

Contents

1	Preview of Predictor Feedback and Delay Compensation	1
1	Introduction	1
2	Predictor Feedback	2
3	Three Different Viewpoints	7
3.1	IDEs	7
3.2	The Hybrid Viewpoint	8
3.3	The Dynamic Viewpoint	8
4	Important Questions	9
5	Background Material	11
5.1	Deterministic Control Systems	12
5.2	Equilibrium Points	13
5.3	Input-to-Output Stability	14
5.4	Asymptotic Gain	15
6	Bibliographical and Historical Notes	15
 Part I Linear Systems Under Predictor Feedback		
2	Linear Systems with State Measurement	19
1	Introduction	19
2	Basic Case: Undelayed Continuous State Measurement and Continuous Control	20
3	Disturbance Attenuation Limitations Due to Delays	31
4	Approximate Predictors	35
5	Delay-Robustness of Predictor Feedback	46
3	Linear Systems with Output Measurement	59
1	Introduction	59
2	Continuous Output Measurement and Dead-Beat Observers	60
3	Hardest Case: Delayed Sampled Output Measurement and Control Applied with ZOH	69

Part II Nonlinear Systems Under Predictor Feedback

4	Nonlinear Systems with State Measurement	85
1	Introduction	85
2	Basic Case: Continuous Control	86
2.1	General Discussion	86
2.2	Hybrid and Dynamic Implementation	88
3	Input Applied with Zero Order Hold	95
3.1	Nonlinear Case	96
3.2	LTI Systems and DECI Systems	101
4	Approximate Predictors	107
4.1	Globally Lipschitz Systems	108
4.2	Numerical Approximations for the General Case	111
5	Stabilization with Approximate Predictors	118
5.1	Systems Satisfying a Linear Growth Condition	119
5.2	Approximate Predictors with Hybrid Implementation	125
6	Examples	140
6.1	A Globally Lipschitz Example	140
6.2	A Nonlinear System in Strict Feedback Form	145
6.3	Stabilization of a Mobile Robot Over a Long-Distance Communication Network with Arbitrarily Sparse Sampling	150
5	Nonlinear Systems with Output Measurement	155
1	Introduction	155
2	Solution Map Explicitly Known	156
3	Globally Lipschitz Systems	166
4	Systems with a Compact Absorbing Set	181
4.1	Main Result	182
4.2	Auxiliary Results	187
4.3	Proof of Main Result	202
4.4	An Illustrating Example	208
6	Application to the Chemostat	213
1	Introduction	213
2	Anaerobic Digestion	215
2.1	Mathematical Model of Anaerobic Digestion	215
2.2	Steady States of Anaerobic Digestion	216
2.3	Local Asymptotic Stability	216
2.4	Optimal Steady State for Maximal Methane Production	217
2.5	The Need for Control	218
3	The Control System	219
3.1	Forward Completeness	220
3.2	Controllability Analysis	222
3.3	Synthesis of a Globally Stabilizing Control Law	223
4	The Chemostat with Sampled and Delayed Measurements	225

Part III Extensions of Predictor Feedback

7 Systems Described by Integral Delay Equations	229
1 Introduction	229
2 System-Theoretic Properties	230
3 Stability	244
8 Discrete-Time Systems	251
1 Introduction	251
2 A Backstepping Solution	253
3 Lyapunov Redesign	261
4 Robustness to Perturbations of the Delay	270
Notes and Comments for Part I	279
Notes and Comments for Part II	283
Notes and Comments for Part III	285
References	287
Index	295

Predictor Feedback for Delay Systems: Implementations
and Approximations

Karafyllis, I.; Krstic, M.

2017, XVII, 297 p. 12 illus., 11 illus. in color., Hardcover

ISBN: 978-3-319-42377-7

A product of Birkhäuser Basel
