

Contents

1	Introduction	1
1.1	The Basic Function of the Wheel/rail System	1
1.2	Significance of Dynamics on the Operation of Rail Vehicles	2
1.3	On the History of Research in the Field of Railway Technology Since 1800	4
1.3.1	1800–1945	4
1.3.2	A New Start After 1945: Japan and France	7
1.3.3	Research and Development Aimed at Overcoming the “Boundaries of the Wheel/rail System”	10
1.4	Railway Industry in Europe	11
1.5	Overview of This Book	12
1.5.1	Classification	12
1.5.2	Vertical and Lateral Vibrations	13
1.5.3	Curving Behavior	13
1.5.4	Frequency- and Time-Domain Calculations	13
	References	14
2	Modeling of Vehicle, Track, and Excitation	17
2.1	Prior Considerations and Coordinate Systems	17
2.2	Vehicle Modeling	18
2.2.1	Bogie Frame Design, Primary Suspension, and Bogie Guidance	18
2.2.2	Mechanical Model of the Vehicle. Connecting Elements	23
2.2.3	Elastic Carbodies	23
2.3	Modeling of Track and Excitation	26
2.3.1	Track Modeling	26
2.3.2	Modeling of the Excitation	28
	References	31

3	Modeling of Wheel/Rail Contact	33
3.1	Profile Geometry	33
3.2	Contact Kinematics Between Wheel and Rail	36
3.2.1	Contact Kinematics with Conical and Circular Profiles	37
3.2.2	Contact Kinematics for Arbitrary Profiles	43
3.2.3	On the Determination of Equivalent Contact Parameters by Means of Quasilinearization	45
3.2.4	Conversion into Equivalent Circular Profiles	47
3.2.5	Linearized Contact Kinematics with Track Irregularities	48
3.2.6	Creepage Calculation	50
3.3	Normal Contact Mechanics	51
3.3.1	Overview of the Calculation of Contact Point Stresses	51
3.3.2	Assumptions of the Normal Contact Problem	52
3.3.3	Nonelliptic Contact Patches	53
3.3.4	Hertzian Treatment of the Normal Contact Problem	53
3.3.5	Spherical and Point Contact	56
3.3.6	Ellipsoidal Contact	57
3.3.7	Contact of Rollers, Line Contact	58
3.3.8	Linearized Replacement Model	59
3.4	Tangential Contact Mechanics	60
3.4.1	Introduction to the Tangential Contact Problem	60
3.4.2	Analytical Solution for Rolling Contact (Line Contact)	63
3.4.3	Kalker's Theory of Rolling Contact for Ellipsoidal Contact	66
3.4.4	Approximate Solutions According to Vermeulen–Johnson and Shen–Hedrick–Elkins	67
3.4.5	Simplified Theory of Rolling Contact [54]	71
3.4.6	Adaptation of the Theory to Reality	76
	References	77
4	Vertical Dynamics, Equations of Motion, and Free Vibrations	81
4.1	Notation and Assumptions	81
4.2	Equations of Motion with the Principle of Linear and Angular Momentum	82
4.2.1	Displacement Degrees of Freedom for a Two-Axle Vehicle	83
4.2.2	Constraints	83
4.2.3	Forces in the Spring and Damper Elements	85
4.2.4	Free-Body Diagrams of the Masses	87

4.2.5	Principle of Linear and Angular Momentum for the Formulation of the Equation System	88
4.2.6	Elimination of the Constrained Forces. Final System of Equations.	89
4.3	Principle of Virtual Displacements for Rigid-Body Systems. . . .	91
4.3.1	Initial Remark	91
4.3.2	Formulation of the Principle of Virtual Displacements	92
4.3.3	Inclusion of Geometric Constraints in the Principle of Virtual Displacement Exemplified on a Two-Axle Vehicle	94
4.4	Formalized Derivation of the Equations of Motion and the Principle of Virtual Displacements.	95
4.4.1	Displacement Vector with the Degrees of Freedom of the Free System	95
4.4.2	Relation Between Spring Elongation and System Displacement.	96
4.4.3	Spring Forces and the Formulation of the Virtual Strain Energy.	96
4.4.4	Mass Matrix and Formulation of the Virtual Work of the Inertia Forces	97
4.4.5	External and Constraint Forces	97
4.4.6	Equations of Motion for the Free System. Introduction of Constraints	98
4.5	Equations of Motion for Elastic Car Bodies	99
4.6	Solution for Free Vibrations	101
4.7	Exercises for This Chapter	105
4.7.1	Constraint Forces when Constraints are Met	105
4.7.2	Validity of the Rolling Condition	105
	References.	105
5	Forced Vertical Vibrations for Excitation with Harmonic and Periodic Track Irregularities (Frequency Domain Solution).	107
5.1	Complex Syntax	108
5.2	Vertical Vibrations on a Track with Cosine-Shaped Track Irregularity (Cosine Track)	111
5.2.1	Track Irregularities and Base-Point Excitations	111
5.2.2	Solution for the Vertical Motion	112
5.2.3	Interpretation of the Solution for Different Suspensions Between Wheelset and Carbody	116
5.3	Vehicle on a General Periodic Track	119
5.4	Solution for a Vehicle with Elastic Carbody Modes.	123

