1	Introduction	1
1.1	Summary	1
1.2	Outline of Contents	6
	References	8
 Part I Horizontal and Near Horizontal Wavy Flow		
2	Fixed-Flux Model	11
2.1	Introduction	11
2.2	Compressible Two-Fluid Model	13
2.2.1	One-Dimensional Model Equations	13
2.2.2	Characteristics	14
2.3	Incompressible Two-Fluid Model	17
2.3.1	One-Dimensional Model Equations	17
2.3.2	Derivation of the Fixed-Flux Model	19
2.4	Linear Stability	23
2.4.1	Dispersion Relation for the Kelvin–Helmholtz Instability ($F = 0$)	23
2.4.2	Dispersion Relation for the SWT Instability ($F \neq 0$)	28
2.4.3	Sheltering Effect	33
2.5	Numerical Stability	35
2.5.1	Obtaining a Well-Posed Numerical Model	35
2.5.2	First-Order Semi-Implicit Scheme (Inviscid)	35
2.5.3	First-Order Semi-Implicit Scheme (with Viscous Terms)	42
2.5.4	First-Order Fully Implicit Scheme (with Viscous Terms)	44
2.5.5	Second-Order Semi-Implicit Scheme	46

2.6	Verification	49
2.6.1	Kreiss–Yström Equations	49
2.6.2	Characteristic Analysis	49
2.6.3	Dispersion Relation	51
2.6.4	Method of Manufactured Solutions	53
2.6.5	Water Faucet Problem	57
2.7	Kelvin–Helmholtz Instability	59
2.8	Summary and Discussion	61
	References	62
3	Two-Fluid Model	65
3.1	Introduction	65
3.2	Incompressible Two-Fluid Model	66
3.3	Linear Stability	68
3.3.1	Characteristics	68
3.3.2	Dispersion Analysis	70
3.3.3	KH Instability	71
3.4	Numerical Stability	73
3.4.1	TFIT Two-Fluid Model	74
3.4.2	Staggered Cell Structure	74
3.4.3	First-Order Semi-Implicit Scheme	77
3.4.4	Implicit Pressure Poisson Equation	78
3.4.5	von Neumann Analysis	79
3.4.6	Numerical Regularization	82
3.4.7	Second-Order Semi-implicit Scheme	84
3.5	Verification	87
3.5.1	Sine Wave	87
3.5.2	Water Faucet Problem	88
3.5.3	Modified Water Faucet Problem	91
3.5.4	Convergence	92
3.6	Nonlinear Simulations	93
3.6.1	Thorpe Experiment	93
3.6.2	Viscous Stresses	95
3.6.3	Wall Shear	96
3.6.4	Interfacial Shear	97
3.6.5	Single Nonlinear Wave	97
3.6.6	Thorpe Experiment Validation	98
3.6.7	Convergence	100
3.7	Summary and Discussion	103
	References	104
4	Fixed-Flux Model Chaos	107
4.1	Introduction	108
4.2	Chaos and the Kreiss and Yström Equations	109
4.2.1	Nonlinear Simulations	109
4.2.2	Sensitivity to Initial Conditions	111

4.2.3	Lyapunov Exponent	112
4.2.4	Fractal Dimension	114
4.2.5	The Route to Chaos	116
4.2.6	Numerical Convergence	120
4.3	Fixed-Flux Model Chaos	122
4.3.1	Nonlinear Simulations with the FFM	122
4.3.2	Extension of Thorpe Experiment into Chaos	122
4.3.3	Fixed-Flux Model for Fully Developed Laminar Flow in a Pipe	124
4.3.4	Kelvin–Helmholtz Instability	128
4.3.5	Nonlinear Simulations	130
4.3.6	Lyapunov Exponent	132
4.3.7	Numerical Convergence	133
4.3.8	Fractal Dimension	134
4.4	Summary and Discussion	134
	References	137

