## Part I Modern Aspects of Fracture Mechanics in the Industrial Application of Polymers

<b>1</b>	<b>Time-Dependent Fracture Behaviour of Polymers at Impact and Quasi-Static Loading Conditions</b> . . . . .	<b>3</b>
	R. Lach and W. Grellmann	
1.1	Comparison of Methods for the Determination of R-Curves for Polymers at Impact Loading . . . . .	4
1.2	Material Samples . . . . .	5
1.2.1	Semicrystalline Polymers with Particle–Matrix Structure: PP/EPR/PE Copolymers . . . . .	5
1.2.2	Short-Glass Fibre (GF)-Reinforced Semicrystalline Polymers: PP/GF . . . . .	6
1.2.3	Nanophase-Separated Amorphous Polymers: Binary Blends of PS–PB Block Copolymers . . . . .	7
1.2.4	CTOD Rate Under Quasi-Static Test Conditions: PP/EPR Blends . . . . .	10
1.2.5	Influence of the Temperature: Amorphous Polycarbonate (PC) . . . . .	11
1.3	Crack Propagation Kinetics of Polymers at Impact Loading Conditions . . . . .	12
1.4	Discussion of Literature on Crack Propagation Kinetics . . . . .	15
1.5	Stable Crack Propagation as Kinetic Phenomenon—An Outlook. . . . .	19
	References. . . . .	20
<b>2</b>	<b>Fatigue Crack Growth Behaviour of Epoxy Nanocomposites—Influence of Particle Geometry</b> . . . . .	<b>23</b>
	M.H. Kothmann, G. Bakis, R. Zeiler, M. Ziadeh, J. Breu and V. Altstädt	

2.1	Introduction . . . . .	23
2.2	Experimental . . . . .	25
2.2.1	Materials . . . . .	25
2.2.2	Preparation of Nanocomposites . . . . .	26
2.2.3	Characterisation Methods. . . . .	26
2.3	Results and Discussion . . . . .	27
2.3.1	Organophilisation of Nanoparticles . . . . .	27
2.3.2	Morphology. . . . .	27
2.3.3	Fatigue Crack Propagation Behaviour . . . . .	28
2.4	Conclusion . . . . .	30
	References. . . . .	31
<b>3</b>	<b>Fracture Mechanics Methods to Assess the Lifetime of Thermoplastic Pipes . . . . .</b>	<b>33</b>
	F. Arbeiter, G. Pinter, R.W. Lang and A. Frank	
3.1	Failure Behaviour of Polymer Pipes . . . . .	34
3.2	Fracture Mechanics Approach for Pipe Lifetime Calculations . . . . .	36
3.3	Crack Growth in Polyethylene . . . . .	39
3.4	Extrapolation to Static Crack Growth Behaviour from Fatigue Tests . . . . .	41
3.5	Lifetime Calculation of PE Pipe Grades . . . . .	44
3.6	Lifetime Calculation of a PE Pipe Grade at 80 °C Using Cyclic CRB Tests. . . . .	45
3.7	Conclusion and Outlook . . . . .	48
	References. . . . .	49
<b>4</b>	<b>Thermographic Characterisation of the Deformation and Fracture Behaviour of Polymers with High Time and Spatial Resolution . . . . .</b>	<b>55</b>
	M. Stein and K. Schneider	
4.1	Introduction . . . . .	55
4.2	Experimental . . . . .	56
4.2.1	Materials . . . . .	56
4.2.2	Methods. . . . .	57
4.3	Results . . . . .	59
4.3.1	Thermomechanical Characterisation of PET . . . . .	59
4.3.2	Thermomechanical Characterisation of PC. . . . .	65
4.4	Discussion. . . . .	67
4.4.1	Polycarbonate—Affine Deformation with Uniform Energy Dissipation. . . . .	68
4.4.2	Poly(Ethylene Terephthalate)—Localised Deformation and Complex Influence of Two Phases . . . . .	68