5.5	Exercises for This Chapter	124
5.5.1	Two-Axle Vehicle on Cosine Track	124
5.5.2	Two-Axle Vehicle on Generally Periodic Track	125
	References.	125
6	Random Vibrations due to Stochastic Track Irregularities	127
6.1	Characterization of an Irregular Track with Help of Root Mean Square Value and Power Spectrum	127
6.2	Determination of Vehicle Response for Stochastic Track Excitation	130
6.3	Power Spectra of Track Irregularities	133
6.3.1	How to Derive Power Spectra of Track Irregularities	133
6.3.2	Power Spectra for the DB Network.	135
6.4	Supplementary Comments Regarding the Relationship Between Measured Spectra of Spatial Angular Frequencies and Spectra of Angular Frequencies as Function of Time.	139
6.5	Interpretation of Response Spectrum.	139
	References.	140
7	Human Perception of Vibrations - Ride Comfort	141
7.1	Wertungsziffer According to Sperling	142
7.1.1	Periodic Vibrations	145
7.1.2	Random Vibrations	147
7.2	ISO 2631	148
7.3	CEN Standard EN 12299	151
7.3.1	Simplified Criterion for Mean Comfort: N_{MV}	151
7.3.2	Comfort on Curve Transitions: P_{CT}	153
7.3.3	Comfort on Discrete Events: P_{DE}	153
7.4	Final Remarks.	155
7.4.1	Measure or Simulate	155
7.4.2	Ride Comfort as System Property	156
7.4.3	Duration of Exposure of Vibration	156
7.5	Exercises for This Chapter	156
7.5.1	Calculation of Wz-Values According to Sperling	156
	References.	157
8	Introduction to Lateral Dynamics of Railway Vehicles	159
8.1	Preliminary Remark	159
8.2	Hunting and Klingel Equation	162
8.3	Assumptions for Derivation of the Klingel Equation	165
8.4	Determination of Equivalent Conicity with Eq. (8.13)	167
8.4.1	Final Remark to This Chapter.	168
	References.	168

9	Derivation of Equations of Motion for Lateral Dynamics	169
9.1	Principle of Virtual Displacements for a Suspended Wheelset with All Degrees of Freedom	169
9.1.1	Evaluated System and Acting Forces.	169
9.1.2	Formulation of Principle of Virtual Displacements	171
9.1.3	Determination of the Virtual Displacements	172
9.1.4	Equilibrium Conditions in the x -Direction and Around the y -Axis	174
9.1.5	Equilibrium Conditions in the y -Direction and Around the z -Axis	175
9.2	Exercises for This Chapter	176
9.2.1	Interpretation of Creep Force Terms in Eq. (9.13).	176
9.2.2	Rolling Resistance Due to Spin Creepage	177
9.2.3	Equations of Motions for Forced Lateral Vibrations	177
9.2.4	Rolling Resistance in the Simplified Theory	177
9.2.5	Equations of Motion of a Suspended Wheelset with Numbers	177
9.2.6	Creep Forces Under the Assumption of a Reference State with Creep Forces.	177
	References.	178
10	Lateral Eigenbehavior and Stability of a Wheelset on Straight Track	179
10.1	Determination of Eigenvalues and Eigenvectors	179
10.2	Root Loci Curves	181
10.3	Approximate Solution for Low Speeds.	183
10.4	Stability Investigation with Hurwitz Criterion.	186
10.5	Critical Speed of a Wheelset.	188
10.6	Interpretation of Stability Criteria of a Single Wheelset	189
10.7	Exercises for This Chapter	193
10.7.1	Characteristic Equation	193
10.7.2	Transformation of Wheelset Equations of Motion	194
10.7.3	Graphical Illustration of the Root Loci Curves of a Suspended Wheelset and Determination of the Critical Speed	194
10.7.4	Independently Rotating Wheels.	194
	Reference	194
11	Lateral Eigenbehaviour and Stability of Bogies	195
11.1	Numerical Calculation of Eigenvalues and Critical Speed	195
11.2	Analytic Approximations for Bogies.	201
11.2.1	Coordinate Transformation to Introduce Generalized Degrees of Freedom.	203
11.2.2	Bogie with Infinitely High Bending and Shear Stiffness.	211

