

Contents

1	Introduction	1
1.1	Introduction	1
1.2	The Potential of Photovoltaics	1
1.3	Light Trapping for Thin Film Silicon Solar Cells	3
1.3.1	The NIR Problem	3
1.3.2	The Light-Trapping Potential	6
1.4	Scope and Outline of This Thesis	9
	References	10
2	Nanostructures for Enhanced Light-Trapping in Thin-Film Silicon Solar Cells	11
2.1	Introduction	11
2.2	The Main Light-Trapping Approaches	11
2.2.1	Non-diffractive Techniques	11
2.2.2	Refractive Approaches	13
2.2.3	Diffractive Approaches	14
2.3	The Lambertian Scatterer	18
2.3.1	Absorption Enhancement by a Lambertian Backscatterer	20
2.3.2	The Maximum Absorption Enhancement	25
2.4	Assessment of Light-Trapping	28
2.4.1	How to Assess Light-Trapping Structures for Solar Cells?	28
2.4.2	The Light-Trapping-Efficiency (LTE)	31
2.5	State of the Art	34
2.5.1	Important Milestones	34
2.5.2	The State of the Art	38

2.6	Concluding Remarks	42
2.6.1	Phase Engineering.	43
2.6.2	Dual Structuring	44
2.6.3	Electrical Performance.	45
	References.	45
3	Fabrication and Characterisation of Diffractive Nanostructures	53
3.1	Introduction	53
3.2	Nanolithography Techniques	53
3.2.1	Electron Beam Lithography.	53
3.2.2	Nanoimprint Lithography	55
3.3	Pattern Transfer by Reactive Ion Etching (RIE)	58
3.3.1	Dry-Etching in the RIE-System.	60
3.4	Absorption Measurements.	61
3.4.1	Reference Measurement – Thin Films.	61
3.5	Summary	63
	References.	63
4	Achievements	65
4.1	Introduction	65
4.2	Dual Gratings by a Simple Layer Transfer Technique	65
4.2.1	Why Dual Gratings?	66
4.2.2	A Novel Layer-Transfer Technique.	67
4.2.3	Proof of Principle Demonstration	68
4.3	Plasmonic and Diffractive Nanostructures for Light Trapping—An Experimental Comparison	72
4.3.1	Methodology.	73
4.3.2	Results	75
4.3.3	Discussion.	77
4.3.4	Comparison of the Two Different Approaches	80
4.3.5	Conclusions.	82
4.4	Summary	83
	References.	84
5	Conclusions and Outlook	87
5.1	General Conclusions and Remarks	87
5.1.1	Limitations and Future Work Left.	89
5.1.2	Outlook.	91
5.2	Can Solar Power Solve the World's Energy Crisis?	93
	References.	94
	Appendix A: A <i>Home-Made</i> UV Nanoimprint Tool	95
	Appendix B: Absorption Measurement Setup.	103

Diffraction Optics for Thin-Film Silicon Solar Cells

Schuster, C.S.

2017, XX, 114 p. 56 illus., 11 illus. in color., Hardcover

ISBN: 978-3-319-44277-8
