## Part I    Toolbox

<b>1</b>	<b>Mathematical Preliminaries</b>	3
1.1	Coordinate Systems	3
1.2	Vectors	3
1.3	Tensors	4
1.3.1	Second-Order Tensors	4
1.3.2	Third- and Fourth-Order Tensors	9
1.4	Coordinate Transformation	10
1.5	Calculus	11
1.5.1	Gradient and Divergence. Taylor’s Theorem	11
1.5.2	The Divergence Theorem	12
1.5.3	Time-Varying Fields	12
	References	13
<b>2</b>	<b>Continuum Mechanics</b>	15
2.1	Introduction	15
2.2	Motion in a Rotating Coordinate System	16
2.2.1	Vectors and Tensors	16
2.2.2	Velocity and Acceleration	17
2.3	Kinematics	18
2.4	Simple Motions	20
2.4.1	Example 1: Pure Rotation	20
2.4.2	Example 2: General Rigid Body Motion	21
2.4.3	Example 3: Homogeneous Motion	22
2.4.4	Example 4: Affine Motion	22
2.5	Local Motion	23
2.5.1	Strain. Surface Change. Volume Change	24
2.5.2	Rate of Local Motion	25
2.5.3	Transport Theorem. Mass Balance	27

2.6	Further Analysis of Simple Motions . . . . .	29
2.6.1	Example 3: Homogeneous Motion . . . . .	29
2.6.2	Example 4: Affine Motion . . . . .	31
2.7	Stress . . . . .	32
2.8	Moments of the Stress Tensor . . . . .	33
2.9	Power Balance. . . . .	36
2.10	Constitutive Laws . . . . .	37
2.10.1	Rigid-Perfectly Plastic Materials. . . . .	38
2.10.2	Material Parameters . . . . .	44
	References . . . . .	48
<b>3</b>	<b>Affine Dynamics.</b> . . . .	<b>51</b>
3.1	Introduction. . . . .	51
3.2	Governing Equations: Structural Motion . . . . .	53
3.2.1	Statics. . . . .	55
3.3	Moment Tensors . . . . .	56
3.3.1	Gravitational-Moment Tensor. . . . .	57
3.3.2	Tidal-Moment Tensor . . . . .	59
3.4	Governing Equations: Orbital Motion . . . . .	62
3.4.1	Circular Tidally-Locked Orbits. . . . .	64
3.5	Conservation Laws. . . . .	67
3.5.1	Angular Momentum Balance . . . . .	67
3.5.2	Power Balance. . . . .	68
3.5.3	Total Energy of a Deformable Gravitating Ellipsoid . . . . .	70
	References . . . . .	71
 <b>Part II Equilibrium</b>		
<b>4</b>	<b>Asteroids.</b> . . . .	<b>75</b>
4.1	Introduction. . . . .	75
4.2	Governing Equations . . . . .	76
4.2.1	Average Stresses . . . . .	76
4.2.2	Non-dimensionalization. . . . .	78
4.2.3	Coordinate System . . . . .	78
4.3	Equilibrium Landscape . . . . .	79
4.3.1	Oblate Asteroids. . . . .	83
4.3.2	Prolate Asteroids . . . . .	84
4.3.3	Triaxial Asteroids. . . . .	84
4.4	Discussion . . . . .	86
4.5	Applications . . . . .	88
4.5.1	Material Parameters . . . . .	88
4.5.2	Near-Earth Asteroid Data . . . . .	88
4.5.3	Equilibrium Shapes. . . . .	89

