
Contents

1	Accurate Estimation with One Order Statistic	1
1.1	Introduction	2
1.2	The Case of the Exponential Distribution	3
1.3	An Example for the Exponential Distribution	7
1.4	The Rayleigh and Weibull Distribution Extensions	9
1.5	Simulations and Computational Issues	11
1.6	Implications for Design of Life Tests	12
1.7	Conclusions	13
2	On the Inverse Gamma as a Survival Distribution	15
2.1	Introduction	16
2.2	Probabilistic Properties	17
2.3	Statistical Inference	22
2.3.1	Complete Data Sets	22
2.3.2	Censored Data Sets	25
2.4	Conclusions	28
3	Order Statistics in Goodness-of-Fit Testing	31
3.1	Introduction	32
3.2	\mathcal{P} -Vector	33
3.3	Computation of the \mathcal{P} -Vector	35
3.4	Goodness-of-Fit Testing	35
3.5	Power Estimates for Test Statistics	37
3.6	Further Research	38
4	The “Straightforward” Nature of Arrival Rate Estimation?	41
4.1	Introduction	42
4.1.1	Sampling Plan 1: Time Sampling	43

4.1.2	Sampling Plan 2: Count Sampling	44
4.1.3	Sampling Plan 3: Limit Both Time and Arrivals	47
4.2	Conclusions	49
5	Survival Distributions Based on the Incomplete Gamma Function Ratio	51
5.1	Introduction	51
5.2	Properties and Results	53
5.3	Examples	56
5.4	Conclusions	58
6	An Inference Methodology for Life Tests with Full Samples or Type II Right Censoring	59
6.1	Introduction and Literature Review	60
6.2	The Methodology for Censored Data	62
6.3	The Uniformity Test Statistic	63
6.4	Implementation Using APPL	64
6.5	Power Simulation Results	66
6.6	Some Applications and Implications	67
6.7	Conclusions and Further Research	68
7	Maximum Likelihood Estimation Using Probability Density Functions of Order Statistics	75
7.1	Introduction	75
7.2	MLEOS with Complete Samples	77
7.3	Applying MLEOS to Censored Samples	79
7.4	Conclusions and Further Research	85
8	Notes on Rank Statistics	87
8.1	Introduction	88
8.2	Explanation of the Tests	89
8.3	Distribution of the Test Statistic Under H_0	90
8.4	Wilcoxon Power Curves for $n = 2$	91
8.5	Generalization to Larger Sample Sizes	94
8.6	Comparisons and Analysis	96
8.7	The Wilcoxon–Mann–Whitney Test	98
8.8	Explanation of the Test	99
8.9	Three Cases of the Distribution of W Under H_0	100
8.9.1	Case I: No Ties	100
8.9.2	Case II: Ties Only Within Each Sample	102
8.9.3	Case III: Ties Between Both Samples	104
8.10	Conclusions	106

9	Control Chart Constants for Non-normal Sampling	107
9.1	Introduction	107
9.2	Constants d_2 , d_3	108
9.3	Constants c_4 , c_5	112
9.3.1	Normal Sampling	112
9.3.2	Non-normal Sampling	114
9.4	Conclusions	116
10	Linear Approximations of Probability Density Functions	119
10.1	Approximating a PDF	119
10.2	Methods for Endpoint Placement	121
10.2.1	Equal Spacing	121
10.2.2	Placement by Percentiles	121
10.2.3	Curvature-Based Approach	122
10.2.4	Optimization-Based Approach	123
10.3	Comparison of the Methods	125
10.4	Application	125
10.4.1	Convolution Theorem	126
10.4.2	Monte Carlo Approximation	126
10.4.3	Convolution of Approximate PDFs	128
10.5	Conclusions	129
11	Univariate Probability Distributions	133
11.1	Introduction	134
11.2	Discussion of Properties	138
11.3	Discussion of Relationships	140
11.3.1	Special Cases	140
11.3.2	Transformations	140
11.3.3	Limiting Distributions	141
11.3.4	Bayesian Models	141
11.4	The Binomial Distribution	142
11.5	The Exponential Distribution	144
11.6	Conclusions	146
12	Moment-Ratio Diagrams for Univariate Distributions	149
12.1	Introduction	150
12.1.1	Contribution	152
12.1.2	Organization	152
12.2	Reading the Moment-Ratio Diagrams	153
12.3	The Skewness-Kurtosis Diagram	155
12.4	The CV-Skewness Diagram	156
12.5	Application	157
12.6	Conclusions and Further Research	160

13 The Distribution of the Kolmogorov–Smirnov, Cramer–von Mises, and Anderson–Darling Test Statistics for Exponential Populations with Estimated Parameters	165
13.1 The Kolmogorov–Smirnov Test Statistic	166
13.1.1 Distribution of D_1 for Exponential Sampling	167
13.1.2 Distribution of D_2 for Exponential Sampling	168
13.2 Other Measures of Fit	176
13.2.1 Distribution of W_1^2 and A_1^2 for Exponential Sampling	177
13.2.2 Distribution of W_2^2 and A_2^2 for Exponential Sampling	178
13.3 Applications	181
14 Parametric Model Discrimination for Heavily Censored Survival Data	191
14.1 Introduction	192
14.2 Literature Review	193
14.3 A Parametric Example	196
14.4 Methodology	197
14.4.1 Uniform Kernel Function	198
14.4.2 Triangular Kernel Function	203
14.5 Monte Carlo Simulation Analysis	208
14.6 Conclusions and Further Work	210
15 Lower Confidence Bounds for System Reliability from Binary Failure Data Using Bootstrapping	217
15.1 Introduction	217
15.2 Single-Component Systems	218
15.3 Multiple-Component Systems	219
15.4 Perfect Component Test Results	224
15.5 Simulation	230
15.6 Conclusions	235
References	239