11.2.3	Realization of Infinitely High Bending Stiffness or Shear Stiffness.	215
11.2.4	Bogies with Infinite Shear Stiffness.	216
11.2.5	Bogies with Infinite Bending Stiffness.	219
11.2.6	Bogies with Finite Bending and Shear Stiffness	220
11.3	Exercises for This Chapter	222
11.3.1	Equations of Motion of a Bogie	222
11.3.2	Equations of Motion of a Freely Rolling Wheelset at Low Speed	223
11.3.3	Equations for Bending and Shear Stiffness	223
	References.	223
12	Lateral Eigenbehavior and Stability of Bogie Vehicles.	225
12.1	Stability of a Train with Two Vehicles.	225
12.2	General Conclusions Regarding the Stability of a Bogie Vehicle According to Matsudaira [4]	228
12.2.1	Theory and Simulation of Bogie Vehicle Hunting.	229
12.2.2	Bogie Hunting.	232
12.2.3	Influence of Friction Yaw Damping on Bogie Hunting (Nonlinear Stability Investigation)	233
12.3	Suggestions for Further Work for This Chapter	235
12.3.1	Influence of Bending and Shear Stiffness on the Stability of Bogie Vehicles.	235
12.3.2	Stability of a Vehicle with Independently Rotating Wheels	235
12.3.3	Friction and Viscous Yaw Damping	235
	References.	235
13	Introduction to Non-linear Stability Investigations.	237
13.1	Preamble.	237
13.2	Nonlinear Critical Speed.	238
13.3	Fourier Decomposition of Nonlinear Limit Cycle Motions: The Method of Urabe and Reiter	240
13.4	Simplified Investigation of Nonlinear Stability with the Method of Quasilinearization	243
13.5	Limits of Fourier Decomposition	245
13.6	Nonlinear Stability Investigations in the Time Domain.	245
13.7	Ideas for Further Study in this Chapter.	246
13.7.1	Stability Investigation for the Boedecker Vehicle	246
	References.	246
14	Quasistatic Curving Behavior.	249
14.1	Historical Introduction	249
14.2	General Remarks	250
14.3	A Single Wheelset in a Curve	251
14.3.1	Free Wheelset in a Curve (Kinematic Curving).	251

14.4	Wheelset Guided in Track Following Frame	252
14.5	Curving of Bogies and Entire Vehicles.	259
14.5.1	Curving According to Uebelacker and Heumann.	260
14.5.2	Curving of Bogies with Suspension.	264
14.6	Wear Calculation in the Wheel–Rail Contact	266
14.7	Exercises for This Chapter	269
14.7.1	Directions of Creep Forces for Different Wheelset Positions	269
14.7.2	Deviation of Angle of Attack or Lateral Displacement of Wheelsets	270
14.7.3	Curving of Single Wheelset.	270
	References.	270
15	Determination of Load Collectives for Vehicle Components	273
15.1	Introduction	273
15.2	General Procedure	274
15.3	Stress Calculation in Components.	275
15.3.1	Finite Element Calculation in Each Time Step	276
15.3.2	Stress Calculation with the Help of Transformation Matrices.	276
15.4	Determination of Load Collectives	279
15.4.1	Determination of Sustainable Stresses	279
15.4.2	Cycle Counting Methods to Determine Load Collectives.	282
15.4.3	Conversion from a Two-Parameter to a One Parameter Collective	287
15.4.4	Superposition to Total Load Collective	289
15.5	Damage Accumulation: Proof of Strength.	290
15.5.1	Damage Accumulation Hypotheses	290
15.5.2	Concepts for Variable-Amplitude Fatigue Strength Proof for Rail Vehicles	292
15.6	Exercises for This Chapter	293
15.6.1	Transformation Matrix Between Degrees of Freedom in a Multibody Simulation Model and Stresses in the Bogie Frame	293
15.6.2	Determination of Collective of Spring Forces with Spectral Analysis.	293
	References.	293
16	Appendix	297
16.1	List of Symbols	297
16.2	Coordinate Systems	302

16.3	Fundamentals of Contact Mechanics.	304
16.3.1	Hertz Contact Mechanics.	304
16.3.2	Contact Equation.	306
16.3.3	Basic Equations for the Tangential Contact Problem According to Carter.	308
16.4	Function Φ for the Vermeulen–Johnson Solution.	311
16.5	Basic Equations of the Simplified Theory of Rolling Contact.	312
16.6	Stability Criteria of Characteristic Equations with Hurwitz Criterion.	313
16.7	Critical Speed of Single Wheelset Taking Nondiagonal Elements of Creepage Damping Matrix into Account.	314