Part II Vertical Bubbly Flow

5	Fixed-Flux Model	141
5.1	Introduction	141
5.2	Compressible Two-Fluid Model	142
5.2.1	Compressible Model Equations	142
5.2.2	Virtual Mass Force	143
5.3	Incompressible Two-Fluid Model	144
5.3.1	Interfacial Pressure	145
5.3.2	Fixed-Flux Model Derivation	145
5.4	Linear Stability	148
5.4.1	Characteristic Analysis	148
5.4.2	Collision Force	149
5.4.3	Dispersion Relation: Kinematic Instability	151
5.4.4	Drag Force	152
5.5	Nonlinear Simulations	155
5.5.1	Stable Wave Evolution	155
5.5.2	Kinematically Unstable Waves in Guinness	158
5.6	Summary and Discussion	161
	References	161
6	Drift-Flux Model	163
6.1	Introduction	163
6.2	Void Propagation Equation	165
6.3	Applications of Void Propagation Equation	167
6.3.1	Level Swell	167
6.3.2	Drainage	170
6.3.3	Propagation of Material Shocks	172

6.4	Dynamic Drift-Flux Model	173
6.4.1	Mixture Momentum Equation	173
6.4.2	Integral Momentum Equation	176
6.5	Delay Drift-Flux Model	179
6.6	Flow Excursion	184
6.6.1	Homogeneous Equilibrium Model	184
6.6.2	Drift-Flux Model	186
6.7	Density Wave Instability	187
6.7.1	Homogeneous Equilibrium Model	187
6.7.2	Transfer Function	189
6.7.3	Drift-Flux Model	192
6.8	Summary and Discussion	192
	References	192
7	Drift-Flux Model Nonlinear Dynamics and Chaos	195
7.1	Introduction	195
7.2	Nonlinear Mapping of the Boiling Channel Dynamics	197
7.3	Model of a Boiling Channel with Moving Nodes	202
7.4	Dynamics of a Boiling Channel with an Adiabatic Riser	209
7.4.1	Summary of MNM Equations for the Channel-Riser System	211
7.4.2	Low Power Oscillations at Low Fr Numbers in a Heated Channel with Adiabatic Riser	213
7.4.3	Experimental Validation of Quasi-periodic Oscillations	218
7.5	Summary and Discussion	221
	References	222
8	RELAP5 Two-Fluid Model	225
8.1	Introduction	225
8.2	Material Waves	226
8.2.1	RELAP5 Adiabatic Two-Fluid Model	226
8.2.2	Characteristics	228
8.2.3	Bernier's Experiment	230
8.3	Low Pass Filter Regularization of the TFM	233
8.3.1	Dispersion Analysis	234
8.3.2	Numerical Viscosity	236
8.3.3	Artificial Viscosity Model	240
8.3.4	Water Faucet Problem	242
8.4	Summary and Discussion	243
	References	244
9	Two-Fluid Model CFD	247
9.1	Introduction	247
9.2	Incompressible Multidimensional TFM	248
9.2.1	Model Equations	248
9.2.2	Interfacial Momentum Transfer	249

9.2.3	Drag Force	249
9.2.4	Lift Force	250
9.2.5	Wall Force	251
9.2.6	Laminar Pipe Flow	252
9.3	RANS Two-Fluid Model	253
9.3.1	Reynolds Stress Stabilization	253
9.3.2	Single-Phase $k-\epsilon$ Model	253
9.3.3	Two-Phase $k-\epsilon$ Model	256
9.3.4	Decay of Grid Generated Turbulence	257
9.3.5	Turbulent Pipe Flow	261
9.3.6	Turbulent Diffusion Force	265
9.3.7	Bubbly Jet	267
9.4	Near-Wall Two-Fluid Model	271
9.4.1	Wall Boundary Conditions	271
9.4.2	Two-Phase Logarithmic Law of the Wall of Marie et al. (1997)	271
9.4.3	Near-Wall Averaging	273
9.4.4	Laminar Pipe Flow Revisited	275
9.4.5	Turbulent Bubbly Boundary Layer	276
9.4.6	Turbulent Pipe Flow Revisited	278
9.5	URANS Two-Fluid Model	280
9.5.1	Stability	280
9.5.2	Constitutive Relations	281
9.5.3	Plane Bubble Plume	281
9.6	Summary and Discussion	287
	References	288
	Appendix A: One-Dimensional Two-Fluid Model	293
	Appendix B: Mathematical Background	299
	References	347
	Index	351

Two-Fluid Model Stability, Simulation and Chaos

Bertodano, M.L. de; Fullmer, W.; Clausse, A.; Ransom, V.

2017, XX, 358 p. 74 illus., 60 illus. in color., Hardcover

ISBN: 978-3-319-44967-8
