Part I Preliminaries

1	Introduction	3
1.1	Turbulence Regimes	4
1.2	Global Intermittency	5
1.3	Approaches to Studying the Stable Boundary Layer	7
1.4	Research Proposition	8
	References	9
2	Problem Formulation and Tools	13
2.1	The Governing Equations	13
2.2	Non-dimensionalization and Parameter Space	17
2.2.1	The Neutrally Stratified Regime	17
2.2.2	Uniqueness of the Solution	17
2.2.3	Imposing Stratification: Initial and Boundary Conditions	18
2.2.4	Parameter Space of the Non-dimensionalized Problem	20
2.3	Analysis Tools	21
2.3.1	Conditional Sampling	22
2.3.2	Temporally Resolved Probes	22
2.4	Summary	23
	References	23

Part II Numerics

3	Discretization	29
3.1	The Pressure Problem	29
3.2	Spatial Discretization	30
3.3	Time Stepping Schemes	31
3.3.1	Explicit Runge–Kutta Schemes	32
3.3.2	Semi-implicit Runge–Kutta Schemes	33

3.3.3	Multi-level Schemes and Other Methods.	36
3.3.4	Choice of a Method	37
3.4	Stability of the Sirk3 Scheme.	38
3.5	Implementation of the Sirk3 Scheme	40
3.5.1	Rotation of the Grid: Equations Solved by the DNS.	40
3.5.2	Buffer Zone.	41
3.5.3	Discretization in the Interior of the Domain	41
3.5.4	Dirichlet Boundary Conditions for the Semi-implicit Solver	43
3.5.5	Integration of a Scalar Variable.	44
3.5.6	Description of the Implementation	44
	References.	46
4	Overlapping Communication and Computation	49
4.1	Motivation—A Rough Estimate of the Computational Demand	50
4.1.1	Memory Demand	50
4.1.2	Computational Demand.	51
4.1.3	The Link Between Spatial Discretization and Communication.	52
4.2	Approach and Implementation	53
4.2.1	Why Overlap Communication and Computation?	53
4.2.2	Design of the NB3DFFT Library.	55
4.2.3	Re-Organization of the Algorithm.	55
4.3	Performance Measurements	56
4.3.1	Performance Metrics: Strong and Weak Scaling	58
4.3.2	Performance on the Supercomputer juqueen	59
	References.	62
5	A Test Bed for the Numerical Tool	63
5.1	Behavior of the Semi-implicit Scheme When Solving a Non-linear ODE.	63
5.2	Analytical Solution of Ekman Flow	65
5.2.1	The Stationary Laminar Solution.	65
5.2.2	Temporally Evolving Solution.	66
5.2.3	Convergence of the Errors	67
5.3	Two-Dimensional Taylor–Green Vortex	68
5.4	Three-Dimensional Turbulent Ekman Layer	70
	References.	71
 Part III Physics		
6	The Neutrally Stratified Ekman Layer	75
6.1	Conventional Statistics	76
6.1.1	Global Measures	76
6.1.2	Vertical Profiles.	77

6.2	Local Versus Ensemble Statistics	79
6.2.1	Data Analysis Procedure	80
6.2.2	Convergence of local estimates to the ensemble mean . . .	81
6.3	External Intermittency and Its Impact in the Surface Layer	83
6.3.1	Definition of external intermittency	83
6.3.2	A Vorticity Source in the Outer Layer	84
6.3.3	A Modified Logarithmic Law for the Mean Velocity	86
6.4	Flow Synopsis	91
6.5	Summary	93
	References.	94
7	Turbulence Regimes and Stability	97
7.1	Initial Conditions and Time Scales Under Stable Stratification	98
7.1.1	Initial Adaptation	100
7.1.2	Recovery After Initial Turbulence-Breakdown	101
7.1.3	Inertial Oscillation.	102
7.1.4	Buoyancy Oscillation	105
7.2	Classification of the Stability Regimes	108
7.2.1	Weak Stability.	109
7.2.2	Intermediate Stability	109
7.2.3	Very Strong Stability	111
7.3	Summary	112
	References.	114
8	Flow Organization and Global Intermittency Under Strong Stratification	117
8.1	Scaling of the Very-Large-Scale Structures.	119
8.2	Critical Stability	125
8.3	Quantification of Intermittency	128
8.3.1	Definition of Flow Filters	129
8.3.2	Detection of Global Intermittency	130
8.3.3	Wave-Like Motions.	133
8.4	Conditional Statistics	135
8.4.1	Concentration of Dissipative Flow Structures	135
8.4.2	Structural Interpretation.	136
8.5	Summary	138
	References.	139
Part IV Concluding Remarks		
9	Implications for the Study of the Atmospheric Boundary Layer	143
9.1	The Rough-Wall Problem and the Wall Unit	143
9.2	Convergence of a Flux Measurement Based on a Single-Point Probe	145

9.3	Relation to Monin–Obukhov Similarity Theory	145
9.4	Global Intermittency and Turbulence Collapse	146
	References.	149
10	Résumé.	151
	Epilogue.	155
	Appendix A: Analytical Study of the Inertial Oscillation.	157
	Appendix B: High-Frequency Oscillation Under Stable	
	Stratification	163
	Index	169

Analyses of Turbulence in the Neutrally and Stably
Stratified Planetary Boundary Layer
