Part I Mechanics

1	Introduction; Distance and Time Measurements	3
1.1	Introduction	3
1.2	Distance and Length Measurements. Direct Distance Measurements	4
1.3	The Meter as a Unit of Length	6
1.4	Indirect Length Measurements of Very Large Distances	7
1.5	Angle Measurements	9
1.6	Time Determinations. True Time Measurements	10
1.7	Clocks and Graphical Registration	11
1.8	Measurement of Periodic Sequences of Equal Times and Lengths	13
1.9	Indirect Time Measurements	15
	Exercises	16
2	The Description of Motion: Kinematics	17
2.1	Definition of Motion. Frames of Reference	17
2.2	Definition of Velocity. Example of a Velocity Measurement	18
2.3	Definition of Acceleration: The Two Limiting Cases	20
2.4	Path Acceleration and Linear Motion	22
2.5	Constant Radial Acceleration and Circular Orbits	26
2.6	Distinguishing Physical Quantities and Their Numerical Values	28
2.7	Base Quantities and Derived Quantities	29
	Exercises	30
3	Fundamentals of Dynamics	31
3.1	Force and Mass	31
3.2	Measurements of Force and Mass. NEWTON's Fundamental Equation of Motion	34

3.3	The Units of Force and Mass. Expressions Containing Physical Quantities	38
3.4	Density and Specific Volume	38
	Exercises	39
4	Applications of NEWTON's Equation	41
4.1	Constant Acceleration in a Straight Line	41
4.2	Circular Motion and Radial Forces	44
4.3	Sinusoidal Oscillations: The Gravity Pendulum as a Special Case . . .	49
4.4	Motions Around a Central Point	54
4.5	Elliptical Orbits and Elliptically Polarized Oscillations	56
4.6	LISSAJOUS Orbits	57
4.7	KEPLER's Elliptical Orbits and the Law of Gravity	58
4.8	The Gravitational Constant	60
4.9	The Law of Gravity and Celestial Mechanics	62
	Exercises	65
5	Three Useful Concepts: Work, Energy, and Momentum	67
5.1	Preliminary Remarks	67
5.2	Work and Power	67
5.3	Energy and Its Conservation	71
5.4	First Applications of the Conservation Law of Mechanical Energy . .	74
5.5	Impulse and Momentum	75
5.6	Momentum Conservation	76
5.7	First Applications of Momentum Conservation	77
5.8	Momentum and Energy Conservation During Elastic Collisions of Objects	79
5.9	Momentum Conservation in Inelastic Collisions and the Ballistic Pendulum	80
5.10	Non-Central Collisions	82
5.11	Motions Against Dissipative Forces	82
5.12	The Production of Forces with and without Consuming Power . . .	86
5.13	Closing Remarks	87
	Exercises	88

6	Rotational Motion of Rigid Bodies	91
6.1	Introductory Remarks	91
6.2	Definition of Torque	91
6.3	The Production of Known Torques, the Constant D^* , and the Angular Velocity ω	94
6.4	The Moment of Inertia, Equation of Motion for Rotations, Torsional Oscillations	97
6.5	The Physical Pendulum and the Beam Balance	102
6.6	Angular Momentum	104
6.7	Free Axes	108
6.8	Free Axes of Humans and Animals	111
6.9	Definition of the Spinning Top and Its Three Axes	112
6.10	The Nutation of a Force-Free Top and Its Fixed Spin Axis	115
6.11	Tops Acted on by Torques. Precession of the Angular-Momentum Axis	117
6.12	Precession Cone with Nutation	121
6.13	A Top with Only Two Degrees of Freedom	123
	Exercises	125
7	Accelerated Frames of Reference	129
7.1	Preliminary Remarks. Inertial Forces	129
7.2	Frames of Reference with Only Path Acceleration	130
7.3	Frames of Reference with Radial Acceleration. Centrifugal and CORIOLIS Forces	133
7.4	Vehicles as Accelerated Frames of Reference	141
7.5	The Gravity Pendulum as a Plumb Bob in Accelerated Vehicles	144
7.6	Earth as an Accelerated Frame of Reference. Centrifugal Acceleration of Bodies at Rest	146
7.7	Earth as an Accelerated Frame of Reference. CORIOLIS Force on Moving Bodies	148
	Exercises	151
8	Some Properties of Solids	153
8.1	Preliminary Remarks	153
8.2	Elastic Deformation, Flow and Solidification	153
8.3	HOOKE'S Law and POISSON'S Relation	155
8.4	Shear Stress	156

