

Contents

1	Modeling of Fractal Elements and Processes	1
1.1	Concept of Fractals, Self-Similarity, and Scaling	1
1.2	Dimension Types	3
1.3	Regular Fractals	5
1.4	Irregular Random Fractals	8
1.5	Multifractals	9
1.6	Fractal Signals	10
1.7	Physical Meaning of Hurst Parameter	13
1.8	Relation Between Fractality and Spectrum Response	15
1.9	Examples of Signal Analysis	16
2	Fractal Calculus Fundamentals	21
2.1	Preliminaries	21
2.2	Properties of Fractional-Order Integrals and Derivatives	22
2.2.1	Riemann-Liouville Fractional-Order Integral and Derivative	22
2.2.2	Grunwald-Letnikov Fractional-Order Derivative and Integral	23
2.2.3	Properties of Fractional-Order Derivatives	25
2.3	Laplace Transform of Fractional-Order Operators	26
2.3.1	Fundamentals of Laplace Transform	26
2.3.2	Laplace Transform of Fractional-Order Integrals	27
2.3.3	Laplace Transform of Fractional-Order Derivatives	28
2.4	Fourier Transform of Fractional-Order Operators	28
2.4.1	Fundamentals of Fourier Transform	28
2.4.2	Fourier Transform of Fractional-Order Integrals	29
2.4.3	Fourier Transform of Fractional-Order Derivatives	30

2.5	Dynamics of Fractional-Order Transfer Functions	31
2.5.1	Fractional-Order Transfer Functions	31
2.5.2	Mittag-Leffler Function	31
2.5.3	Solving Fractional-Order Differential Equation (FoDEQ) Using Laplace Transform	32
2.6	Fractional-Order Electrical and Electronic Systems	34
2.6.1	Semi-infinite Transmission Line	34
2.6.2	Electrochemistry	36
2.6.3	Rough Surface Impedance	37
3	Fractal Elements	41
3.1	Fractal Impedances and Fractal Element	41
3.2	Implementation of Fractal Impedances Using Electrochemical Converters	45
3.2.1	Liquid Electrolyte Electrochemical Signal Converters	46
3.2.2	Solid Electrolyte Electrochemical Signal Converters	47
3.2.3	Fractal Element Fractor TM	48
3.3	Implementation of Fractal Impedances (Immittances) Using <i>RC</i> Circuits with Lumped Parameters	49
3.3.1	Preliminaries	49
3.3.2	Properties of Input <i>RC</i> -Transfer Functions	50
3.3.3	Circuit Realization Using Foster Forms	53
3.3.4	Circuit Realization Using Cauer Forms	55
3.3.5	Rational Approximation of Fractal-Order Impedances	64
3.3.6	Realization of Fractional-Order Inductors (FoIs)	78
3.3.7	Realization of Fractional-Order Capacitors (FoC)	82
3.4	Realization of Fractal Impedances Using <i>RC</i> Circuits with Distributed Parameters	83
3.5	Fabrication of Fractal Impedances Using Nanostructured Materials	86
3.6	Comparison of Fractal Element Characteristics Using Different Fabrication Technology	89
4	Design and Implementation of Thin <i>RC</i>-EDP Films	93
4.1	Classification of Static Heterogeneous Characteristics of <i>RC</i> -EDP Films	93
4.2	<i>RC</i> -EDP Film Design of Multilayer Structure	94
4.3	Design Development of <i>RC</i> -EDP Films by Changing Layers Geometry	96
4.4	Design Development of <i>RC</i> -EDP Film Using Layers Overlapping	101

