

Contents

- 1 Multilayer Control System Framework for Cyber-Physical Systems** 1
 - 1.1 Cyber-Physical Systems and Multilayer Control System Concept 1
 - 1.2 Multilayer Control System Algorithms and Performance 4
 - 1.2.1 Network Layer Consensus-Based Algorithms 5
 - 1.2.2 Network Layer Performance Metrics 6
 - 1.2.3 Application Layer Consensus-Based Algorithms 7
 - 1.2.4 Application Layer Performance Metrics 9
 - 1.3 Consensus-Based Algorithm Taxonomy 10
 - References 11

- 2 Network Layer Control System: Consensus-Based Control, Theoretical Results and Performance Issues** 13
 - 2.1 Introduction 13
 - 2.2 Network Model and Overlay Virtual Graph 15
 - 2.3 Consensus-Based Cooperative Rate Control Scheme: Stability and Convergence Results 18
 - 2.4 Performance Issues 24
 - 2.4.1 Set Point Regulation, Queue Balancing, and Link Utilization 24
 - 2.4.2 Fairness 24
 - 2.5 Implementation Issues 25
 - References 26

- 3 Application Layer Control System: Consensus-Based Control, Theoretical Results and Performance Issues** 29
 - 3.1 Introduction 29
 - 3.2 Networked Monitoring and Control System Model 31
 - 3.3 Consensus-Based Cooperative Control: Stability and Convergence Results 34
 - 3.4 Performance Issues 39

3.5	Implementation Issues	40
3.5.1	Effect of Collision Phenomena on the Network Latency	42
3.5.2	Algorithm Time Complexity	44
3.6	Multilayer Control System Design	45
	References	47
4	Application to Control of Networked Queue Systems	49
4.1	Rate Control and Queue Balancing in Wired Networks: End-to-End Implementation	49
4.1.1	Queue Length Stabilization and Balancing	51
4.1.2	Link Utilization and Fairness	51
4.1.3	Scalability	54
4.2	Rate Control and Queue Balancing in Wireless Networks: Hop-by-Hop Implementation	55
4.2.1	Analysis of Network Parameters Effect on WNMCS Performance	59
4.2.2	Feedforward Action Term Design Validation	61
4.2.3	Feedback Cooperative Term Design Validation	62
4.3	Load Balancing in Content Delivery Networks: Hop-by-Hop Implementation	66
4.3.1	A Load-Balanced CDN: Model Formulation	70
4.3.2	A Consensus-Based Load Balancing Algorithm	74
4.3.3	Simulation Experiments Validation	79
4.3.4	Effects of Queue Threshold on Algorithm Performance	89
4.3.5	Settling Time Analysis	93
	References	94
5	Application to Cyber-Physical Systems	99
5.1	Wireless Body Area Networked System	99
5.1.1	Introduction	99
5.1.2	Healthcare System Simulation and Evaluation Environment	102
5.1.3	Performance Metrics	106
5.1.4	Evaluation of Congestion Effect on Healthcare Delivery System Performance	108
5.1.5	Weighted and Adaptive Fairness Criteria for Congestion Control in Healthcare Systems	110
5.2	Wireless Networked Monitoring Systems	117
5.2.1	Gain Algorithm and Routing Protocol Parameter Codesign: Simulation Experiments Validation	117
5.2.2	Analysis of Trade Off Among Algorithm Responsiveness, Delay Tolerance and Number of Hop	119

5.2.3	Consensus Algorithm Gain K and Routing Protocol f_H Codesign	121
5.3	Wireless Networked Robot Systems	126
5.3.1	Algorithm Implementation	127
5.3.2	Effect of Packet Collision Phenomena in the Presence of Background Traffic: Design of f_H Parameter	128
5.3.3	Simulation Experiments Validation and Codesign	129
5.3.4	Settling Time t_s Under Varying Number of Hop m : Codesign of m Parameter	130
5.3.5	Effect of Collision Phenomena on the Settling Time t_s : Codesign of f_H Parameter	131
