

Contents

1	Introduction	1
1.1	Background to Industrial Robotics	1
1.2	Industrial Robot Faults	2
1.3	Overview of Maintenance Strategies	3
1.4	Background to Condition-Based Monitoring (Maintenance)	5
1.5	Challenges	7
1.6	Aims and Objectives	7
1.7	Outline of the Thesis	8
	References	9
2	Literature Review	11
2.1	Condition Monitoring Approaches	11
2.1.1	Model-Based Approach	12
2.1.2	Data-Driven or Model-Free Approach	14
2.2	Condition Monitoring Techniques	24
2.2.1	Vibration Condition Monitoring	25
2.2.2	Noise, Ultrasound and Acoustic Emission (AE) Condition Monitoring Techniques	27
2.2.3	Motor Current Signature Analysis	29
2.3	Embedded Systems for Condition Monitoring Applications	32
2.3.1	Wired Systems	33
2.3.2	Wireless Systems	34
2.4	Applications of Condition Monitoring Techniques in Industrial Robots	37
2.5	Summary	43
	References	45
3	Signal Processing Techniques for Condition Monitoring	53
3.1	The Proposed Intelligent Condition Monitoring Algorithm	53
3.2	Basic Concepts of Signals	55

3.3	Signal Analysis Techniques	56
3.3.1	Time-Domain Signal Analysis Technique	56
3.3.2	Frequency-Domain Signal Analysis Technique	59
3.3.3	Time-Frequency Signal Analysis Technique	61
3.4	Discrete Wavelet Transform (DWT).	65
3.4.1	Multi-resolution Analysis Using DWT	66
3.4.2	Selection the Optimum Mother Wavelet	68
3.5	Summary	70
	References.	71
4	PUMA 560 Robot and Its Dynamic Characteristics	75
4.1	PUMA 560 Industrial Robot—General Overview.	75
4.2	Modal Analysis.	77
4.2.1	Frequency Response Function (FRF).	78
4.2.2	Coherence	79
4.2.3	Description of the Measuring Equipment.	79
4.3	Experimental Considerations.	81
4.3.1	Settings of SignalCalc ACE Software	81
4.3.2	Measurement System Calibration.	83
4.3.3	Coherency Checking	83
4.4	Results of FRF Analysis.	85
4.5	Summary	90
	References.	90
5	Robot Hardware, Transmission Faults and Data Acquisition	93
5.1	Mechanical Construction of the PUMA 560 Elbow Joint (3)	93
5.2	Gears General Overview.	95
5.3	Transmission Error in Gears	97
5.3.1	Mounting Errors	98
5.4	Common Gear Faults	100
5.4.1	Backlash in Gears Pair	101
5.4.2	Scuffing.	101
5.4.3	Abrasive Wear.	101
5.4.4	Pitting or Surface Fatigue	102
5.4.5	Tooth Breakage	102
5.5	Rolling Bearings General Overview	103
5.6	Common Rolling Bearing Faults	104
5.7	Rolling Bearing Characteristic Frequencies.	106
5.8	Fault Simulation in the Robot.	108
5.8.1	Backlash Fault Simulation.	108
5.8.2	Gear Tooth Fault Simulation	110
5.8.3	Bearing Fault Simulation.	113

5.9	Data Acquisition Hardware for Preliminary Vibration Analysis	114
5.9.1	Accelerometer	114
5.9.2	Data Acquisition Card (DAQ)	118
5.10	Vibration Data Acquisition and Analysis Software	120
5.11	The Experimental Set-up	121
5.12	Summary	122
	References.	123
6	Robot Vibration Analysis and Feature Extraction	125
6.1	Pick and Place Task	125
6.2	Robot Fault Detection Whilst Executing Pick and Place Task	127
6.2.1	Backlash Fault Simulation Results.	128
6.2.2	Gear Tooth Fault Simulation Results.	131
6.2.3	Bearing Fault Simulation Results.	134
6.3	Robot Fault Diagnosis	137
6.3.1	Signal Analysis Using DWT	139
6.3.2	Result of the DWT Analysis	140
6.3.3	Feature Extraction from the DWT Result	144
6.4	Fault Diagnosis Using Combined DWT and FFT.	148
6.5	Summary	154
	References.	154
7	Intelligent Condition Monitoring System Design.	157
7.1	Fault Detection Stage	157
7.1.1	Principle of Control Charts	157
7.1.2	Control Chart Limits	159
7.1.3	Normality Distribution Test.	160
7.1.4	Control Chart Design.	161
7.1.5	Performance Testing of the Designed Control Charts.	163
7.2	Fault Diagnosis Stage.	164
7.2.1	Biological and Artificial Neurons	164
7.2.2	Activation Functions	166
7.2.3	Neural Network Architectures	166
7.2.4	Multilayer Perceptron Neural Network	168
7.2.5	Learning Techniques	168
7.2.6	Training the MLPN.	170
7.2.7	Setting Up the MLPN	172
7.2.8	Design of a MLPN for Fault Diagnosis.	173
7.2.9	Performance Testing of the Designed ANN.	177
7.3	Summary	179
	References.	179

8	Embedded System Design	181
8.1	Rationale.	181
8.2	Available Wireless Sensor Network Modules	182
8.3	Wireless Sensor Network Topologies	183
8.4	Design of the Sensor Node (End Device).	184
8.4.1	Microcontroller Selection.	185
8.4.2	Wireless Technology Selection	187
8.4.3	ZigBee Module Selection	188
8.4.4	Antenna Type	190
8.4.5	Power Source Selection.	191
8.5	Design of the Base Station Node	192
8.5.1	Digital Signal Processor (DSP) Selection	193
8.5.2	TMS320C6713 DSK	194
8.5.3	Daughter Card Interface	196
8.6	XBee Modules Configuration	198
8.7	Coverage Range Test	201
8.7.1	Test's Scenarios and Result.	202
8.8	Final System Hardware.	204
8.9	Summary	206
	References.	207
9	Embedded Software Design, System Testing and Validation	209
9.1	Wireless Node Software Development Tool	209
9.2	Base Station Software Development Tools	210
9.3	Designed Embedded Software	211
9.4	Overview of the Developed Base Station Code	216
9.5	Overview of the Developed Sensor Node Code	218
9.6	Embedded System Testing and Result	220
9.6.1	Wireless Signal Capturing	220
9.6.2	Validation of the Fault Detection Stage Based on Embedded System	222
9.6.3	Validation of DWT Based on Embedded System	225
9.6.4	Validation of the Designed ANN Based on Embedded System	227
9.7	Sensor Node Power Consumption Analysis	228
9.8	Summary	229
	References.	230
10	Conclusions and Future Work	231
10.1	Conclusions	231
10.2	Contribution to Knowledge.	234
10.3	Summary of Achievements.	235
10.4	Recommendations for Future Work	236
	References.	241

Appendix A: Datasheets of the Used Equipment in EMA	243
Appendix B: Setting up the Preliminary Data Acquisition System	247
Appendix C: VAL II Programme and Result of the DWT and FFT	257
Appendix D: Performance Testing Result of the Designed ANN.	277

Design of an Intelligent Embedded System for Condition
Monitoring of an Industrial Robot