8.5	Normal, Shear and Principal Stress	157
8.6	Bending and Twisting (Torsion)	160
8.7	Time Dependence of Deformation. Elastic Aftereffects and Hysteresis	165
8.8	Rupture Strength and Specific Surface Energy of Solids	167
8.9	Sticking and Sliding Friction	169
8.10	Rolling Friction	172
	Exercises	173
9	Liquids and Gases at Rest	175
9.1	The Free Displacements of Liquid Molecules	175
9.2	Pressure in Liquids. Manometers	178
9.3	The Isotropy of Pressure and Its Applications	179
9.4	The Pressure Distribution in a Gravitational Field. Buoyancy	182
9.5	Cohesion of Liquids: Tensile Strength, Specific Surface Energy, and Surface Tension	185
9.6	Gases as Low-Density Liquids Without Surfaces. BOYLE'S Law	193
9.7	A Model Gas. Pressure Due to Random Molecular Motions (Thermal Motion)	195
9.8	The Fundamental Equation of the Kinetic Theory of Gases. Velocity of the Gas Molecules	196
9.9	The Earth's Atmosphere. Atmospheric Pressure in Demonstration Experiments	198
9.10	The Pressure Distribution of Gases in the Gravitational Field. The Barometric Pressure Formula	202
9.11	Static Buoyancy in Gases	205
9.12	Gases and Liquids in Accelerated Frames of Reference	206
	Exercises	208
10	Motions in Liquids and Gases	211
10.1	Three Preliminary Remarks	211
10.2	Internal Friction and Boundary Layers	211
10.3	Laminar Flow: Fluid Motions Which Occur when Friction Plays a Decisive Role	214
10.4	The REYNOLDS Number	217
10.5	Frictionless Fluid Motion and BERNOULLI'S Equation	220

10.6	Flow Around Obstacles. Sources and Sinks. Irrotational or Potential Flows	226
10.7	Rotations of Fluids and Their Measurement. The Irrotational Vortex Field	228
10.8	Vortices and Separation Surfaces in Nearly Frictionless Fluids	232
10.9	Flow Resistance and Streamline Profiles	234
10.10	The Dynamic Transverse Force or Lift	237
10.11	Applications of the Transverse Force	241
	Exercises	244

Part II Vibrations and Waves

11	Vibrations	247
11.1	Preliminary Remarks	247
11.2	Producing Undamped Vibrations	247
11.3	The Synthesis of Non-Sinusoidal Periodic Processes from Sine Curves	251
11.4	The Spectral Representation of Complex Oscillatory Processes	256
11.5	Elastic Transverse Vibrations of Linear Solid Bodies Under Tensile Stress	259
11.6	Elastic Longitudinal and Torsional Vibrations of Stressed Linear Solid Bodies	263
11.7	Elastic Vibrations in Columns of Liquids and Gases	265
11.8	Normal Modes of Stiff Linear Bodies	269
11.9	Normal Modes of 2-Dimensional and 3-Dimensional Bodies. Thermal Vibrations	271
11.10	Forced Oscillations	273
11.11	Energy Transfer Stimulated by Resonance	278
11.12	The Importance of Resonance for the Detection of Pure Sinusoidal Oscillations. Spectral Apparatus	279
11.13	The Importance of Forced Oscillations for Distortion-Free Recording of Non-Sinusoidal Oscillations	281
11.14	The Amplification of Oscillations	282
11.15	Two Coupled Oscillators and Their Forced Oscillations	283
11.16	Damped and Undamped Wobble Oscillations	286
11.17	Relaxation (or Toggle) Oscillations	288
	Exercises	289

