1	Input-Output Formalism for Few-Photon Transport	1
	Shanshan Xu and Shanhui Fan	
1.1	Introduction	1
1.2	Hamiltonian and Input-Output Formalism	2
1.3	Quantum Causality Relation	5
1.4	Connection to Scattering Theory	8
1.5	Single-Photon Transport	10
1.6	Two-Photon Transport	12
1.7	Example: A Waveguide Coupled to a Kerr-Nonlinear Cavity	14
1.8	Wavefunction Approach	16
1.9	Conclusion	19
	Appendix	20
	References	22
2	Quadrature-Squeezed Light from Emitters in Optical Nanostructures	25
	Diego Martín-Cano, Harald R. Haakh and Mario Agio	
2.1	Introduction	25
2.1.1	Quadrature-Squeezed Light	27
2.1.2	Detection Schemes	27
2.1.3	Squeezed Light sources	28
2.2	Theoretical Description	30
2.2.1	Macroscopic Quantum Electrodynamics	30
2.2.2	The Optical Bloch Equations	31
2.2.3	Squeezed Resonance Fluorescence	32
2.3	Quadrature Squeezing Assisted by Nanostructures	33
2.3.1	A Single Emitter Coupled to a Nanostructure	33
2.3.2	Cooperative Quadrature Squeezing	40
2.4	Conclusions and Outlook	44
	References	45

3	Coupling of Quantum Emitters to Plasmonic Nanoguides	47
	Shailesh Kumar and Sergey I. Bozhevolnyi	
3.1	Introduction	47
3.2	Theory of Coupling an Emitter to a Plasmonic Waveguide . . .	48
3.2.1	Modes in Plasmonic Waveguides	49
3.2.2	Theory of Coupling	51
3.3	Experimental Demonstrations of Coupling a Quantum Emitter to Plasmonic Nanoguides	56
3.3.1	Quantum Emitters	56
3.3.2	Coupling of Quantum Emitters to Plasmonic Waveguides	60
3.4	Conclusion and Outlook	68
	References.	69
4	Controlled Interaction of Single Nitrogen Vacancy Centers with Surface Plasmons	73
	Esteban Bermúdez-Ureña, Michael Geiselmann and Romain Quidant	
4.1	Introduction	73
4.2	Scanning Probe Assembly.	74
4.2.1	Control of Emission Dynamics Through Plasmon Coupling	75
4.2.2	Coupling of NV Centers to Propagating Surface Plasmons	78
4.3	Optical Trapping as a Positioning Tool.	87
4.3.1	Experimental Platform to Optically Trap a Single NV Center	88
4.3.2	Surface Plasmon Based Trapping	89
4.4	Conclusions and Outlook	93
	References.	94
5	Hyperbolic Metamaterials for Single-Photon Sources and Nanolasers	97
	M.Y. Shalaginov, R. Chandrasekar, S. Bogdanov, Z. Wang, X. Meng, O.A. Makarova, A. Lagutchev, A.V. Kildishev, A. Boltasseva and V.M. Shalaev	
5.1	Introduction	98
5.2	Fundamentals of Hyperbolic Metamaterials	99
5.3	Enhancement of Single-Photon Emission from Color Centers in Diamond	100
5.3.1	Calculations of NV Emission Enhancement by HMM	103
5.3.2	Experimental Demonstration of HMM Enhanced Single-Photon Emission.	104
5.3.3	Increasing Collection Efficiency by Outcoupling High-k Waves to Free Space	106

5.4	Lasing Action with Nanorod Hyperbolic Metamaterials	108
5.4.1	Purcell Effect Calculations for Dye Molecules on Nanorod Metamaterials.	111
5.4.2	Experimental Demonstration of Lasing with Nanorod Metamaterials	113
5.5	Summary	115
	Appendix: Semi-analytical Calculations of the Purcell Factor and Normalized Collected Emission Power.	115
	References.	117
6	Strong Coupling Between Organic Molecules and Plasmonic Nanostructures.	121
	Robert J. Moerland, Tommi K. Hakala, Jani-Petri Martikainen, Heikki T. Rekola, Aaro I. Väkeväinen and Päivi Törmä	
6.1	Introduction	121
6.2	Theoretical Background	124
6.2.1	Classical Approach	124
6.2.2	Semi-Classical Approach.	126
6.2.3	Fully Quantum-Mechanical Approach	128
6.3	Coupling of Organic Molecules with Plasmonic Structures.	129
6.4	Dynamics of Strong Coupling.	131
6.4.1	Frequency Domain.	132
6.4.2	Time Domain.	133
6.5	Surface Lattice Resonances.	134
6.5.1	Empty Lattice Approximation	135
6.5.2	Lattice of Point Dipoles.	137
6.5.3	Band Gap Formation in SLR Dispersions	140
6.6	Strong Coupling in Nanoparticle Arrays.	141
6.6.1	Spectral Transmittance Experiments	142
6.6.2	Spatial Coherence of Strongly Coupled Hybrid Modes	145
6.7	Outlook.	147
	References.	148
7	Polariton Condensation in Organic Semiconductors.	151
	Konstantinos S. Daskalakis, Stefan A. Maier and Stéphane Kéna-Cohen	
7.1	Introduction	151
7.2	What Is a Condensate?	152
7.3	Planar Microcavity Structures	153
7.4	Polariton Relaxation	156
7.5	Condensate Formation	158
7.6	Condensate Coherence	160
7.7	Conclusions	162
	References.	163