4.6	Summary . . . . .	92
	References . . . . .	92
<b>5</b>	<b>Satellites . . . . .</b>	<b>95</b>
5.1	Introduction. . . . .	95
5.2	Governing Equations . . . . .	96
5.2.1	Average Stress. . . . .	97
5.2.2	Orbital Motion. . . . .	98
5.2.3	Non-dimensionalization. . . . .	98
5.2.4	Coordinate System . . . . .	100
5.3	Example: Satellites of Oblate Primaries. . . . .	101
5.3.1	$\mathbf{B}_P^{(0)}$ and $\mathcal{B}_P^{(1)}$ . . . . .	102
5.3.2	The Orbital Rate $\omega_E''$ . . . . .	103
5.3.3	Equilibrium Landscape . . . . .	103
5.4	Application: The Roche Problem . . . . .	110
5.4.1	Material Parameters . . . . .	111
5.4.2	Moons of Mars . . . . .	112
5.4.3	Alternate Yield Criteria and Previous Work. . . . .	113
5.5	Application: Satellites of the Giant Planets . . . . .	116
5.5.1	Satellite Data . . . . .	118
5.5.2	Locations . . . . .	120
5.5.3	Discussion. . . . .	120
5.6	Summary . . . . .	125
	References . . . . .	126
<b>6</b>	<b>Binaries. . . . .</b>	<b>129</b>
6.1	Introduction. . . . .	129
6.2	Governing Equation . . . . .	130
6.2.1	Average Stresses . . . . .	131
6.2.2	Orbital Motion. . . . .	132
6.2.3	Non-dimensionalization. . . . .	132
6.2.4	Coordinate Systems . . . . .	134
6.3	Example: Prolate Binary System . . . . .	135
6.3.1	$\mathbf{B}^{(0)}$ , $\mathcal{B}^{(1)}$ and $\mathbf{B}^{(2)}$ . . . . .	136
6.3.2	The Orbital Rate $\omega_B$ . . . . .	137
6.4	Equilibrium Landscape . . . . .	137
6.5	Example: Fluid Binaries and the Roche Binary Approximation. . . . .	145
6.6	Application: Binary Asteroids . . . . .	148
6.6.1	216 Kleopatra . . . . .	151
6.6.2	25143 Itokawa. . . . .	154
6.6.3	624 Hektor . . . . .	155
6.6.4	90 Antiope . . . . .	157
6.7	Summary . . . . .	158
	References . . . . .	158

## Part III Stability

<b>7</b>	<b>Granular Materials</b>	163
7.1	Introduction.	163
7.2	Stability	164
7.2.1	Coordinate System	165
7.2.2	Energy Criterion.	167
7.2.3	Compatibility and Normality	172
7.2.4	Stability at First-Order	173
7.2.5	Stability at Second-Order	175
7.2.6	Stability to Finite Perturbations	175
	References	177
<b>8</b>	<b>Asteroids</b>	179
8.1	Introduction.	179
8.2	Asteroid Dynamics.	180
8.3	Stability	182
8.3.1	Coordinate System	182
8.3.2	Energy Criterion.	185
8.4	Example: Rubble-Pile Asteroids.	187
8.4.1	Compatible Perturbations.	189
8.4.2	Local Stability	190
8.4.3	Stability to Finite Perturbations	193
8.5	Application: Near-Earth Asteroids	196
8.5.1	Near-Earth Asteroid Data	196
8.5.2	Local Stability	198
8.5.3	Planetary Encounters	200
8.6	Summary	204
	References	205
<b>9</b>	<b>Satellites</b>	207
9.1	Introduction.	207
9.2	Satellite Dynamics	208
9.2.1	Structural Deformation	208
9.2.2	Orbital Motion	210
9.3	Stability	211
9.3.1	Coordinate System	211
9.3.2	Energy Criterion.	213
9.4	Example: Rubble-Pile Planetary Satellites	218
9.4.1	Orbital Stability	218
9.4.2	Structural Stability	221
9.4.3	Local Stability	222
9.4.4	Stability to Finite Structural Perturbations	225
9.5	Application: Planetary Satellites.	228
9.5.1	Local Stability	228
9.5.2	Stability to Finite Structural Perturbations	233

