

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	A Brief Overview of the Standard Model	2
1.2	The Need for BSM Physics	6
1.2.1	Theoretical Problems: Hierarchy and Aesthetics	7
1.2.2	Observational Problems: Dark Matter and Others	10
1.3	Supersymmetry	13
1.3.1	Supersymmetric Lagrangians	14
1.3.2	The MSSM	16
1.4	Dark Matter: The Last Gasp of WIMPs?	21
	References	24
<b>2</b>	<b>At Least a Higgs Boson</b>	<b>29</b>
2.1	Pre-LHC Constraints on the Higgs Boson	30
2.2	Production and Decay of the SM Higgs Boson at the LHC	34
2.3	Discovery and Measurements at the LHC	36
2.4	Constraining New Physics with the LHC Higgs Results	41
2.5	The Excitement About an Excess in the Diphoton Channel in 2012	49
2.5.1	Framework	50
2.5.2	Experimental Inputs and Fitting Procedure	52
2.5.3	Fits to Reduced Higgs Couplings	55
2.5.4	Application to Two-Higgs-Doublet Models	61
2.5.5	Conclusions	64
2.6	The Status of Higgs Couplings After Moriond 2013	66
2.6.1	Methodology and Combined Signal Strengths Ellipses	68
2.6.2	Fits to Reduced Higgs Couplings	71
2.6.3	Interplay with Direct Dark Matter Searches	77
2.6.4	Application to Two-Higgs-Doublet Models	79
2.6.5	Application to the Inert Doublet Model	81
2.6.6	Conclusions	84

2.7	A Bayesian View of the Higgs Sector with Higher Dimensional Operators . . . . .	85
2.7.1	Electroweak Higher-Dimension Operators . . . . .	86
2.7.2	Data Treatment . . . . .	92
2.7.3	On Weak Bosons Tensorial Couplings . . . . .	95
2.7.4	Deviations Caused by New Physics. . . . .	99
2.7.5	Bayesian Setup and Low- $\Lambda$ Scenario . . . . .	102
2.7.6	Inference on HDOs . . . . .	105
2.7.7	Conclusions. . . . .	113
2.8	The Phenomenological MSSM in View of the 125 GeV Higgs Data . . . . .	114
2.8.1	Analysis . . . . .	116
2.8.2	Results. . . . .	120
2.8.3	Conclusions. . . . .	132
2.9	Lilith: A New Public Tool for Constraining BSM Scenarios from Higgs Measurements . . . . .	134
2.10	Some Thoughts on the Future of Higgs Measurements and Likelihoods . . . . .	135
2.10.1	Signal Strengths. . . . .	136
2.10.2	Fiducial Cross Sections . . . . .	138
	References. . . . .	140
<b>3</b>	<b>Interpreting LHC Searches for New Physics. . . . .</b>	<b>153</b>
3.1	Constraining New Physics with Simplified Models . . . . .	157
3.2	LHC Constraints on Light Neutralino Dark Matter in the MSSM . . . . .	162
3.2.1	Setup of the Numerical Analysis. . . . .	164
3.2.2	Experimental Constraints. . . . .	165
3.2.3	Results. . . . .	168
3.2.4	Conclusions. . . . .	173
3.3	Status of the Mixed Sneutrino Dark Matter Model. . . . .	173
3.3.1	Framework . . . . .	175
3.3.2	Analysis . . . . .	176
3.3.3	Status of June 2012. . . . .	187
3.3.4	Status of June 2014. . . . .	197
3.3.5	Conclusions. . . . .	200
3.4	Introduction to Analysis Reimplementation . . . . .	201
3.5	Reimplementing Analyses Within MadAnalysis 5 . . . . .	209
3.5.1	Creation of an Analysis Template . . . . .	211
3.5.2	Merging Several Analyses in a Single Working Directory . . . . .	212
3.5.3	Coding of an Analysis. . . . .	213
3.5.4	Compiling and Executing the Analysis . . . . .	232
3.5.5	The Structure of the Output of an Analysis. . . . .	232
3.5.6	Modifications to Delphes: Delphes-MA5tune . . . . .	234

- 3.5.7 Limit Setting . . . . . 236
    - 3.5.8 Conclusions. . . . . 238
  - 3.6 CMS Search for Stops in the Single-Lepton Final State . . . . . 238
  - 3.7 ATLAS Search for Electroweak-Inos and Sleptons  
in the Di-lepton Final State. . . . . 242
  - References. . . . . 246
- 4 Conclusions . . . . . 255**
- Reference . . . . . 259

Higgs, Supersymmetry and Dark Matter After Run I of  
the LHC

Dumont, B.

2017, XVII, 259 p. 95 illus., 50 illus. in color., Hardcover

ISBN: 978-3-319-44955-5