8	Plasmon Particle Array Lasers	165
	Y. Hadad, A.H. Schokker, F. van Riggelen, A. Alù and A.F. Koenderink	
8.1	Introduction	166
8.2	Experiments on Plasmon Lattice Laser	167
	8.2.1 Samples and Experimental Methods	167
	8.2.2 Input-Output Curves, Thresholds and Fourier Space	169
8.3	Theory of Plasmon Lattices Coupled to Stratified Media	171
	8.3.1 Two-Dimensional Periodic Arrays, Folded Dispersion, and the “Nearly Free-Photon” Approximation	172
	8.3.2 Surface Lattice Resonances	173
	8.3.3 Semi-analytical Approach: Polarizability and Lattice Sums	174
	8.3.4 Theoretical Model—Results	178
	8.3.5 Stop Gap and Band Crossing	180
8.4	Open Questions for Periodic Plasmon Lasers	181
8.5	Scattering, Aperiodic and Finite Lasers	182
8.6	Conclusions	185
	Appendix A: 1D Green’s Function	185
	Appendix B: Ewald Summation	186
	References	188
9	Surface Plasmon Enhanced Schottky Detectors	191
	Pierre Berini	
9.1	Introduction	191
9.2	SPPs and Photodetection Mechanisms	192
9.3	Grating Detectors	196
9.4	Nanoparticle and Nanoantenna Detectors	199
9.5	Waveguide Detectors	202
9.6	Summary and Prospects	207
	References	208
10	Antenna-Coupled Tunnel Junctions	211
	Markus Parzefall, Palash Bharadwaj and Lukas Novotny	
10.1	Introduction	211
10.2	Theoretical Framework	213
	10.2.1 Historical Survey	213
	10.2.2 Photon Emission: A Two-Step Process	213
	10.2.3 Tunneling Rates	214
10.3	Coupling Tunnel Junctions to Free Space	220
	10.3.1 Macroscopic Solid State Tunnel Devices	220
	10.3.2 Scanning Tunneling Microscope	224
	10.3.3 Antenna-Coupled Tunnel Junctions	225
	10.3.4 Conclusion	230

10.4	Outlook	230
10.4.1	Ultrafast Photon/SPP Sources	230
10.4.2	LDOS and Impedance Matching Optimization	230
10.4.3	Beyond MIM Devices	232
10.4.4	Resonant Tunneling	232
10.4.5	Stimulated Emission	232
10.4.6	Beyond Visible Light Emission	233
10.5	Summary	233
	References	233
11	Spontaneous Emission in Nonlocal Metamaterials with Spatial Dispersion	237
	Brian Wells, Pavel Ginzburg, Viktor A. Podolskiy and Anatoly V. Zayats	
11.1	Introduction	238
11.2	Nonlocal Effective Medium Theory	240
11.2.1	Calculation of E_z and H_z	241
11.2.2	Calculation of E_r , H_r , E_ϕ , and H_ϕ	242
11.2.3	Applying the Boundary Conditions at $r=R$	244
11.2.4	Dispersion of the Longitudinal Mode	246
11.2.5	Solutions at Oblique Angles	249
11.2.6	Wave Profiles at Oblique Angles	252
11.2.7	Simplified Approach to Nonlocal Effective Medium Theory	253
11.2.8	Nonlocal Transfer Matrix Method	254
11.3	Dipole Emission in Nonlocal Metamaterials	258
11.3.1	Plane Wave Expansion of Green's Function in Homogeneous Material	261
11.3.2	Spontaneous Decay Rates Near Planar Interfaces	265
11.3.3	Emission in Lossless Metamaterials and Local Field Corrections	267
11.3.4	Effects of Finite Material Absorption	269
11.3.5	Non-Local Field Correction Approach	269
11.4	Experimental Results on Collective Purcell Enhancement	271
11.5	Conclusion	274
	References	274
