Contents

1 The Theoretical Basis of the Low-Temperature Plasma 1
1.1 The Basic Approaches to the Description of Plasma. 1
1.1.1 The Plasma Relations for the Full Thermodynamic Equilibrium 4
1.1.2 The Model of Local Thermodynamic Equilibrium in Plasma. 7
1.1.3 The Model of Partial Local Thermodynamic Equilibrium in Plasma 8
1.2 Model of Equilibrium Plasma 11
1.2.1 The Energy Balance Equation 12
1.2.2 The Momentum Equations of the Plasma Flow 13
1.2.3 The Continuity Equation of the Plasma Flow 14
1.2.4 The Maxwell's Equations 14
1.2.5 The Equations of Equilibrium Plasma Model in a Cylindrical Coordinate System 15
1.3 The Two-Temperature Model of Nonequilibrium Plasma 18
1.3.1 The Violation of Ionization Equilibrium in Plasma. Equation of Ionization Equilibrium 23
1.4 The Two-Speed Plasma Model 25
1.5 Gas Dynamic Models of Plasma Turbulence 26
1.5.1 The Reynolds-Averaged Navier–Stokes Equations 27
1.5.2 The Main Gas Dynamic Model of Turbulence 31
1.6 Models of Light Emission and Absorption in Plasma. 36
1.6.1 Radiation in the Continuous Spectrum 37
1.6.2 Absorption in the Continuum 42
1.6.3 Radiation in the Spectral Lines 45
1.6.4 The Absorption in Spectral Lines 49
References. 50

2 Classical Theory of the Particle Scattering 53
2.1 Classical Consideration of the Particle Scattering 53
2.2 Determination of Cross Sections for Plasma Particles Interaction 59
2.2.1 Coulomb Scattering: The Cross Section of the Interaction of Charged Particles 59
2.2.2 Ramseur Effect and the Resonance Scattering of the Electrons by Atoms 64
2.2.3 The Cross Sections for the Interaction of Molecule–Molecule, Atom–Atom 65
2.2.4 The Cross Sections for the Interaction of the Atom–Ion 66
References 70

3 Quantum Mechanical Theory of the Particle Scattering 71
3.1 The Schrödinger Equation 71
3.2 Solution of the Schrödinger Equation for the Elastic Interactions 74
3.3 Determination of the Phase Shift 78
3.4 Born Approximation for Calculating the Amplitudes of the Scattered Waves 81
3.5 Determination of Differential and Total Cross Sections of Elastic Interactions 85
References 92

4 Determination of the Composition, Thermodynamic Properties, and Transport Coefficients on the Basis of the Mean Free Path 93
4.1 The Plasma Composition 93
4.2 Thermodynamic Properties of the Plasma 98
4.3 Transport Coefficients of the Plasma 102
4.3.1 Determination of the Electrical Conductivity and Thermal Conductivity 103
4.3.2 Determination of the Viscosity, the Ambipolar Diffusion Coefficient, and Integrated Emission 108
4.4 The Coefficients of Triple Recombination and Impact Ionization 114
4.5 The Frequency of Particle Collisions, the Current Density, and Heating Capacity of Plasma 117
References 120

5 The Boltzmann Kinetic Equation and Calculation of the Transport Coefficients 123
5.1 Introduction of the Boltzmann Kinetic Equation 123
5.2 The Transport Equations 126

5.2.1 Principle of the Equilibrium Systems 130
5.3 Solution of the Boltzmann Kinetic Equation by Chapman–Enskog Approach 132
5.4 Determination of Viscosity 139
5.4.1 Determination of the Elements in the Bracket Integral {B, B} by Sonine Polynomials 141
5.4.2 The Bracket Integrals 143
5.5 Determination the Coefficients of Diffusion, Thermal Diffusion, and Thermal Conductivity 146
5.5.1 Calculation of Diffusion and Thermal Diffusion Coefficients 146
5.5.2 Determination of the Heat Flow 147
5.5.3 Defining Elements of the Bracket Integrals $\{\tilde{\mathbf{A}}, \tilde{\mathbf{A}}\}$ and $\{\mathbf{A}, \mathbf{D}\}$ Using the Sonine Polynomials 148
5.5.4 The Bracket Integrals 151
5.6 Determination of the Electrical Conductivity 156
References 157

