1	Introduction	1
1.1	Recent Advances and Current Challenges: A Brief Overview	1
1.2	Elements of Quantum Information Theory	4
1.2.1	Correlations in Composite Quantum Systems: Entanglement and Discord	6
1.2.2	Role of Correlated Quantum States in Quantum Information Theory	9
1.3	Controllable Quantum Systems	11
1.3.1	Trapped Ions	12
1.3.2	Cold Gases of Neutral Atoms in Optical Lattices	25
1.3.3	Photons and (Non-)linear Optics	28
1.3.4	Other Systems	29
1.4	The Certification of Large-Scale Quantum Devices	31
1.5	Nonlinear Spectroscopy	33
1.6	Theoretical Description of Composite Quantum Systems	37
1.6.1	Semiclassical Approximations and Mean-Field Theories	37
1.6.2	Complex Systems, Spectral Analysis, and Random Matrix Theory	38
1.6.3	Open Quantum Systems	41
1.6.4	Identical Particles	47
1.7	Quantum Phase Transitions	49
1.8	Scope and Structure of This Dissertation	52
	References	53
2	Local Detection of Correlations in Composite Quantum Systems	69
2.1	The Local Detection Protocol	69
2.1.1	Local Witness for Bipartite Quantum Discord	70
2.1.2	Local Bound for the Minimum Entanglement Potential	72
2.1.3	Efficacy of the Method	76

2.2	Trapped-Ion Experiment	77
2.2.1	Resonant Laser-Ion Interactions	77
2.2.2	The Effect of Small Detunings	82
2.2.3	The Local Detection Protocol for the First Blue Sideband.	85
2.2.4	Generalization to Arbitrary Sidebands.	94
2.2.5	Extension of the Experimental Technique.	97
2.3	Photonic Experiment.	97
2.3.1	The Pre-initial State	98
2.3.2	Preparation of the Initial State.	99
2.3.3	Local Dephasing Operation.	100
2.3.4	Reduced Distributions.	103
2.3.5	Total Trace Distance.	104
2.3.6	Open-System Evolution Depending on Initial Correlations.	104
2.3.7	Local Trace Distance.	105
2.4	Theoretical Studies of Further Examples	109
2.4.1	Atom-Photon Correlations During Spontaneous Decay	109
2.4.2	Many-Mode Extension of the Trapped-Ion Experiment: A Proposal	116
2.4.3	Quantum Phase Transition in a Transverse-Field Ising Chain	118
2.5	Discussion	123
	References.	125
3	From Local Operations to Collective Dephasing: Behavior of Correlated Quantum States	129
3.1	Creation of Quantum Discord by Local Operations	129
3.2	Correlation Rank: Schmidt Decomposition for Mixed States	131
3.3	Trapped-Ion Experiment.	133
3.3.1	Local Amplitude Damping	134
3.3.2	Collective Dephasing	135
3.4	General Dynamics of Collective Dephasing	139
3.4.1	Kraus Representation	140
3.4.2	Ensemble-Average Evolution: Interpretation and Non-Markovian Effects.	142
3.4.3	Robustness of Bipartite Entanglement.	143
3.4.4	Time-Invariant States: Multipartite Werner States	144
3.4.5	Robustness of Multipartite Entanglement	145
3.5	Discussion	148
	References.	148