12 Travelling Waves and Radiation 291

12.1 Travelling Waves 291

12.2 The DOPPLER Effect 293

12.3 Interference 295

12.4 Interference with Two Slightly Different Source Frequencies 296

12.5 Standing Waves 297

12.6 The Propagation of Travelling Waves 299

12.7 Reflection and Refraction 302

12.8 Image Formation 303

12.9 Total Reflection 304

12.10 Shockwaves when the Wave Velocity Is Exceeded 307

12.11 HUYGHENS’ Principle 308

12.12 Model Experiments on Wave Propagation 309

12.13 Quantitative Results for Diffraction by a Slit 311

12.14 FRESNEL’S Zone Construction 315

12.15 Narrowing of the Interference Fringes
by a Lattice Arrangement of the Wave Sources 317

12.16 Interference of Wave Trains of Limited Length 321

12.17 The Production of Longitudinal Waves and Their Velocities 321

12.18 High-Frequency Longitudinal Waves in Air. The Acoustic Replica
Method 323

12.19 The Radiation Pressure of Sound. Sound Radiometers 326

12.20 Reflection, Refraction, Diffraction and Interference
of 3-Dimensional Waves 328

12.21 The Origin of Waves on Liquid Surfaces 336

12.22 Dispersion and the Group Velocity 341

12.23 The Excitation of Waves by Aperiodic Processes 345

12.24 The Energy of a Sound Field. The Wave Resistance for Sound Waves 347

12.25 Sound Sources 351

12.26 Aperiodic Sound Sources and Supersonic Velocities 354

12.27 Sound Receivers 355

12.28 The Sense of Hearing 356

12.29 Phonometry 360

12.30 The Human Ear 362

Exercises 365

Part III Thermodynamics

13	Fundamentals	369
13.1	Preliminary Remarks. Definition of the Concept 'Amount of Substance'	369
13.2	The Definition and Measurement of Temperature	370
13.3	The Definitions of the Concepts of Heat and Heat Capacity	374
13.4	Latent Heat	377
	Exercise	380
14	The First Law and the Equation of State of Ideal Gases	381
14.1	Work of Expansion and Technical Work	381
14.2	Thermal State Variables	384
14.3	The <i>Internal Energy</i> U and the First Law	384
14.4	The State Function <i>Enthalpy</i> , H	386
14.5	The Two Specific Heats, c_p and c_v	388
14.6	The Thermal Equation of State of Ideal Gases. Absolute Temperatures	390
14.7	Addition of Partial Pressures	394
14.8	The Caloric Equations of State of Ideal Gases. GAY-LUSSAC's Throttle Experiment	395
14.9	Changes of State of Ideal Gases	398
14.10	Applications of Polytropic and Adiabatic Changes of State. Measurements of κ	403
14.11	Pneumatic Motors and Gas Compressors	406
	Exercises	407
15	Real Gases	409
15.1	Phase Changes of Real Gases	409
15.2	Distinguishing the Gas from the Liquid	411
15.3	The VAN DER WAALS Equation of State for Real Gases	414
15.4	The JOULE-THOMSON Throttle Experiment	416
15.5	The Production of Low Temperatures and Liquefaction of Gases	418
15.6	Technical Liquefaction Processes and the Separation of Gases	420
15.7	Vapor Pressure and Boiling Temperature. The Triple Point	421
15.8	Hindrance of the Phase Transition Liquid \rightarrow Solid: Supercooled Liquids	424
15.9	Hindrance of the Phase Transition Liquid \leftrightarrow Gas: The Tensile Strength of Liquids	425
	Exercise	426

16	Heat as Random Motion	429
16.1	Temperature on the Molecular Scale	429
16.2	The Recoil of Gas Molecules Upon Reflection. The “Radiometer Force”	433
16.3	The Velocity Distribution and the Mean Free Path of the Gas Molecules	435
16.4	Molar Heat Capacities in a Molecular Picture. The Equipartition Principle	437
16.5	Osmosis and Osmotic Pressure	440
16.6	The Experimental Determination of BOLTZMANN’s Constant k from the Barometric Equation	445
16.7	Statistical Fluctuations and the Particle Number	447
16.8	The BOLTZMANN Distribution	449
17	Transport Processes: Diffusion and Heat Conduction	453
17.1	Preliminary Remarks	453
17.2	Diffusion and Mixing	453
17.3	FICK’s First Law and the Diffusion Constant	454
17.4	Quasi-Stationary Diffusion	457
17.5	Non-Stationary Diffusion	459
17.6	General Considerations on Heat Conduction and Heat Transport	460
17.7	Stationary Heat Conduction	463
17.8	Non-Stationary Heat Conduction	464
17.9	Transport Processes in Gases and Their Lack of Pressure Dependence	465
17.10	Determination of the Mean Free Path	468
17.11	The Mutual Relations of Transport Processes in Gases	470
18	The State Function Entropy, S	475
18.1	Reversible Processes	475
18.2	Irreversible Processes	477
18.3	Measurement of the Irreversibility Using the State Function <i>entropy</i>	479
18.4	Entropy in a Molecular Picture	482
18.5	Examples of the Calculation of the Entropy	483
18.6	Application of Entropy to Reversible Changes of State in Closed Systems	487
18.7	The H - S or MOLLIER Diagram with Applications. Supersonic Gas Jets	488
	Exercise	493

19	Converting Heat into Work. The Second Law	495
19.1	Heat Engines and the Second Law	495
19.2	The CARNOT Cycle	497
19.3	The STIRLING Engine	498
19.4	Technical Heat Engines	500
19.5	Heat Pumps (Refrigeration Devices)	501
19.6	The Thermodynamic Definition of Temperature	504
19.7	Pneumatic Motors. Free and Bound Energy	504
19.8	Examples of Applications of the Free Energy	506
19.9	The Human Body as an Isothermal Engine	509
	Exercise	510
	Table of Physical Constants	511
	Solutions to the Exercises	512
	Index	518

Pohl's Introduction to Physics

Volume 1: Mechanics, Acoustics and Thermodynamics

Lüders, K.; Pohl, R.O. (Eds.)

2017, XXVII, 525 p. 509 illus.,
