Contents

1 Renewable Energy Sources—Overview 1
1.1 Development of RES in Europe 2
1.2 Utilization of Different Sources of Electrical Energy in the Various Countries of the European Union 8
1.3 The Proportion of Energy Obtained with the Use of RES in the Consumption of Various Sectors 13
1.4 Wind Power Plants 19
1.5 Photovoltaic Power Plants 25
1.6 Conditions for Connecting RESs (Wind, Solar) 31
1.6.1 Voltage Increase 34
1.6.2 Voltage Changes Due to Switching 36
1.6.3 Connection of Plants with Inverters or Frequency Convertors 37
1.6.4 Special Requirements for the Plants with RESs 39
References 41

2 Systems and Equipment of Wind Power Plants 43
2.1 Micro and Small Wind Power Plants 44
2.1.1 Start of the Excited Generator 49
2.1.2 Connecting of the Induction Generator to the Distribution External Grid 50
2.1.3 Connecting the Non-excited Generator to the External Grid 51
2.1.4 Instantaneous Disconnection of the Generator from the External Grid 52
2.1.5 Connecting Capacitors to the Running Generator 53
2.1.6 Load Changes 54
2.1.7 The Effect of Terminal Voltage Changes During Cooperation with the External Grid 54
2.1.8 Induction Generator of the Wind Power Plant in the Autonomous Mode 56

2.2 Medium Wind Power Plants . . . 59
2.2.1 Generators of Medium Wind Power Plants . . . 64
2.3 Large Wind Power Plants . . . 82
2.3.1 Control Systems for High-Capacity Wind Power Plants . . . 84
2.3.2 WPP Control System Cooperating with Frequency Converters . . . 84
2.3.3 Switching the Wind Power Plant in the External Grid . . . 86
2.3.4 Comparison of Different Systems of Wind Power Plants . . . 88
2.4 Reactive Power Regulation . . . 94
2.4.1 Selected Reverse Effects on the External Grid . . . 95
2.4.2 Influence of the WPP Operation on the Substation Supply Systems . . . 102
References . . . 105

3 Operating Characteristics of Photovoltaic Power Plants . . . 107
3.1 Development of PPP Components . . . 107
3.1.1 The First Generation . . . 107
3.1.2 The Second Generation . . . 108
3.1.3 The Third Generation . . . 108
3.2 Basic Operating Characteristics of PPPs . . . 109
3.2.1 PPP Power Curve . . . 109
3.2.2 Production, Utilization Ratio, Efficiency, and Power Flows . . . 112
3.3 PPP Operating States . . . 115
3.3.1 PQ Diagram . . . 115
3.4 Power Flow Variability and Its Impact on the System . . . 119
3.5 PPP Negative Effect on the Distribution System . . . 123
3.6 Prediction Methods for PPP Power Output Prediction . . . 125
3.6.1 The General Principle for Predicting the Production of Electricity from PPPs . . . 125
3.6.2 The Source of Solar Radiation . . . 125
3.6.3 A Decrease in Radiation Energy Due to Passage Through the Atmosphere . . . 125
3.6.4 Losses Due to Conversion in the Photovoltaic Cell . . . 128
3.6.5 Methods for Predicting the Production of Electricity from PPPs . . . 129
3.6.6 Solar Databases . . . 129
3.6.7 The European Solar Radiation Atlas (ESRA) . . . 130
3.6.8 HelioClim . . . 131
3.6.9 Satel-Light . . . 131
3.6.10 Nasa SSE . . . 131
3.6.11 SWERA . . . 132
3.6.12 SOLEMI . . . 132

3.6.13 METEONORM . . . 133
3.6.14 SolarGis . . . 133
3.7 Influence of Factors on Changes in the Predicted Power Output . . . 133
3.7.1 Estimation of the Average Values of Solar Radiation . . . 135
3.7.2 Databases of Measured Values . . . 135
3.7.3 Mathematical Models . . . 135
3.7.4 Interpolation of Values . . . 136
3.7.5 Satellite Images . . . 136
3.7.6 The Methods of Existing Systems . . . 136
3.7.7 Variability of Solar Energy Sources . . . 137
3.7.8 Inaccuracies Due to the Use of Transposition Model . . . 137
3.7.9 Inaccuracies Due to the Operation of Photovoltaic Power Plants . . . 138
3.8 Assessing the Possibility to Increase the Available Power Output of PPPs . . . 141
3.8.1 Tilting Systems . . . 143
3.8.2 Photovoltaic System Without Traction . . . 144
3.8.3 Photovoltaic System with Autotraction . . . 145
3.8.4 Comparison of Both Systems . . . 145
3.8.5 Maximum Power Point Tracking (MPPT) . . . 146
3.8.6 MPPT Techniques . . . 147
3.8.7 Concentrators . . . 149
3.8.8 Efficiency of Panels, the Use of Radiation Spectrum . . . 150
References . . . 150

4 Hybrid Off-Grid Systems Using Renewable Energy Sources . . . 153
4.1 General Description . . . 153
4.2 Specification of Sources for Off-Grid Systems . . . 154
4.3 Micro Off-Grid System . . . 157
4.3.1 Simplified Economic Analysis of Micro Off-Grid System . . . 161
4.4 Small Off-Grid System . . . 164
4.4.1 Analysis of Consumption . . . 164
4.4.2 Design of the Storage System . . . 168
4.4.3 Design of the Source Part . . . 173
4.4.4 Design of the Control System . . . 175
4.4.5 Electric Power Quality . . . 183
4.4.6 Active System of Power Consumption Management in the Off-Grid System . . . 188
4.5 Analysis of Fault Conditions in the Off-Grid System . . . 191
4.5.1 Overload in the Testing Platform of the Off-Grid System . . . 193
4.5.2 Short-Circuit Faults in the Off-Grid System . . . 199

4.5.3 Single-Phase Short-Circuit Faults in the Off-Grid System—The First Operating State 202
4.5.4 Single-Phase Short Circuit of the Off-Grid System: The Second Operating Status 206
4.5.5 Single-Phase Short Circuit in the Off-Grid System: The Third Operation Condition 209
4.5.6 Possibilities of Protection with the Use of the Existing Technology 217
4.5.7 Adaptive System of Protection for the Off-Grid System. 219
4.5.8 Using SMC 144 for the Adaptive Protection System 223
4.5.9 Verification of the Adaptive System of the Off-Grid System Protection 229
