1	Introduction	1
1.1	Power System Stability	1
1.1.1	Oscillations in Power System	2
1.2	Subsynchronous Resonance	3
1.2.1	Self Excitation	3
1.2.2	Transient Torques Amplification	4
1.3	Known Cases of Subsynchronous Resonance	4
1.3.1	The Mohave Incidents	5
1.3.2	Navajo Project	6
1.3.3	HVDC Turbine Generator Interactions at Square Butte	6
1.4	HVDC Transmission	7
1.5	HVDC Technology	7
1.5.1	LCC-HVDC	7
1.5.2	VSC-HVDC	10
1.6	Past Research on Subsynchronous Resonance (SSR)	13
1.6.1	Analysis Methods	14
1.6.2	Potential Sources of Subsynchronous Oscillations	15
1.6.3	Mitigation of SSR	18
1.6.4	Summary of Past Research	29
1.7	Research Aims and Objectives	30
1.8	Main Contributions of This Research	31
1.9	Thesis Overview	32
	References	33
2	Power System Modelling and SSR Analysis Methods	39
2.1	Synchronous Generators	39
2.2	Modelling Power System Components	42
2.2.1	Modelling Synchronous Generators	42
2.2.2	Modelling Turbine Generator Mechanical System	43
2.2.3	Generator Excitation Systems	46

2.2.4	Power System Stabilizers.	48
2.2.5	Transmission Lines	49
2.2.6	Loads	49
2.3	HVDC System Modelling.	50
2.3.1	LCC-HVDC Converters	50
2.3.2	Converter Transformer Model	51
2.3.3	LCC Converter Controls	51
2.3.4	VSC-HVDC Converters	51
2.3.5	VSC-HVDC Controls	52
2.3.6	VSC Control Structure	55
2.4	Thyristor Controlled Series Capacitors (TCSCs).	56
2.5	SSR Analysis Methods.	58
2.5.1	Frequency Scanning Method	58
2.5.2	Eigenvalue Analysis	60
2.5.3	Electromagnetic Transients Simulations.	62
2.6	Comparison of SSR Analysis Methods.	62
2.7	Test Networks	63
2.7.1	Test Network 1	63
2.7.2	Test Network 2	64
2.8	Summary	64

3 Ranking of Generators Based on the Exposure to Subsynchronous Resonance

3.1	Frequency Scanning Methods.	67
3.1.1	Simplified Analytical Method	67
3.2	Two Axis Analytical Method	70
3.3	Test Signal Method	71
3.4	Choice of Frequency Scanning Method	72
3.4.1	Validation of Frequency Scanning Program	73
3.5	Modified Test System 1	74
3.6	Indices for Assessing Generator Exposure to SSR	75
3.7	Index for Assessing Self Excitation Due to Torsional Interactions (RI_{SSR}).	77
3.7.1	RI_{SSR} for 70 % Compensation.	80
3.7.2	Effect of Compensation Level and Network Topology on Ranking of Generators Using RI_{SSR}	82
3.8	Index for Assessing Amplification of Transients Torques.	90
3.9	Ranking of the Generators	94
3.10	Verification of Generator Ranking	94
3.11	Effect of Different Compensation of Lines	96
3.11.1	Uncompensated Line in Parallel with Compensated Line.	96
3.11.2	Uneven Compensation of Parallel Lines	97
3.11.3	Asymmetrical Compensation	99

3.12	Effect of VSC-HVDC Line on Generator Ranking	102
3.13	Summary	104
	References.	105
4	Methodology for the Evaluation of Risk of Subsynchronous Resonance	107
4.1	Methodology for Risk Evaluation of SSR	108
4.1.1	Line Outage Model	108
4.1.2	Selecting System Contingencies and Calculating Their Probabilities	109
4.1.3	Calculation of Risk Index	111
4.1.4	Modified Test System	112
4.2	Risk Evaluation of SSR	113
4.2.1	Example of Risk Evaluation for G1	113
4.2.2	Risk Matrix	119
4.3	Summary	124
	References.	125
5	Influence of Uncertainties in Mechanical Parameters	127
5.1	Influence of Uncertainties in Meshed AC/DC Networks.	127
5.1.1	Modification in the Test System	128
5.1.2	Modelling Uncertainty in Mechanical Parameters	130
5.1.3	Analysis Methods	130
5.1.4	The Influence of Uncertainties.	130
5.1.5	Results of Modal Analysis	140
5.2	LCC-HVDC Versus VSC-HVDC.	142
5.3	Effect of Uncertainty in Mechanical Parameters on Peak Torques Due to Different Types of Faults	143
5.3.1	Three Phase Short Circuit	143
5.3.2	Two Phase to Ground Short Circuit	149
5.3.3	Influence of Different Types of Lines	157
5.4	Effect of Uncertainty in Mechanical Parameters on Risk of Subsynchronous Resonance with Different Types of Compensation Schemes	159
5.4.1	Modelling Uncertainty in Mechanical Parameters of Turbine Generator.	159
5.5	Effect of Uncertainty on Dynamic Instability	160
5.5.1	Critically Compensated System	160
5.5.2	SSR Analysis	160
5.6	Effect of Uncertainty on Transient Torque Amplification	161
5.7	Dynamic Stability Analysis in the Presence of Uncertainties in Shaft Mechanical Parameters	162
5.7.1	Dynamic Stability Analysis in the Presence of Uncertainties in Shaft Mechanical Parameters.	164

5.7.2	Effect of Uncertainties on Level of Risk of SSR for Different Compensation Schemes.	168
5.8	Summary	169
	References.	170
6	Optimal Series Compensation of Lines to Minimize the Exposure of Generators to SSR.	171
6.1	Mitigating SSR with TCSC	171
6.2	Methodology	172
6.2.1	SSR Severity Measure.	173
6.2.2	Selection of Network Contingencies	173
6.2.3	Probability of Network Contingencies.	173
6.2.4	Assessment of Risk of SSR.	173
6.2.5	Modified Test System	174
6.2.6	Application of Proposed Method.	176
6.2.7	Validation of Results with EMT Simulation	182
6.3	Summary	184
	References.	184
7	Future Work and Conclusions	187
7.1	Conclusions	187
7.2	Future Work.	189
	References.	191
