

Contents

1	Mathematical Foundation for Quantum System	1
1.1	System, State, and Measurement	1
1.2	Composite System	6
1.2.1	Tensor Product System	6
1.2.2	Entangled State	7
1.3	Many-Body System	10
1.4	Hamiltonian	11
1.4.1	Dynamics and Hamiltonian	11
1.4.2	Simultaneous Diagonalization	12
1.4.3	Relation to Representation	13
1.5	Relation to Symmetry	14
1.6	Remark for Unbounded Case*	15
2	Group Representation Theory	21
2.1	Group and Homogeneous Space	21
2.1.1	Group	21
2.1.2	Homogeneous Space	24
2.2	Extension of Group	28
2.2.1	General Case	28
2.2.2	Central Extension of a Commutative Group	33
2.2.3	Examples for Central Extensions	34
2.3	Representation and Projective Representation	37
2.3.1	Definitions of Representation and Projective Representation	37
2.3.2	Schur's Lemma	41
2.3.3	Representations of Direct Product Group	44
2.4	Projective Representation and Extension of Group	45
2.4.1	Factor System of Projective Representation	45
2.4.2	Irreducibility and Projective Representation	47
2.4.3	Extension by $U(1)$	48

2.5	Semi Direct Product and Its Representation	49
2.5.1	From $H \rtimes K$ to K and H	49
2.5.2	From K and H to $H \rtimes K^*$	50
2.6	Real Representation and Complex Conjugate Representation . . .	52
2.6.1	Real Linear Space and Its Complexification	52
2.6.2	Real Representation.	52
2.6.3	Complex Conjugate Representation.	53
2.7	Representation on Composite System.	55
2.8	Fourier Transform for Finite Group	58
2.8.1	Discrete Fourier Transform	58
2.8.2	Character and Orthogonality	59
2.8.3	Fourier Transform	63
2.9	Representation of Permutation Group and Young Diagram	64
2.9.1	Young Diagram and Young Tableau.	64
2.9.2	Permutation Group and Young Diagram	66
2.9.3	Plancherel Measure	67
3	Foundation of Representation Theory of Lie Group	
	and Lie Algebra.	69
3.1	Lie Group.	69
3.1.1	Basic Examples.	69
3.1.2	Symmetry in Analytical Mechanics.	72
3.1.3	Complex Lie Group.	74
3.1.4	Other Examples of Real Lie Groups	74
3.2	Lie Algebra	75
3.3	Relation Between Lie Group and Lie Algebra I.	78
3.3.1	Infinitesimal Transformation and Lie Algebra.	78
3.3.2	Examples.	80
3.3.3	Central Extension of Real Lie Algebra	83
3.4	Representation of Lie Algebra	84
3.4.1	Representation of Real Lie Algebra.	84
3.4.2	Real Representation.	86
3.4.3	Representation of Complex Lie Algebra	87
3.4.4	Adjoint Representation	87
3.4.5	Projective Representation.	88
3.4.6	Semi Direct Product Lie Algebra and Representation . . .	89
3.5	Killing Form and Compactness.	90
3.5.1	Killing Form	90
3.5.2	Compactness of Real Lie Algebra \mathfrak{g}	91
3.5.3	Casimir Operator.	94
3.6	Relation Between Lie Group and Lie Algebra II	95
3.6.1	Universal Covering Group.	95
3.6.2	Relation to Representation.	98
3.6.3	Projective Representation.	100
3.6.4	Representation for Complex Lie Groups	101

3.7	Invariant Measures on Group and Homogeneous Space	101
3.8	Fourier Transform on Lie Group	104
3.8.1	Commutative Case	104
3.8.2	Non-commutative Case	107
4	Representations of Typical Lie Groups and Typical Lie Algebras	113
4.1	$SL(2, \mathbb{C})$ and Its Subgroup	113
4.1.1	Gauss Decomposition of $SL(2, \mathbb{C})$	114
4.1.2	Structure of $SU(2)$	114
4.1.3	Structure of $SU(1, 1)$	116
4.2	Irreducible Skew-Hermitian Representation of $\mathfrak{su}(2)$ and $\mathfrak{su}(1, 1)$	119
4.2.1	Construction of Irreducible Skew-Hermitian Representation	119
4.2.2	Unitary Representation and Real Representation of Lie Group	122
4.2.3	Casimir Operator	123
4.2.4	Tensor Product	124
4.2.5	Coherent Vector	127
4.3	Irreducible Unitary Representations of $SU(r)$ and $U(r)$	129
4.3.1	Irreducible Unitary Representation of $SU(r)$	129
4.3.2	Irreducible Unitary Representation of $U(r)$	131
4.3.3	Dimension of Irreducible Representation Space.	133
4.3.4	Tensor Product	134
4.3.5	Irreducible Representation of $SL(r, \mathbb{C})$, $GL(r, \mathbb{C})$	136
4.4	Many-Particle System: Composite System of n Quantum Systems	137
4.4.1	Distinguishable Particles: Schur Duality	137
4.4.2	Indistinguishable Particles: Boson and Fermion.	139
4.5	Discretization of Lie Group and Homogeneous Space	143
4.5.1	Design on Group.	143
4.5.2	Design on Homogeneous Space	147
4.5.3	Approximating Design.	148
5	Application to Physical Systems	151
5.1	3-Dimensional Physical System	151
5.1.1	Orbital Angular Momentum	151
5.1.2	Hamiltonian with Central Potential	156
5.2	Laplacian on Sphere	158
5.2.1	General Case	158
5.2.2	Three-Dimensional Sphere.	162
5.3	Hydrogen-Type Hamiltonian and $SO(4, \mathbb{R})$	164
5.3.1	Puzzle for Degeneracy.	164
5.3.2	Symmetry Based on $SO(4, \mathbb{R})$	166