4.5	Conclusion . . . . .	71
	References. . . . .	71
<b>5</b>	<b>Mechanical and Fracture Mechanical Properties of Polymorphous Polypropylene . . . . .</b>	<b>73</b>
	A. Monami, B. Langer, J. Sadilek, J. Kučera and W. Grellmann	
5.1	Introduction . . . . .	73
5.2	Experimental Part . . . . .	75
5.3	Results and Discussion . . . . .	77
	5.3.1 Degree of Crystallinity. . . . .	77
	5.3.2 Influence of Cooling Rate on the Resistance Against Stable Crack Initiation and Crack Growth . . . . .	78
5.4	Conclusion . . . . .	80
	References. . . . .	80
<b>6</b>	<b>Numerical Modelling of Damage Initiation and Failure of Long Fibre-Reinforced Thermoplastics . . . . .</b>	<b>83</b>
	L. Schulenberg, D.-Z. Sun and T. Seelig	
6.1	Introduction . . . . .	83
6.2	Problem Formulation . . . . .	84
	6.2.1 Experimental Observation . . . . .	84
	6.2.2 Microscopic Observation . . . . .	84
	6.2.3 Numerical Microstructural Model . . . . .	86
6.3	Numerical Results. . . . .	87
	6.3.1 Single-Fibre Unit Cell Under Uniaxial Tension . . . . .	87
	6.3.2 Unit Cells Containing Three Fibres . . . . .	88
	6.3.3 Variations of the Fibre Overlapping Length and Load Direction. . . . .	90
6.4	Discussion. . . . .	91
6.5	Summary . . . . .	91
	References. . . . .	92
 <b>Part II Advanced Structure-Sensitive Methods for Analysing Cracks and Fracture Surfaces</b>		
<b>7</b>	<b>Characterisation of Polymers in the Scanning Electron Microscope—From Low-Voltage Surface Imaging to the 3D Reconstruction of Specimens . . . . .</b>	<b>95</b>
	A. Zankel, M. Nachtnebel, C. Mayrhofer, K. Wewerka and T. Müllner	
7.1	Introduction . . . . .	95
7.2	Low-Voltage Mode of the SEM . . . . .	96
7.3	Low-Vacuum Mode of the ESEM . . . . .	97
7.4	The ESEM Mode . . . . .	100

7.5	Artefacts and Beam Damage. . . . .	101
7.6	3D Information Using In Situ Ultramicrotomy . . . . .	103
7.7	Conclusions . . . . .	106
	References. . . . .	107
<b>8</b>	<b>3D Reconstruction of Cracks in Polymers—New Insight into the Fracture Behaviour? . . . . .</b>	<b>109</b>
	M. Nachtnebel, A. Zankel, C. Mayrhofer, M. Gahleitner and P. Pölt	
8.1	Introduction . . . . .	109
8.2	Preparation and Image Processing. . . . .	111
8.3	Results and Discussion . . . . .	112
8.4	Conclusion . . . . .	117
	References. . . . .	118
<b>9</b>	<b>Determination of the Stable Crack Growth by Means of the Fluorescence Adsorption-Contrast Method (3D-FAC Method) . . . .</b>	<b>121</b>
	M. Kroll, B. Langer and W. Grellmann	
9.1	Introduction . . . . .	122
9.2	Experimental. . . . .	123
	9.2.1 Materials . . . . .	123
	9.2.2 <i>J</i> -R-Curve Determination. . . . .	124
9.3	Development of a Fluorescence Microscopy Procedure for $\Delta a$ Measurement. . . . .	125
	9.3.1 Fluorescent Penetration Dye Colouring . . . . .	125
	9.3.2 Optimisation of the Fluorescent Application Process . . . . .	126
	9.3.3 Fluorescence Adsorption-Contrast Method (3D-FAC Method) . . . . .	129
9.4	Results and Discussion . . . . .	133
9.5	Conclusions . . . . .	135
	References. . . . .	136
<b>10</b>	<b>Acoustic Emission Analysis for Assessment of Damage Kinetics of Short-Glass Fibre-Reinforced Thermoplastics—ESEM Investigations and Instrumented Charpy Impact Test . . . . .</b>	<b>139</b>
	M. Schoßig, A. Zankel, C. Bierögel, P. Pölt and W. Grellmann	
10.1	Introduction . . . . .	140
10.2	Theoretical Background . . . . .	141
	10.2.1 Acoustic Emission (AE) Analysis . . . . .	141
	10.2.2 Frequency Analysis—Wavelet Transform (WT) . . . .	144
10.3	Experimental Details. . . . .	145
	10.3.1 In Situ Tensile Tests in ESEM Coupled with AE Measurement . . . . .	145
	10.3.2 Coupling ICIT and AE Analysis . . . . .	147

10.4	Results	149
10.4.1	ESEM Investigations—Coupling the In Situ Tensile Test with AE Analysis	149
10.4.2	AE Measurements During ICIT	157
10.5	Summary	161
	References	162
<b>11</b>	<b>The Fractography as a Tool in Failure Analysis—Possibilities and Limits</b>	<b>165</b>
	I. Kotter and W. Grellmann

34.1	Introduction . . . . .	485
34.2	Materials and Methods . . . . .	486
34.2.1	Materials . . . . .	486
34.2.2	Sample Preparation . . . . .	486
34.2.3	Testing Methods . . . . .	487

34.3	Results and Discussion . . . . .	487
34.3.1	Effect of Wood Flour Derived from Coniferous Trees (CF) on Properties of NR and ENR . . . . .	487
34.3.2	Effect of Wood Flour Derived from Deciduous Coniferous Trees (DF) on Properties of NR and ENR . . . . .	489
34.4	Conclusion . . . . .	491
	References. . . . .	491

Deformation and Fracture Behaviour of Polymer  
Materials

Grellmann, W.; Langer, B. (Eds.)

2017, XXXII, 533 p. 328 illus., 219 illus. in color.,  
Hardcover

ISBN: 978-3-319-41877-3
