
Contents

1	Current Global Challenges, the Concept of Adaptive Architecture, and the Possibilities of Information Materials	1
1.1	Introduction	1
1.2	Global Developments and Their Relevance for the Architectural Discourse	3
1.2.1	Technological Advancements	3
1.2.2	Demographic Growth	4
1.2.3	Socio-anthropological Trends	5
1.3	Challenges for Architecture and Building	6
1.3.1	Junkspace or the Loss of Architectural Identity	8
1.3.2	Superficiality and the Digitization of Materiality	8
1.4	Flexibility as a Spatial Method to Address Change and Progress	9
1.4.1	Adaptive Architecture	11
1.4.2	Types of Adaptive Architecture	12
1.4.3	Material Intelligence	12
1.5	Information Materials	13
1.5.1	Potential of Information Materials for Architectural Usage	15
1.5.2	Shortcomings of Current Information Material Usage	16
1.6	Toward a New Softness	17
1.6.1	A Different Kind of Material Thinking	18
1.6.2	Structure of the Book	19
1.6.3	Line of Argumentation	19
	References	21
2	The Ever-Changing Nature of Materiality and the Meaning of Materials in Architecture and Construction	25
2.1	Introduction	25
2.1.1	Structure of the Present Chapter	27
2.2	Natural Materials	29
2.2.1	The Influence of Vitruvian Thought on Current New Materialism Positions	30

2.2.2	The Growing Detachment of Form from Materiality	32
2.2.3	The Domination of Human Intellect Over Natural Materiality	34
2.3	Industrial Materials	36
2.3.1	Durand's Grammars in Relation to Schumacher's Parametricism.	38
2.3.2	The Intellectual Emancipation of Form from Materiality	39
2.3.3	Technological and Material Advancement During the Industrial Revolution	40
2.3.4	Functionality Takes Precedence Over Aesthetics and Form	41
2.4	Synthetic Materials.	42
2.4.1	The Age of Plastics	43
2.4.2	Utopian Visions for a Better Tomorrow	44
2.5	Intermediate Summary and Conclusion.	45
2.6	Digital Materials	46
2.6.1	The Emergence of Digital Design and Fabrication Techniques	48
2.6.2	New Instruments for the Architectural Design Practice	49
2.6.3	The Digital Chain: From Design to Production	51
2.7	Information Materials	52
2.7.1	Programmable Matter.	52
2.7.2	The Soft Kinetics of Smart Materials.	53
2.7.3	Definitions of Smart Materials	54
2.7.4	Concepts for Information Materials Usage in Architecture	56
2.7.5	Material Behavior in Regards to Energy, Time, and Space	58
2.8	Final Summary and Conclusion	60
	References	62

3 Materiability—An Attempt for the Education of an Information Material Literacy in Respect to Emerging Materials

		67
3.1	Introduction	67
3.2	The Process of Physical Making	70
3.2.1	The Inherent Dynamics of Information Materials	71
3.2.2	The Educational Framework of the Materiability Approach	71
3.3	Access to Information	73
3.3.1	Approaches for the Mediation of Material Knowledge	75
3.3.2	The Materiability Research Network: Access to Information Materials	76

3.4	Information Material Literacy	77
3.4.1	Collective Making in the Third Industrial Revolution	78
3.4.2	The Materiability Research Network: A Growing Community	79
3.5	Summary and Conclusion	81
	References	82
4	A Selection of Emerging Information Materials, Their Properties, Fabrication, and Application in Speculative Spatial Installations	85
4.1	Introduction	85
4.2	Aerogels	86
4.2.1	History.	86
4.2.2	Material Structure and Synthesis	87
4.2.3	Fabrication	90
4.2.4	Applications	95
4.3	Bioluminescence	95
4.3.1	History.	96
4.3.2	Material Structure and Operation.	96
4.3.3	Fabrication	99
4.3.4	Applications	101
4.4	Bioplastics	102
4.4.1	History.	102
4.4.2	Material Structure and Synthesis	103
4.4.3	Fabrication	106
4.4.4	Case Studies.	108
4.4.5	Applications	110
4.5	Dye-Sensitized Solar Cells	111
4.5.1	History.	112
4.5.2	Material Structure and Operation.	112
4.5.3	Fabrication	113
4.5.4	Case Studies.	116
4.5.5	Applications	119
4.6	Electroluminescent Displays	119
4.6.1	History.	120
4.6.2	Material Structure and Operation.	121
4.6.3	Fabrication	122
4.6.4	Case Studies.	126
4.6.5	Applications	129
4.7	Electroactive Polymers	130
4.7.1	History.	130
4.7.2	Material Structure and Operation.	131
4.7.3	Fabrication	132
4.7.4	Case Studies.	135
4.7.5	Applications	137
4.8	Soft Robotics	138
4.8.1	Material Structure and Operation.	139
4.8.2	Fabrication	141

4.8.3	Case Studies	143
4.8.4	Applications	144
4.9	Thermochromics	145
4.9.1	History.	145
4.9.2	Material Structure and Operation.	146
4.9.3	Fabrication	148
4.9.4	Case Studies.	152
4.9.5	Applications	159
4.10	Summary and Conclusion	160
	References	161
5	Towards a New Softness.	167
5.1	Introduction and Book Summary	167
5.2	Thinking Information Materials	169
5.2.1	How Has Material Development and Usage Evolved in Architecture Over the Course of Time and How Has This Influenced the Practice and Education of the Architect?	169
5.2.2	What Is the Current Meaning and Usage of Information Materials in Architecture and How Might It Change in the Future?	170
5.2.3	What Are Didactic Models that Focus on the Mediation of Dynamics, Processes, and Behaviors and How Can Explorative Material Research Become a Vital Aspect of Architectural Education?	171
5.2.4	How Can a Distinct Pedagogic Approach Be Evaluated and How Can Research Results Be Disseminated to a Large, Global Audience?	172
5.3	Liquid Architecture	173
5.4	Towards a New Softness	175
	References	178
	Appendix A.	181
	Glossary	189

Information Materials

Smart Materials for Adaptive Architecture

Kretzer, M.

2017, XII, 191 p. 226 illus., 193 illus. in color.,

Hardcover

ISBN: 978-3-319-35148-3