6 Numerical Methods of the Plasma Physics 159
6.1 Basis of the Numerical Methods of the Plasma Physics 159
6.1.1 Solution of the Generalized Differential Equation 159
6.1.2 Solution of the Momentum Equations and the Continuity Equation of the Gas Flux 171
6.1.3 Conversion of Different Equations in Generalized Form 180
6.2 The Stability of the Difference Methods and Computational Procedures 184
6.2.1 Stability of Difference Methods 184
6.2.2 Analysis of the Computational Procedures Stability . . . 187
6.3 The Structural Organization of Computational Procedures 191
6.3.1 The External Feedback in the Structure of Computational Procedures 191
6.3.2 Installing Internal Feedback in the Computational Procedures 192
6.3.3 The Mathematical Algorithms with Internal Feedback 197
6.3.4 The Stability Region of the Computational Procedures of Plasma Processes 200
References 202

7 The RF Plasma Torches 205
7.1 Characteristics of the RF Plasma Torches 205
7.2 Electromagnetic Field in the RF Plasma Torches 214
7.2.1 Equation of the Vector Potential and Its Solution 219

7.2.2 Boundary Conditions of the Equation of the Vector Potential. 222
7.2.3 Calculation of the Electromagnetic Field and Electric Characteristics of the RF Plasma Torches 227
7.3 Simulation of the Equilibrium Plasma in the RF Plasma Torches. 240
7.3.1 Algorithms of the Mathematical Model. 241
7.3.2 Analysis of the Simulation Results 249
7.4 Disturbance of the Thermal and Ionization Equilibrium in Plasma, Caused by the Gases Movement 258
7.5 Simulation of the Nonequilibrium Plasma in the RF Plasma Torches. 266
7.5.1 Discrete Analogues of the Mathematical Model 267
7.5.2 Comparative Analysis of the Simulation Results. 272
References. 282

8 The Arc Plasma Torches 285
8.1 The Features of the Arc Plasma Torches 285
8.2 The Arc Plasma Torches for Cutting and Spraying. 292
8.3 Simulation of the Arc Plasma Torches in the Channel 299
8.3.1 Models of the Arc Plasma Torches in the Channel 299
8.3.2 Analysis of the Simulation Results 307
8.4 Two-Dimensional Electromagnetic Problem for the Arc Plasma Torches. 315
8.4.1 Solution Using the Electric Potential. 318
8.4.2 Solution Using the Function of the Electric Current . . . 322
8.4.3 Calculation of the Electromagnetic Field of the Arc Plasma Torches 327
8.5 The Free Burning Arc Plasma Torches. 334
8.5.1 The Arc Plasma Torches for Welding and Melting of Metals. 334
8.5.2 Algorithms of the Mathematical Models 337
8.5.3 Comparative Analysis of the Simulation Results. 346
References. 364

9 Electrode Processes in the Arc Plasma Torches 367
9.1 Model of the Cathode Processes. 368
9.2 Calculation of the Cathode Processes 379
9.3 Thermal Problem of Heating the Cathode. 391
9.4 Model of the Anode Processes 395
References. 397

10 Heat Exchange and Movement of the Solid Particles in the Plasma. 399
10.1 The Basic Approaches to the Description of the Heat Exchange and Movement of the Particles in the Plasma. 401

10.1.1 The Criteria of Heat Transfer and Gas Dynamics of Particles . . . 401
10.1.2 The Non-gradient Heating and Movement of the Particles in the Plasma . . . 403
10.1.3 The Gradient Heating Particles in the Plasma . . . 407
10.1.4 Evaporation of Particles in the Plasma . . . 410
10.2 Calculation of the Heating and Movement of the Particles with the Given Parameters of the Plasma Flow . . . 415
10.2.1 Installation for Plasma Treatment of Powder Materials . . . 415
10.2.2 Solution for Equations of the Heating and Movement Particles . . . 418
10.3 The Model of Plasma, Loaded the Flow of Solid Particles . . . 425
References . . . 430

11 The Features of the Experimental Methods and Automated Diagnostic Systems of RF and Arc Plasma Torches . . . 431
11.1 The Experimental Setup and Automated Diagnostic System for the Study of the RF and Arc Plasma Torches . . . 431
11.1.1 Adjusting Elements in Optical System . . . 435
11.2 The Basic Methods of the Plasma Diagnostics . . . 438
11.3 Measurements of Plasma Parameters in the RF and Arc Plasma Torches . . . 449
References . . . 458

Erratum to: Classical Theory of the Particle Scattering . . . E1

Appendix A . . . 459

Appendix B . . . 465

Appendix C . . . 469

Appendix D . . . 479

Appendix E . . . 481