4	Quantum Phase Transition in a Family of Quantum Magnets	151
4.1	Variable-Range Quantum Magnets: From Ising to Lipkin–Meshkov–Glick	151
4.1.1	A One-Parameter Family of Models	151
4.1.2	Special Case: Nearest-Neighbor Ising Model	153
4.1.3	Special Case: Fully-Connected Lipkin–Meshkov–Glick Model	153
4.2	Single-Spin Signatures of a Quantum Phase Transition	154
4.2.1	Distribution of Dephasing-Induced Excitations	155
4.3	Spectral Analysis	158
4.3.1	Density of States	160
4.3.2	Level Statistics	162
4.4	Semiclassical Mean-Field Description	164
4.4.1	Semiclassical Approximations and Quantum Phase Transitions	164
4.4.2	Spin Coherent States	166
4.4.3	Multidimensional Numerical Search for Critical Points	168
4.4.4	Analytical Critical Points from a Set of Single-Parameter Energy Landscapes	173
4.4.5	Performance of the Semiclassical Ansatz	181
4.4.6	Scaling of Highest and Lowest Eigenvalues	187
4.4.7	Distribution of Critical Fields	191
4.5	Discussion	196
	References	197
5	Multidimensional Nonlinear Spectroscopy of Controllable Quantum Systems	201
5.1	Introduction: Nonlinear Spectroscopy and Controllable Quantum Systems	201
5.2	Phase-Coherent Two-Pulse Measurements of Atomic Vapor	202
5.2.1	Atomic Vapor	203
5.2.2	Light-Matter Interactions	204
5.2.3	Fluorescence Measurements	205
5.2.4	Single Quantum Coherence	206
5.2.5	Phase Cycling	209
5.2.6	Second-Order Quantum Coherence	210
5.2.7	Higher-Order Quantum Coherence	216
5.2.8	Coupling to Vacuum Modes	217
5.2.9	Interpretation	220
5.3	Diagrammatic Description of Nonlinear Spectroscopic Experiments of Controllable Quantum Systems	220
5.3.1	Basic Elements for the Design of Nonlinear Measurement Schemes	221
5.3.2	Externally Induced Excitations and De-Excitations	222

5.3.3	Time Evolution and Readout.	223
5.3.4	Design of a Pulse-Sequence	224
5.4	Excitation and Readout Schemes for Trapped Ions.	225
5.4.1	Electronic Degree of Freedom: Dynamics.	226
5.4.2	Electronic Degree of Freedom: Excitation and Readout . . .	226
5.4.3	Vibrational Degree of Freedom: Dynamics	227
5.4.4	Vibrational Degree of Freedom: Excitation	228
5.4.5	Vibrational Degree of Freedom: Readout	233
5.5	Nonlinear Signals and Applications for Trapped-Ion Systems . . .	234
5.5.1	Two-Pulse Sequence: Single Quantum Coherence	236
5.5.2	Four-Pulse Sequence: Double Quantum Coherence.	247
5.5.3	Four-Pulse Sequence: Photon Echo.	250
5.6	Discussion	253
	References.	254
6	Open Quantum Systems of Identical Particles	257
6.1	Introduction: Identical Particles.	257
6.1.1	Symmetrized States.	258
6.1.2	The Single Particle Subspace	260
6.1.3	N -Particle Operators	262
6.1.4	The Single-Particle Density Operator and Partial Trace. . . .	262
6.2	General Formalism for Symmetrized States	263
6.3	Density Matrices and Expectation Values.	267
6.3.1	N -Particle Density Operator	267
6.3.2	Matrix Elements and Traces in a Larger Hilbert Space. . . .	268
6.3.3	M -Particle Reduced Density Operator.	269
6.3.4	Many-Body Hamiltonian.	271
6.3.5	Bosonic Product States	271
6.3.6	Field Operator Representation.	273
6.4	Coherent Dynamics of a Subgroup of Interacting Bosons.	276
6.4.1	Time Evolution of Many-Body Quantum Systems	276
6.4.2	The Gross–Pitaevskii Equation	278
6.4.3	Hierarchical Expansion of the Reduced Bosonic Dynamics	280
6.4.4	From the Hierarchical Expansion to Gross–Pitaevskii.	287
6.5	Second-Order Master Equation for Identical Particles: Incoherent Effects.	288
6.5.1	Single-Particle Subdynamics of a Two-Particle Bosonic System	289
6.5.2	General Ansatz: M -Particle Subdynamics of an N -Particle Bosonic System.	294
6.5.3	Operator Structures Within the Pure Product State Approximation	297
6.5.4	General Bosonic Master Equation Under the Pure Product State Assumption	302

6.5.5	Single-Particle Dynamics	303
6.5.6	Nonlinear Redfield-Type Equation	304
6.5.7	Mean-Field Approximation	305
6.6	Discussion	307
	References.	309
7	Summary and Conclusions	311
	References.	314
