

Contents

Part I The Basics

1	Setting the Scene: High Energy Photons and Particles	3
1.1	Astronomy as an Observational Science	3
1.2	The Electromagnetic Spectrum: The High Energy Side	4
1.3	Cosmic Rays, Neutrinos, Gravitational Waves, Dark Matter	5
1.4	Backgrounds	6
1.5	Observatory Sites	7
1.6	A Primer in Astronomical Nomenclature and Coordinates	7
	References	12
2	Radiation-Matter Interactions	13
2.1	Interactions of Charged Particles	13
2.1.1	Energy Loss by Ionization	14
2.1.2	Bremsstrahlung	17
2.1.3	Cherenkov Radiation	19
2.1.4	Transition Radiation	20
2.2	Interactions of Photons	21
2.2.1	Photoelectric Effect	21
2.2.2	Compton Scattering	22
2.2.3	Pair Production	23
2.2.4	Total Cross Section for Photons	24
2.3	Interaction of Hadrons	25
	References	26
3	Interactions of Photons and Particles Along the Path	27
3.1	Observational Horizons	27
3.2	The Atmosphere	29
3.3	Interaction of High Energy Photons: Electromagnetic Showers	30
3.4	Interaction of Cosmic Rays: Hadronic Showers	33
	References	36

Part II The World of Detectors

4	Detectors: General Characteristics	39
4.1	Detector Properties	39
4.2	Overview of Detectors	40
4.3	Historical Detectors	41
	References	42
5	Detectors Based on Ionization in Gases and Liquids	43
5.1	Ionization in Gases	43
5.2	Proportional Counters	45
5.3	Geiger-Muller Counters	47
5.4	Streamer Tubes	47
5.5	Multi-Wire Proportional Chambers	48
5.6	Drift Chambers	49
5.7	Microstrip Gas Chambers	49
5.8	Liquid Ionization Detectors	50
	References	50
6	Scintillation Detector Systems	51
6.1	Scintillators	51
6.2	Photomultiplier Tubes	54
6.3	Scintillator Systems	56
6.4	Gas Scintillation Proportional Counters	57
	References	57
7	Detectors Based on Ionization in Solid State Materials	59
7.1	Material Properties	59
7.2	Charge Coupled Devices (CCD)	62
	References	63
8	Cherenkov and Transition Radiation Detectors	65
8.1	Cherenkov Detectors	65
8.2	Transition Radiation Detectors	66
	References	67
9	Calorimeters	69
9.1	Electromagnetic Calorimeters	69
9.2	Hadron Calorimeters	71
9.3	Cryogenic Calorimeters	72
	References	73
10	Measurement of Physical Properties of Photons and Particles	75
10.1	Position and Tracking	75
10.2	Time of Flight	76
10.3	Energy	76

10.4	Momentum	77
10.5	Particle Identification	77
	References.	78

Part III High Energy Astronomy

11	Ultraviolet and X-Ray Astronomy	81
11.1	Typical Fluxes	81
11.2	Telescopes for Hard X-Rays.	82
11.3	Telescopes for Soft X-Rays	84
11.4	UV and X-Ray Spectroscopy	86
11.5	X-Ray Polarimetry	87
11.6	UV and X-Ray Observatories	87
	References.	89
12	Gamma Ray Astronomy	91
12.1	Gamma Ray Sources	91
12.2	Low Energy Gamma Rays: Direct Detection in Space	93
12.2.1	Scintillator Systems	94
12.2.2	Compton Telescopes	95
12.2.3	Pair Conversion Telescopes.	97
12.2.4	Space Based Observatories	97
12.3	High Energy Gamma Rays: Ground Based Detectors.	99
12.3.1	Imaging Atmospheric Cherenkov Telescopes	100
12.3.2	Air Shower Arrays	102
	References.	104
13	Cosmic Ray Astronomy	105
13.1	Cosmic Rays Sources Fluxes	105
13.2	Low Energy Cosmic Rays: Direct Detection in Space	106
13.2.1	Modern Observatories	108
13.3	High Energy Cosmic Rays: Ground Based Detection.	110
13.3.1	Extensive Air Shower Arrays	110
13.3.2	Fluorescence Detection	112
13.3.3	Hybrid Detectors	113
13.3.4	Radio Detection of Showers	114
	References.	114
14	Neutrino Astronomy	115
14.1	Neutrino Fluxes	115
14.2	Neutrino Telescopes	115
14.3	Solar Neutrino Detection	119
14.4	Neutrino from Supernova Collapse.	121
	References.	121

15	Gravitational Wave Astronomy	123
15.1	Orders of Magnitude.	123
15.2	Resonant Detectors.	125
15.3	Interferometric Detectors.	127
15.4	Pulsar Timing.	134
15.5	Gravitational Observatories.	135
	References.	138
16	The Dark Side of the Universe	141
16.1	Dark Matter	141
16.1.1	Direct Detection of Dark Matter	142
16.1.2	Indirect Searches of Dark Matter.	144
16.2	Dark Energy	145
	References.	146
17	Observing in High Energy Astrophysics	147
17.1	Observation Planning	147
17.1.1	Signal to Noise Ratio in Gamma Ray Astronomy Telescopes.	147
17.1.2	Signal to Noise Ratio in Atmospheric Cherenkov Detectors	148
17.1.3	Signal to Noise Ratio in X-Ray Telescopes.	149
17.2	Observing and Data Analysis Techniques.	149
17.2.1	Gamma Ray Data Analysis	149
17.2.2	Atmospheric Cherenkov Data Analysis	150
17.2.3	X-Ray Data Analysis.	151
17.2.4	Gravitational Wave Data Analysis.	152
17.3	Software	156
	References.	157
18	Conclusions	159
	References.	160
	Index	161

High Energy Astrophysical Techniques

Poggiani, R.

2017, XIV, 163 p. 64 illus., Hardcover
