

Contents

1	Physical Foundations of Conformal Symmetry	1
1.1	Fixed Points	1
1.2	Existing Techniques	6
1.3	Towards a Nonperturbative Definition	9
1.3.1	Operator Spectrum	9
1.3.2	Stress Tensor and Currents	10
1.3.3	Conformal Invariance	13
1.3.4	Transformation Rule for Operators	16
1.4	Literature	17
	References.	17
2	Conformal Kinematics	19
2.1	Projective Null Cone	19
2.2	Simple Applications	24
2.2.1	Primary Scalar 2pt Function	24
2.2.2	Primary Scalar 3pt Function	26
2.2.3	Four Point Function	27
2.3	Fields with Spin	28
2.3.1	Extending the Null Cone Formalism.	28
2.3.2	Two Point Function	30
2.3.3	Remark About Inversion.	32
2.3.4	Remark on Conservation.	32
2.3.5	Scalar-scalar-(spin l)	33
2.4	Appendix: An Elementary Property of CTs	34
2.5	Literature	35
	References.	35
3	Radial Quantization and OPE	37
3.1	Radial Quantization	37
3.1.1	General Remarks on Quantization.	37
3.1.2	Algebra Action on Quantum Operators.	39

3.1.3	Examples of States in Radial Quantization.	
	State-Operator Correspondence	41
3.1.4	Cylinder Interpretation	42
3.1.5	N-S Quantization.	44
3.1.6	Conjugation in Radial Quantization	45
3.1.7	2pt Function in Radial Quantization	46
3.2	Unitarity Bounds	48
3.3	Operator Product Expansion (OPE)	50
3.4	Literature	53
	References.	53
4	Conformal Bootstrap.	55
4.1	Recap	55
4.2	Consistency Condition on CFT Data	57
4.3	Conformal Bootstrap.	59
	4.3.1 Success Story in $D = 2$	60
	4.3.2 Tools for the Bootstrap in $D \geq 3$ Dimensions.	61
	4.3.3 An Application	66
4.4	Literature	69
	References.	71

EPFL Lectures on Conformal Field Theory in $D \geq 3$
Dimensions

Rychkov, S.

2017, XII, 72 p. 14 illus., 12 illus. in color., Softcover

ISBN: 978-3-319-43625-8
