1 Nonlinear Phenomena and Kinetic Mechanism of a Gaseous Branching Chain Process by the Example of Thermal Decomposition of Nitrogen Trichloride	1
1.1 Theories of Flame Propagation in Gases (a Brief Review)	2
1.2 Propagation of Non-thermal Flame in the Low-Pressure Thermal Decomposition of Nitrogen Trichloride	10
1.2.1 Experimental	12
1.2.2 Discussion	13
1.3 On the Nature of the Upper Limit of Non-thermal Flame Propagation in the Reaction of Thermal Decomposition of NCl_3	26
1.4 Kinetic Mechanism and Chemical Oscillations in the Branching Chain Decomposition of Nitrogen Trichloride	34
1.5 Promotion of Nitrogen Trichloride Decomposition with the Additives of Molecular Hydrogen in the Vicinity of the Lower Limit of Thermal Ignition	42
1.5.1 Experimental	43
1.5.2 Discussion	44
1.6 Conclusions	52
References	53
2 Nonlinear Effects in Silanes Oxidation and Chlorination in Gaseous Phase: Collecting a Puzzle	57
2.1 The Investigation into Dichlorosilane Chlorination in the Presence of Propylene as Inhibitor and Kr as Deactivator at Low Pressures and 293 K	58
2.2 Non-thermal Flame Propagation in Monosilane and Dichlorosilane Oxidation	66

2.3	A Long-Lived Intermediate in the Oxidation of Monosilane and Dichlorosilane	69
2.4	Experimental.	71
2.5	Discussion	71
2.6	Conclusions	75
	References.	76
3	Electric Phenomena in Silanes Chlorination and Oxidation.	79
3.1	Chemiiionization in the Chlorination of Dichlorosilane (DCS) at Low Temperatures and Pressures	82
3.1.1	Experimental.	82
3.1.2	Discussion.	83
3.2	Interrelation Between Chemiiionization and Phase Formation in the Low Temperature Branched Chain Process by the Example of Dichlorosilane Oxidation	85
3.3	Investigation into Thermal Ignition of Dichlorosilane Oxidation by Means of High-Speed Framing Schlieren Cinematography	90
3.3.1	Experimental.	91
3.3.2	Discussion.	92
3.4	Influence of Constant Electric Field in the Absence of Discharge on Kinetic Regularities of Dichlorosilane Oxidation	97
3.4.1	Experimental.	97
3.4.2	Discussion.	99
3.5	Conclusions	105
	References.	106
4	Excited Intermediates in Silanes Combustion	109
4.1	Flame Emission Spectra Over the Region of 400–600 Nm in Low-Pressure Silane and Dichlorosilane Oxidation	109
4.1.1	Experimental.	114
4.1.2	Discussion.	115
4.2	NIR Investigation of Hydro Peroxide Radicals in the Rarefied Flame of Dichlorosilane Oxidation at Low Pressures and 293 K.	120
4.2.1	Experimental.	121
4.3	Conclusions	127
	References.	127
5	Reactions of Hydro Peroxide Radicals in Hydrogen Combustion	131
5.1	Participation of Previously Adsorbed Hydrogen Atoms in the Branching Chain Process of Deuterium Combustion	131
5.1.1	Experimental.	134
5.1.2	Discussion.	135

5.2	Effects of Reactive Admixtures on the Near-IR Emission Spectra of Hydrogen and Deuterium Oxidation Flames	138
5.2.1	Experimental	139
5.2.2	Discussion	141
5.3	Conclusions	149
	References	149
6	Flame Acceleration in Reactive Gas Flows	153
6.1	Reactive Gas Flows: Governing Parameters	154
6.2	Relative Contribution of Gas Dynamics and Chemical Factors into Features of Flame Penetration Through the Small Openings in a Closed Cylindrical Reactor	165
6.2.1	Experimental	166
6.3	Establishment of Gas Dynamics and Kinetic Features of Penetration of Methane-Oxygen Flames Through Complex Obstacles by Means of 3D Spectroscopy and High-Speed Filming	174
6.4	Conclusions	182
	References	183
7	Influence of Hydrocarbon Additives on the Velocity of Detonation Wave and Detonation Limits by the Example of the Reaction of Hydrogen Oxidation	187
7.1	Experimental	192
7.2	Discussion	193
	Appendix	200
	References	204
8	Influence of Metallic Pt on Hydrogen and Methane Combustion	207
8.1	Cellular Combustion and Delay Periods of Ignition of Near Stoichiometric H ₂ —Air Mixtures Over Pt Surface	207
8.2	The Features of Ignition of Hydrogen-Air Mixtures Over Pt at Atmospheric Pressure	215
8.2.1	Experimental	216
8.2.2	Discussion	216
8.3	Experimental Investigation into the Interaction of Chemical Processes on a Pt Wire and Turbulent Flows at Flame Penetration Through Obstacles in the Presence of Iron Nanopowder	222
8.3.1	Experimental	224
8.3.2	Discussion	225
8.4	Conclusions	229
	References	229

Key Factors of Combustion

From Kinetics to Gas Dynamics

Rubtsov, N.M.

2017, XXIII, 232 p. 96 illus., 32 illus. in color., Hardcover
