

Contents

1	Mathematical Foundation of Quantum System	1
1.1	System, State, and Measurement	1
1.2	Composite System	4
1.3	Many-Body System	7
1.4	Guide for Related Literatures	8
2	Quantum Channel, and Information Quantity, and Their Mathematical Structure	9
2.1	Channel in Quantum System	9
2.2	State Reduction Due to Measurement	13
2.3	Convex Set and Inequalities	14
2.3.1	Convex Set and Convex Function	14
2.3.2	Majorization and Schur Convex Function	15
2.3.3	Probability Distribution and Inequalities	16
2.3.4	Hölder Inequality and Its Related Topics	17
2.3.5	Extension to Matrix Version	18
2.4	Information Quantities on Quantum System	20
2.4.1	Information Quantities of Information Source	20
2.4.2	Information Measures for Two Information Sources	22
2.4.3	Correlation Between Two Systems	25
2.4.4	Quantum Channel and Information Quantities	27
2.5	Qubit System	29
2.6	Information Processing Inequalities	30
2.7	Relative Entropy and Rényi Entropy	31
2.8	Rényi Mutual Information	37
3	Entanglement and Its Quantification	39
3.1	Locality Conditions	39
3.2	Quantum Teleportation	41

3.3	Examples of Entangled States	42
3.3.1	Discrete Heisenberg Representation Revisited	42
3.3.2	Stabilizer State	46
3.3.3	Graph State	48
3.4	Characterization on Bipartite System	50
3.5	Quantification of Entanglement I: Geometrical Method	51
3.5.1	Entanglement Monotone	51
3.5.2	Analysis with Examples	55
3.5.3	Extension Based on PPT States	61
3.6	Quantification of Entanglement II: Operational Method	62
3.6.1	Bipartite System	62
3.6.2	Multipartite System	64
3.7	Quantification of Entanglement III: Convex Decomposition Method	67
4	Group Covariance and Optimal Information Processing	69
4.1	Covariant State Family and Optimal Measurement	69
4.1.1	Covariant State Family and Covariant Measurement	69
4.1.2	Characterization of Covariant POVM	73
4.1.3	Optimization of Covariant Measurement	75
4.2	Generation of Approximating State	80
4.2.1	General Theory for Generation of Approximating State	80
4.2.2	General Theory for Generation of Approximating State with Puseudo Fidelity	82
4.2.3	Generation of Approximating State for Pure States	85
4.2.4	Generation of Approximating State for Mixed States: Puseudo Fidelity	87
4.2.5	Generation of Approximating State for Mixed States: Fidelity	89
4.2.6	Generation of Approximating State: Relative Entropy	91
4.3	Identification of Group Action	92
4.3.1	Formulation of Problem	92
4.3.2	Case of Commutative Group	94
4.3.3	Role of Inverse Fourier Transform for Non-commutative Case	96
4.3.4	Finite Group	97
4.3.5	General Compact Lie Group	102
4.3.6	Energy Constraint [*]	106
4.3.7	Proofs of Theorem 4.13 and Lemma 4.2 [*]	109
4.4	Channel and Symmetry	111
4.5	Approximate State Cloning	114

5	Quantum Error Correction and Its Application	121
5.1	Error Correction in Classical System Based on Algebraic Structure	121
5.1.1	Formulation of Problem	121
5.1.2	Upper Bound of Decoding Error Probability	123
5.1.3	Evaluation Under Ensemble	125
5.1.4	Construction of Code Ensemble	128
5.1.5	Asymptotic Theory	129
5.1.6	Error Correction with Secrecy	130
5.2	General Theory for Quantum Error Correction	132
5.3	Code Based on Discrete Heisenberg Representation	133
5.3.1	Stabilizer Code	133
5.3.2	CSS (Calderbank-Shor-Smolin) Code	135
5.3.3	Asymptotic Theory	138
5.3.4	Physical Implementation	139
5.4	Clifford Code*	141
5.5	Application to Entanglement Distillation and General Channel	146
5.6	Quantum Secure Communication	149
5.6.1	Case Without Privacy Amplification	149
5.6.2	Case with Privacy Amplification	154
5.7	Application to Quantum Cryptography (Quantum Key Distribution)	158
6	Universal Information Processing	163
6.1	Method of Types	163
6.2	Asymptotic Theory for Schur Duality	167
6.2.1	Asymptotic Behavior of Schur Duality	167
6.2.2	Universal Eigenvalue Estimation	169
6.2.3	Testing of Density Matrix	173
6.2.4	Dimension of Irreducible Space for Permutation Group	176
6.3	Estimation of State in Qubit System	178
6.4	Universal Approximation of Quantum State	179
6.5	Entanglement Concentration	184
6.5.1	Case with Known Basis of Reduced Density	184
6.5.2	Case with Unknown Basis of Reduced Density	186
6.6	Quantum Data Compression	188
6.6.1	Fixed-Length Data Compression	188
6.6.2	Variable-Length Data Compression I: Determined Compression Rate	190
6.6.3	Prefix Code and Kraft Inequality	192
6.6.4	Variable-Length Data Compression II: Undetermined Compression Rate	194

6.7	Classical-Quantum Channel Coding	197
6.7.1	Formulation.	197
6.7.2	Construction of Code	198
6.7.3	Evaluation of Performance	200
6.7.4	Proof of Lemma 6.13	203
Appendix A: Solutions of Exercises		205