9.6	Summary . . . . .	235
	References . . . . .	236
<b>10</b>	<b>Binaries. . . . .</b>	<b>237</b>
10.1	Introduction. . . . .	237
10.2	Binary Dynamics . . . . .	238
10.2.1	Structural Motion . . . . .	239
10.2.2	Orbital Motion . . . . .	241
10.3	Stability . . . . .	242
10.3.1	Coordinate System . . . . .	243
10.3.2	Admissible Perturbations . . . . .	245
10.3.3	Energy Criterion. . . . .	247
10.4	Components . . . . .	250
10.5	Example: Planar Binary with Near-Spherical, Rigid Members . . . . .	250
10.6	Example: Rigid Binaries . . . . .	252
10.6.1	Orbital Kinetic Energy . . . . .	254
10.6.2	Structural Kinetic Energy . . . . .	255
10.6.3	Perturbations . . . . .	256
10.6.4	Stability . . . . .	256
10.7	Example: Rubble-Pile Binaries. . . . .	261
10.7.1	Orbital Kinetic Energy . . . . .	261
10.7.2	Structural Kinetic Energy . . . . .	263
10.7.3	Perturbations . . . . .	264
10.7.4	Local Stability . . . . .	265
10.7.5	Stability to Finite Structural Perturbations . . . . .	270
10.8	Application: Near-Earth Binaries . . . . .	272
10.8.1	216 Kleopatra . . . . .	272
10.8.2	25143 Itokawa . . . . .	275
10.8.3	624 Hektor . . . . .	276
10.8.4	90 Antiope . . . . .	276
10.8.5	Stability to Finite Structural Perturbations . . . . .	277
10.9	Summary . . . . .	281
	References . . . . .	281

## Part IV Dynamics

<b>11</b>	<b>Formation . . . . .</b>	<b>285</b>
11.1	Introduction. . . . .	285
11.2	Governing Equations . . . . .	285
11.2.1	Non-dimensionalization. . . . .	288
11.2.2	Components . . . . .	289
11.3	Example: Prolate Asteroids . . . . .	290
11.3.1	Switching States. . . . .	291
11.3.2	Numerical Algorithm . . . . .	292

11.3.3	Application: Equilibrium Shapes . . . . .	293
11.3.4	Discussion: Dynamics of a Homogeneously Deforming Rigid—Plastic Ellipsoid . . . . .	298
11.4	Summary . . . . .	305
	References . . . . .	305
<b>12</b>	<b>Tidal Flybys . . . . .</b>	<b>307</b>
12.1	Introduction. . . . .	307
12.2	Setup . . . . .	308
12.3	Governing Equations . . . . .	310
12.4	Material Behavior . . . . .	312
12.4.1	A Kinetic Theory Based Model for Loose Granular Aggregates. . . . .	312
12.4.2	Transition Criterion . . . . .	315
12.5	Results . . . . .	316
12.5.1	Outcomes with the Tensile Criterion. . . . .	317
12.5.2	The Roche Limit . . . . .	319
12.5.3	Further Analysis of Flybys . . . . .	321
12.5.4	Outcomes with the Mohr-Coulomb Criterion . . . . .	328
12.5.5	The Effect of Rotation Direction. . . . .	329
12.5.6	Different Initial Rotation Rates. . . . .	333
12.6	Summary . . . . .	334
	References . . . . .	334
	<b>Appendix A: Rate of Change of the Gravitational Shape Tensor. . . . .</b>	<b>337</b>
	<b>Appendix B: The Tidal Shape Tensor . . . . .</b>	<b>341</b>
	<b>Appendix C: Rate of Change of the Tidal Shape Tensor. . . . .</b>	<b>345</b>
	<b>Index . . . . .</b>	<b>349</b>

Shapes and Dynamics of Granular Minor Planets  
The Dynamics of Deformable Bodies Applied to Granular  
Objects in the Solar System

Sharma, I.

2017, XX, 354 p. 116 illus., 25 illus. in color., Hardcover

ISBN: 978-3-319-40489-9