5.3.3	Fourier Transform of Coulomb Potential*	173
5.4	Spin-Orbit Interaction	175
5.5	Quark Model	177
5.5.1	Quark and Anti-quark	177
5.5.2	Meson	179
5.5.3	Baryon.	181
5.5.4	Charm Quark.	183
5.5.5	Six Quarks	185
5.6	Uncertainty Relations	185
5.6.1	Uncertainty Relation on \mathbb{R} .	186
5.6.2	Periodic Function Space and Mathieu Equation*.	187
5.6.3	Uncertainty Relation on S^1 *	188
5.6.4	Uncertainty Relation on S^3 *	193
6	Representation of General Lie Groups and General Lie Algebras	201
6.1	Root System and Its Classification*	201
6.2	Structure of Compact Lie Algebra*	205
6.3	Structure of Complex Semi Simple Lie Algebra*	208
6.3.1	Complex Semi Simple Lie Algebra.	208
6.3.2	Relation to Compact Semi Simple Lie Algebra.	210
6.4	Skew-Hermitian Representation of Compact Semi Simple Lie Algebra*.	211
6.5	Subalgebra and Root Subsystem*.	213
6.6	Structure of $\mathfrak{sp}(r)$ *	219
6.7	Complex Structure and Coherent State*.	221
6.8	Structure of Non-compact Semi Simple Lie Algebra*	223
6.9	Skew-Hermitian Representation of Non-compact Simple Lie Algebra*.	225
6.10	General Non-compact Lie Algebra and Its Skew-Hermitian Representation*	227
7	Bosonic System and Quantum Optics	231
7.1	One-Mode Bosonic System	231
7.1.1	One-Variable System.	231
7.1.2	One-Mode Bosonic System and One-Variable System.	233
7.1.3	Extended Heisenberg Representation.	237
7.2	Multi-mode Bosonic System.	239
7.2.1	Multi-variable System	239
7.2.2	Relation Between Multi-mode Bosonic System and Multi-variable System.	240

7.3	Transformation by Unitary Group $U(r)$	242
7.3.1	Correlation by Beam Splitter	242
7.3.2	Transformation Corresponding to the Irreducible Decomposition.	245
7.3.3	Representation of Semi Direct Product Lie Group $H(2r, \mathbb{R}) \ltimes U(r)$ and Its Coherent State*	246
7.4	Second Quantization and Boson	248
7.5	Squeezed State on One-Mode Bosonic System.	249
7.6	Squeezed State on Two-Mode Bosonic System*	253
7.7	Wigner Function and Fourier Transform of Heisenberg Representation*	255
7.7.1	Fourier Transform of Heisenberg Representation.	255
7.7.2	Uncertainty Relation with Wigner Function	257
7.8	Squeezed State on Multi-mode Bosonic System*	259
8	Discretization of Bosonic System	263
8.1	Discrete Heisenberg Representation	263
8.1.1	Discrete Heisenberg Representation on \mathbb{Z}_d	263
8.1.2	Discrete Heisenberg Representation on \mathbb{F}_q	266
8.1.3	Multi-mode Discrete Heisenberg Representation	268
8.1.4	Irreducible Representation of Subgroup.	271
8.2	Discrete Symplectic Group and Clifford Group	273
8.2.1	Definitions of Discrete Symplectic Group and Clifford Group	273
8.2.2	Generator.	274
8.2.3	Structure of Self-orthogonal Subgroup	277
8.3	Metaplectic Representation	278
8.3.1	Existence of Projective Unitary Representation	278
8.3.2	Concrete Construction of Representation.	279
8.3.3	Properties of Irreducible Decomposition	281
8.4	MUB and SIC Vectors*	285
	Appendix A: Solutions of Exercises	291
	References	321
	Curriculum Vitae	327
	Index	333

Group Representation for Quantum Theory

Hayashi, M.

2017, XXVIII, 338 p. 54 illus., 1 illus. in color., Hardcover

ISBN: 978-3-319-44904-3
