically Modified Einstein–Cartan Theory	127
6.8	Dynamics of Quadratic Poincaré Gauge Theory	129
6.9	CP Violation in Quantum Gravity?	131
	References.	133
7	Yang’s Theory of Gravity	137
7.1	Introduction	137
7.2	Dual Conformal Structure	138
7.3	SKY Gravity.	140
7.3.1	Double-Dual SKY Gravity	141
7.4	The Path Integral Dominated by Einstein Spaces	142
7.5	Graviton Spectrum	144
7.6	Mass Gap in Yang–Mielke Theory of Gravity?	145

7.7	Field Redefinition Scheme of Renormalization	146
7.7.1	Legendre Transformation	147
7.7.2	Vanishing Hessian: GR as a Stable Fixed Point	148
	Appendix: Clifford-Algebra-Valued Exterior Forms	149
	References	156
8	BRST Quantization of Gravity	161
8.1	Introduction	161
8.2	Topological BRST Transformations of Gauge Fields	162
8.3	BRST Quantization of Translations	164
8.3.1	Diffeomorphisms	165
8.4	Topological Gravity Action	166
8.4.1	Effective Self-dual SKY Gravity	168
8.5	Symmetry Breaking Via Duality Rotations	169
8.6	Generalized Double Duality	170
8.6.1	Classical GR by Constraining Torsion to Vanish	174
8.6.2	Effective Einsteinian “Background”	175
	References	176
9	Gravitational Instantons	181
