Part I Pericyclic Reactions

1	General Aspects of Pericyclic Reactions	3
1.1	Introduction	3
1.2	Molecular Orbitals and Their Symmetry Properties	4
1.3	Classification of Pericyclic Reactions	6
1.4	Concertedness of Pericyclic Reactions	9
1.5	Orbital Symmetry Property of Pericyclic Reactions	9
1.6	Further Reading	11
	References	11
2	Electrocyclic Reactions	13
2.1	Introduction	13
2.2	Orbital Symmetry Basis for Stereospecificity	14
2.3	The Orbital Correlation Diagrams of Reactants and Products	15
2.4	Applications of Neutral Conjugated Systems in Electrocyclic Reactions	19
2.5	Applications of Ionic Conjugated Systems in Electrocyclic Reactions	27
2.6	Problems	32
2.7	Further Reading	34
	References	34
3	Cycloaddition Reactions	37
3.1	Introduction	37
3.2	[2+2]-Cycloaddition Reactions	38
3.2.1	Overview of Thermal and Photochemical [2+2]-Cycloaddition Reactions	38
3.2.2	Applications of [2+2]-Cycloaddition Reactions	39
3.3	[4+2]-Cycloaddition Reactions	43
3.3.1	The <i>Diels–Alder Reactions</i>	44

3.4	Cycloaddition Reactions of More Than Six Electrons Systems: [4+4]-, [6+6]-, [6+4]-, [8+2]-, [12+2]-, and [14+2]-Cycloadditions	91
3.5	Cheletropic Reactions	95
3.5.1	Overview of Cheletropic Reactions	95
3.5.2	Applications of Cheletropic Reactions	96
3.6	Problems	99
3.7	Further Reading	102
	References	103
4	Sigmatropic Rearrangements	107
4.1	Introduction	107
4.2	Orbital Symmetry Basis for Allowed and Forbidden Sigmatropic Rearrangements and Their Stereochemistry	108
4.2.1	Orbital Symmetry Analysis of [1,3]-, [1,5]-, and [1,7]-Sigmatropic Shifts of Hydrogen and Alkyl Groups	108
4.2.2	Orbital Symmetry Analysis of [3,3]- and [2,3]-Sigmatropic Rearrangements	110
4.3	[1,3]-, [1,5]-, and [1,7]-Sigmatropic Hydrogen and Alkyl Shifts and Their Applications	112
4.3.1	[1,3]-Sigmatropic Hydrogen and Alkyl Shifts	112
4.3.2	[1,5]-Sigmatropic Hydrogen and Alkyl Shifts	113
4.3.3	[1,7]-Sigmatropic Hydrogen and Alkyl Shifts	118
4.4	[3,3]-Sigmatropic Rearrangements	119
4.4.1	The <i>Cope Rearrangements</i>	119
4.4.2	The <i>Oxy-Cope and the Anionic Oxy-Cope Rearrangements</i>	123
4.4.3	The <i>Amino- and Aza-Cope Rearrangements</i>	126
4.4.4	The <i>Claisen Rearrangements</i> and Their Modified Versions: The Carroll, Eschenmoser, Ireland, Johnson, Gosteli, Bellus, and Enzymatic Claisen Rearrangements	129
4.4.5	The <i>Thio- and Aza-Claisen Rearrangements</i>	137
4.5	[2,3]-Sigmatropic Rearrangements	140
4.5.1	Overview of Different Types of [2,3]-Sigmatropic Rearrangements	140
4.5.2	[2,3]-Sigmatropic Rearrangements of Allyl Ammonium Ylides	141
4.5.3	[2,3]-Sigmatropic Rearrangements of Benzyl Ammonium Ylides: The Sommelet–Hauser Rearrangement	143
4.5.4	[2,3]-Sigmatropic Rearrangement of Allyl Sulfonium Ylides	144

4.5.5	[2,3]-Sigmatropic Rearrangements of Allyl Sulfoxides: The Mislow–Evans Rearrangements	145
4.5.6	[2,3]-Sigmatropic Rearrangements of Allyl Selenoxides	146
4.5.7	[2,3]-Sigmatropic Rearrangements of Anions of Allyl Ethers: The Wittig and Aza-Wittig Rearrangements	146
4.5.8	[2,3]-Sigmatropic Rearrangements of Allyl Amine Oxides: The Meisenheimer Rearrangement	148
4.6	[3,5]-Sigmatropic Rearrangement	148
4.7	[4,5]-Sigmatropic Rearrangement	149
4.8	[5,5]-Sigmatropic Rearrangement	149
4.9	[9,9]-Sigmatropic Rearrangement	150
4.10	Problems	151
4.11	Further Reading	156
	References	156
5	Group Transfer Reactions	161
5.1	Introduction	161
5.2	The <i>Ene Reactions</i>	161
5.2.1	Overview of the Ene Reactions	161
5.2.2	Stereochemistry and Regioselectivity	163
5.2.3	Applications of Intermolecular-, Intramolecular-, and Enantioselective-Ene Reactions	165
5.3	The Metallo-Ene Reactions	169
5.4	The Retro-Ene Reactions	170
5.5	Diimide and Related Reductions	171
5.6	Thermal Elimination Reactions of Xanthates, N-Oxides, Sulfoxides, and Selenoxides	173
5.7	Problems	174
5.8	Further Reading	176
	References	176
 Part II Photochemical Reactions		
6	Principles of Photochemical Reactions	181
6.1	Introduction	181
6.2	Light Sources Used in Photochemical Reactions	182
6.3	Laws of Photochemistry	182
6.4	The <i>Beer–Lambert’s Law</i> of Light Absorption	183
6.5	Physical Basis of Light Absorption by Molecules: The <i>Franck–Condon Principle</i>	184
6.6	Electronic Transitions and Their Nomenclature	185
6.7	Spin Multiplicity of Electronic States	186

