

Contents

1	Introduction	1
1.1	Motivation	1
1.2	Nonlinear Optical Spectroscopy	4
1.2.1	Nonlinear Spectroscopy of Potassium	8
1.2.2	Molecular Aggregates	10
1.3	Entangled Photons	12
1.3.1	Parametric Downconversion	13
1.3.2	Entangled-Photon Interferometry	15
1.3.3	Entangled-Photon Spectroscopy	17
1.4	Trapped Ions	22
1.5	Time and Energy Scales in This Dissertation	24
	References	25
2	Nonlinear Optical Signals	35
2.1	Motivation and Overview	35
2.2	Light-Matter Hamiltonian and Liouville Space Notation	37
2.2.1	Light-Matter Interaction	37
2.2.2	Liouville Space Notation	39
2.3	Quantum Optical Field Measurements	41
2.3.1	Field Measurements	42
2.3.2	Fluorescence Signals	47
2.3.3	Classical Versus Quantum Response Functions	49
2.4	Effective Interactions in Ion Chains	50
2.4.1	Phonon Excitation by Stimulated Raman Scattering	51
2.4.2	Electronic Transitions	61
2.5	Diagram Construction	62
2.5.1	Loop Diagrams	62
2.5.2	Unrestricted Loop Diagrams	67
2.5.3	Ladder Diagrams	70
2.5.4	Time Versus Frequency Domain Expressions	73
2.5.5	Impulsive Limit	74

2.6	Susceptibilities Versus Transition Amplitudes in the Quantum Domain.	75
2.6.1	Linear Absorption	75
2.6.2	Third-Order Absorption.	78
2.7	Synopsis: Diagrammatics in a Nutshell.	83
2.7.1	Loop Diagrams	84
2.7.2	Ladder Diagrams.	86
2.7.3	Benefits of the Diagrammatic Representation	88
	References.	89
3	Excited State Distributions and Fluorescence Signals.	93
3.1	Excursion: Matter Correlations Induced by Coupling to Quantum Light	94
3.1.1	Classical Coherent Light	98
3.1.2	Superpositions of Two-Photon Fock States	99
3.2	Excited State Distributions and Fluorescence	100
3.3	Two-Photon Induced Fluorescence (TPIF)	103
3.3.1	Entangled Two-Photon Induced Fluorescence	105
3.3.2	Intensity Crossover	108
3.4	The Bacterial Reaction Center	113
3.4.1	The System.	113
3.4.2	Entangled Photons.	116
3.4.3	Classical Light	120
3.4.4	Correlated Separable State.	121
3.5	Open Systems.	123
3.5.1	Ladder Diagrams.	123
3.5.2	Entangled Photons.	125
3.5.3	Correlated Separable State.	129
3.5.4	Time-Energy Uncertainty	131
3.6	Fluorescence Signals of the Bacterial Reaction Center	134
3.7	Summary	138
	References.	140
4	Pump-Probe Measurements with Entangled Photons	143
4.1	Absorption Signals	143
4.2	Pump-Probe-Like Signals of Model Systems	147
4.2.1	Linear Response	148
4.2.2	The Signal.	149
4.2.3	Off-Resonant Intermediate States.	153
4.2.4	Resonant Intermediate States.	154
4.2.5	Comparison: Classical Laser Pulses	159
4.2.6	Intensity Crossover	160
4.3	Pump-Probe Signals of the Bacterial Reaction Center	161
4.4	Summary	164
	References.	164

5 Interferometric Setups	167
5.1 Frequency-Resolved Measurements	168
5.1.1 Classical Measurements.	170
5.2 Two-State Jump Model.	171
5.2.1 Frequency Domain Expressions	173
5.2.2 Results	174
5.3 Interferometric Signals of the Bacterial Reaction Center.	181
5.3.1 Frequency Domain Signals	181
5.3.2 Classical Pump-Probe Signal.	182
5.3.3 Two-Photon Counting Setup.	184
5.4 Summary	188
References.	189
6 Frequency Conversion	191
6.1 Frequency Conversion Hamiltonian	192
6.2 Field Correlation Functions	195
6.2.1 Two-Point Correlation Function	195
6.2.2 Four-Point Correlation Function	197
6.3 Transition Amplitudes	198
6.4 Simulations.	200
6.5 Summary	203
References.	204
7 Trapped Ion Spectroscopy	205
7.1 Trapped Ion Systems	206
7.1.1 Motional Degrees of Freedom.	206
7.1.2 Electronic Degrees of Freedom.	208
7.2 Diagram Construction.	209
7.2.1 Diagram Rules	211
7.3 Three-Pulse Schemes - Single Quantum Coherence	212
7.3.1 Phonon Transport	212
7.3.2 Steady State Currents	216
7.3.3 (Quantum) Phase Transitions	218
7.3.4 Multiple Excitations in the SQC Signal	220
7.4 Five-Pulse Schemes - Double Quantum Coherence and Photon Echo	221
7.4.1 Detection of Anharmonicities	221
7.4.2 Multi-exciton Transport.	224
7.4.3 Population Decay	226
7.5 2D Lineshapes	228
7.6 Summary	230
References.	231

8 Conclusions and Outlook	233
References.	237
Appendix A: Parametric Downconversion	239
Appendix B: The Bacterial Reaction Center of <i>Blastochloris viridis</i>	255
References	258

Quantum-Enhanced Nonlinear Spectroscopy
