|----------|--|-----------|
| <b>1</b> | <b>Introduction</b>                                      | <b>1</b>  |
| 1.1      | Feedback in Engineering and Living Systems               | 1         |
| 1.2      | Benefits of Feedback Control                             | 3         |
| 1.3      | Challenges of Feedback Control                           | 6         |
| 1.4      | Feedback Turbulence Control is a Grand Challenge Problem | 7         |
| 1.5      | Nature Teaches Us the Control Design                     | 8         |
| 1.6      | Outline of the Book                                      | 9         |
| 1.7      | Exercises  | 9         |
| <b>2</b> | <b>Machine Learning Control (MLC)</b>                    | <b>11</b> |
| 2.1      | Methods of Machine Learning                              | 12        |
| 2.1.1    | System Identification as Machine Learning                | 13        |
| 2.1.2    | Genetic Algorithms                                       | 14        |
| 2.1.3    | Genetic Programming                                      | 16        |
| 2.1.4    | Additional Machine Learning Methods                      | 18        |
| 2.2      | MLC with Genetic Programming                             | 19        |
| 2.2.1    | Control Problem  | 19        |
| 2.2.2    | Parameterization of the Control Law                      | 20        |
| 2.2.3    | Genetic Programming as a Search Algorithm                | 21        |
| 2.2.4    | Initializing a Generation                                | 23        |
| 2.2.5    | Evaluating a Generation                                  | 24        |
| 2.2.6    | Selecting Individuals for Genetic Operations             | 26        |
| 2.2.7    | Selecting Genetic Operations                             | 27        |
| 2.2.8    | Advancing Generations and Stopping Criteria              | 30        |
| 2.3      | Examples   | 33        |
| 2.3.1    | Fitting a Function Through Data Points                   | 33        |
| 2.3.2    | MLC Applied to Control a Dynamical System                | 36        |
| 2.4      | Exercises  | 44        |
| 2.5      | Suggested Reading  | 45        |
| 2.6      | Interview with Professor Marc Schoenauer                 | 46        |

|          |   |     |
|----------|---|-----|
| <b>3</b> | <b>Methods of Linear Control Theory</b>                           | 49  |
| 3.1      | Linear Systems  | 50  |
| 3.2      | Full-State Feedback   | 51  |
| 3.3      | Sensor-Based State Estimation                                     | 53  |
| 3.4      | Sensor-Based Feedback   | 56  |
| 3.5      | System Identification and Model Reduction                         | 58  |
| 3.5.1    | System Identification   | 59  |
| 3.5.2    | Eigensystem Realization Algorithm (ERA)                           | 59  |
| 3.5.3    | Observer Kalman Filter Identification (OKID)                      | 62  |
| 3.6      | Exercises   | 65  |
| 3.7      | Suggested Reading   | 67  |
| <b>4</b> | <b>Benchmarking MLC Against Linear Control</b>                    | 69  |
| 4.1      | Comparison of MLC with LQR on a Linear Oscillator                 | 70  |
| 4.2      | Comparison of MLC with Kalman Filter on a Noisy Linear Oscillator | 73  |
| 4.3      | Comparison of MLC with LQG for Sensor-Based Feedback              | 80  |
| 4.4      | Modifications for Small Nonlinearity                              | 84  |
| 4.5      | Exercises   | 86  |
| 4.6      | Interview with Professor Shervin Bagheri                          | 89  |
| <b>5</b> | <b>Taming Nonlinear Dynamics with MLC</b>                         | 93  |
| 5.1      | Generalized Mean-Field System                                     | 94  |
| 5.2      | Machine Learning Control  | 98  |
| 5.2.1    | Formulation of the Control Problem                                | 98  |
| 5.2.2    | MLC Parameters  | 99  |
| 5.2.3    | MLC Results   | 99  |
| 5.3      | Derivation Outline for the Generalized Mean-Field Model           | 105 |
| 5.4      | Alternative Control Approaches                                    | 109 |
| 5.4.1    | Open-Loop Forcing   | 109 |
| 5.4.2    | Closed-Loop Forcing   | 111 |
| 5.4.3    | Short-Term Forcing  | 113 |
| 5.5      | Exercises   | 115 |
| 5.6      | Suggested Reading   | 116 |
| 5.7      | Interview with Professor Mark N. Glauser                          | 117 |
| <b>6</b> | <b>Taming Real World Flow Control Experiments with MLC</b>        | 121 |
| 6.1      | Separation Control Over a Backward-Facing Step                    | 122 |
| 6.1.1    | Flow Over a Backward-Facing Step                                  | 122 |
| 6.1.2    | Experimental Setup at PMMH  | 123 |
| 6.1.3    | Results   | 127 |
| 6.2      | Separation Control of Turbulent Boundary Layers                   | 128 |
| 6.2.1    | Separating Boundary Layers  | 128 |
| 6.2.2    | Experimental Setups at LML and PRISME                             | 129 |
| 6.2.3    | Results   | 132 |

|          |   |            |