6.8	The HOMO and LUMO Concept of Electronic Transitions . . .	187
6.9	The Selection Rules for Electronic Transitions	187
6.10	Physical Properties of Excited States: Jablonski Diagram	188
6.11	Lifetimes of Electronic Excited States.	190
6.12	Efficiency of Photochemical Processes: Quantum Yield of Photochemical Reaction	191
6.13	Intramolecular Process of Excited States: Fluorescence and Phosphorescence	191
6.13.1	Fluorescence and Its Measurement	191
6.13.2	Kasha's Rule for Fluorescence	193
6.13.3	Vavilov's Rule for Fluorescence	193
6.13.4	Phosphorescence and Its Measurement	194
6.14	Intermolecular Physical Processes of Excited States: Photosensitization Processes	195
6.14.1	Photosensitization/Quenching and Excimer/Exciplex Formation.	195
6.14.2	The Stern–Volmer Equation for Determination of Quenching Rate.	196
6.14.3	Deviation from Stern–Volmer Kinetics	197
6.14.4	The Excimers and Exciplexes	198
6.14.5	Long-Range Energy Transfer Process: The FRET Process	199
6.14.6	Short-Range Energy Transfer Process: The Dexter Theory of Energy Transfer	201
6.14.7	Photodynamic Tumor Therapy Using Singlet Oxygen	204
6.14.8	Photo-induced Electron Transfer (PET) Process.	205
6.14.9	The Marcus Theory of Electron Transfer.	207
6.15	Photochemical Reactions and Their Kinetics	210
6.15.1	Determination of the Excited State Configuration	211
6.15.2	Determination of the Yield of Products	211
6.15.3	Determination of the Lifetime of Intermediates	212
6.15.4	Low-Temperature Matrix Studies.	212
6.16	Further Reading	213
	References.	213
7	Photochemistry of Alkenes, Dienes, and Polyenes.	215
7.1	Introduction	215
7.2	<i>Cis–Trans</i> -Isomerizations	215
7.2.1	<i>Cis–Trans</i> -Isomerizations of Alkenes.	215
7.2.2	<i>Cis–Trans</i> -Isomerization of Dienes	218
7.3	Photochemical Electrocyclic and Addition Reactions	219

7.4	Photochemical [2+2]-Cycloaddition and Dimerization Reactions	225
7.5	Photochemical Rearrangements	226
7.5.1	The di- π -Methane Rearrangements	227
7.5.2	The aza-di- π -Methane Rearrangements	233
7.5.3	The tri- π -Methane Rearrangements	234
7.6	Problems	236
7.7	Further Reading	237
	References	237
8	Photochemistry of Carbonyl Compounds	241
8.1	Introduction	241
8.2	Hydrogen Abstraction and Fragmentation Reactions	242
8.3	Cycloaddition and Rearrangement Reactions of Unsaturated Carbonyl Compounds	251
8.4	Isomerization of Unsaturated Carbonyl Compounds	260
8.5	Cycloaddition Reactions of Carbonyl Compounds with Alkenes	261
8.5.1	Limitations	268
8.6	Problems	271
8.7	Further Reading	272
	References	272
9	Photochemistry of Aromatic Compounds	277
9.1	Introduction	277
9.2	Photoisomerization Reactions of Aromatic Compounds	277
9.3	Photocycloaddition Reactions of Aromatic Compounds with Unsaturated Compounds	278
9.3.1	Photo-Diels–Alder Cycloaddition Reactions of Aromatic Compounds	287
9.4	Photo-Induced Hydrogen Abstraction and Addition Reactions of Aromatic Compounds	288
9.5	Photocyclization Reactions of Aromatic Compounds	289
9.6	Photorearrangement Reactions of Aromatic Compounds	290
9.7	Photooxidation Reactions of Aromatic Compounds	292
9.8	Photodimerization Reactions of Aromatic Compounds	292
9.9	Photosubstitution Reactions of Aromatic Compounds	294
9.10	Problems	296
9.11	Further Reading	297
	References	298
10	Photofragmentation Reactions	301
10.1	Introduction	301
10.2	The <i>Barton Reaction</i>	302
10.3	The <i>Hypohalite Reactions</i>	304
10.4	The <i>Hofmann–Löffler–Freitag Reaction</i>	307

10.5	Problems	311
10.6	Further Reading	312
	References	312
11	Photochemistry in Nature and Applied Photochemistry	315
11.1	Introduction	315
11.2	Depletion of Stratospheric Ozone Layer from Photochemical Degradation	315
11.3	Photochemical Smog in Polluted Zones of Troposphere	316
11.4	Photochemistry of Vision: Geometrical Isomerisation of Retinal	317
11.5	Phototherapy of Neonatal Jaundice	318
11.6	Photosynthesis of Plants and Bacteria	319
	11.6.1 Artificial Photosynthesis	323
11.7	Photo-Induced DNA-Damage and Its Repair	323
11.8	Conservation of Solar Energy as Electrical Energy: Photovoltaic Solar Cells	323
11.9	Photo-Induced Supramolecular Devices	328
11.10	Further Reading	330
	References	330
	Appendix	333
	Index	347

Essentials of Pericyclic and Photochemical Reactions

Dinda, B.

2017, XXV, 350 p. 69 illus., 4 illus. in color., Hardcover

ISBN: 978-3-319-45933-2