4.5	Design Development of <i>RC</i> -EDP Films via Contacts Combination	103
4.6	Design Development of <i>RC</i> -EDP Films via Layers Cutouts	105
5	Schematic Realization of <i>RC</i>-EDP Circuits	109
5.1	Preliminaries and Background	109
5.2	Characteristics of One-Dimensional (OD) Homogeneous and Heterogeneous <i>R-C-O</i> EDP Structure	109
5.3	Connection Circuits of OD <i>R-C-NR</i> -Structured EDP Circuits	112
5.4	Connection of an <i>0-C-R-NC-0</i> -Structured EDP Circuits	117
5.5	Effect of Number of <i>RC</i> -EDP Terminals on Circuits Connections	117
5.6	Compound Structure of <i>RC</i> -EDP Circuits	120
6	Design and Fabrication of <i>RC</i>-EDP Circuits	127
6.1	Preliminaries and Background	127
6.2	Thin-Film <i>RC</i> -EDP Fabrication Methods	127
6.2.1	Cathode Sputtering Process	129
6.2.2	Ion-Plasma Sputtering Process	130
6.2.3	Oxidation of the Conducting Surface or Resistive Material	130
6.2.4	Vapor Phase (VP) Films Deposition	131
6.2.5	Monosilane Pyrolytic Decomposition Process	131
6.2.6	High-Melting Metal Films Deposition	132
6.2.7	Polycrystalline Silicon Films Deposition	132
6.2.8	Photolithography	132
6.3	Performance Analysis and Parameter Tuning of <i>RC</i> -EDP Circuits	137
7	Nonlinear Structure of <i>RC</i>-EDP Circuits	141
7.1	Presuppositions	141
7.2	External Field Effect on the Fabrication of <i>RC</i> -EDP Resistive Parameters	142
7.2.1	Thermoresistive Effect	142
7.2.2	Magnetoresistive Effect	144
7.2.3	Photoresistive Effect	145
7.2.4	Tensoresistive Effect	148
7.3	External Field Effect on the Fabrication of <i>RC</i> -EDP Dielectric Layer Materials	149
7.3.1	Pyroelectrical Effect	150
7.4	Nonlinear <i>RC</i> -EDP Circuits	153

8	Applications of Fractal Elements	157
8.1	Application of Fractal Elements and Devices in Signal Processing	158
8.2	Application of the RC -EDP to Model Fractal Processes and Objects	160
8.2.1	Presuppositions	160
8.2.2	Alumina Electrolytic Capacitor Model	161
8.2.3	Lithium-Ion Polymeric Battery Model	162
8.2.4	Modeling of Composite Heterogeneous Materials	163
8.3	Application of RC -EDP Devices in Fractional-Order Dynamics and Control	166
8.3.1	Fractional-Order PI^2D^δ Controller Design	166
8.3.2	Fractional-Order Differentiators and Integrators (Fractional Operators)	173
8.4	Promising Application Areas of the RC -EDP Devices	175
8.5	The Universal Simulation Environment with Distributed $RLCG$ Parameter Method	176
9	Modeling of RC-EDP Circuits	181
9.1	General Model of $R1$ - $C1$ - $R2$ - $C2$ - $R3$ -Layered RC -EDP Devices	181
9.2	Classification of $R1$ - C - $R2$ -Layered RC -EDP Based on Potential Distribution in Resistive Layers	186
10	Calculation of One-Dimensional RC-EDP Primary Parameters	191
10.1	Preliminaries	191
10.2	Y -Parameter Calculation of $ODHom$ R - C -0-Layered EDP Devices	192
10.3	Y -Parameter Calculation of $ODHet$ R - C -0-Layered EDP Devices	194
10.4	Y -Parameter Calculation of $ODHom$ $R1$ - $G1$ - $C1$ - R - $C2$ - $G2$ - $R2$ -Layered EDP Devices	198
10.4.1	Electrical Models of One-Dimensional Systems with Distributed Parameters	198
10.4.2	Modeling of $ODHom$ $R1$ - $G1$ - $C1$ - R - $C2$ - $G2$ - $R2$ -Layered EDP Devices	200
10.4.3	Derivation of Analytical Expressions of the Y -Parameters	204
11	Numerical Methods of R-C-0-EDP Fractal Elements	211
11.1	Preliminaries	211
11.2	Finite Distributed Element Method	214
11.3	Application of Finite Distributed Element Method to Calculate the $ODHet$ RC -EDP Primary Parameters	218

11.3.1	FDEM-Based Calculation of the Y -Parameters of the ODHet RC -EDP of Heterogeneous Width	218
11.3.2	Y -Parameter Calculation of the Complementary ODHet RC -EDP Devices	219
11.3.3	Y -Parameter Calculation of the Parametric ODHet RC -EDP Devices	221
11.4	Application of Finite Distributed Element Method to Calculate the TDHom RC -EDP Y -Parameters	222
12	Primary Parameter Calculation of the RC-EDP Using Generalized RCG-EDP Devices	227
12.1	Generalized Finite Distributed Element Method	227
12.1.1	Preliminaries	227
12.1.2	The GFDEM Algorithm	228
12.2	Classification and Synthesis of FDE Using the GFDEM Elements	232
12.2.1	Classification of FDE Using the GFDEM Elements	232
12.2.2	Generation of FDE Elements Based on Transformation of GFDEM	234
12.3	Y -Parameter Calculations of One-Dimensional Heterogeneous Structure of RC -EDP Devices Using GFDEM	236
12.3.1	Preliminaries	236
12.3.2	ODSHet RC -EDP Mathematical Model	239
12.3.3	Y -Parameter Calculation Algorithm of Six-Terminal ODSHet RC -EDP Devices	243
