

Contents

1	Introduction: Best Matching and Best Match.	1
1.1	What Is Best Matching?	1
1.2	Definitions and Scope	4
1.2.1	Distributed Systems	6
1.2.2	<i>Collaboration Versus Competition</i>	8
1.3	Best Matching in Practice	9
1.4	Summary	12
	References	14
2	The PRISM Taxonomy of Best Matching.	19
2.1	Framework.	19
2.1.1	D1: Sets of Individuals.	21
2.1.2	D2: Matching Conditions	22
2.1.3	D3: Matching Criteria.	26
2.1.4	D+: Time or Progression	29
2.1.5	The Prismatic Structure of the PRISM Taxonomy	30
2.2	Four Examples of the PRISM Taxonomy Application	30
2.2.1	Balancing Collaborative Assembly Lines ($M : 1/RC, PR, RS/ - -, WS$)	30
2.2.2	Part Pairing for Concurrent Loading-Machining ($1 : 1/-, OS$)	31
2.2.3	Dynamic Teaming with Interdependent Preferences ($M : 1/RC, IP/ +, OS/DI, ES$)	33
2.2.4	Location-Allocation Decisions in CNO ($1 : M : M/RC, PR, RS/ + -, WS$)	35
2.3	Summary	37
	References	41
3	Mathematical Models of Best Matching	43
3.1	Why Mathematical Modeling for Best Matching?	43
3.2	D1. Sets	45
3.2.1	One-to-One Matching.	46

3.2.2	Generalized Matching	47
3.2.3	Multi-Dimensional Matching	48
3.3	D2. Conditions	49
3.3.1	Resource-Constrained Matching	49
3.3.2	Matching with Precedence Relations	51
3.3.3	<i>Matching with Resource Sharing</i>	51
3.3.4	Matching with Interdependent Preferences	53
3.3.5	Layered Matching	56
3.4	D3. Criteria	57
3.5	D+. Static Versus Dynamic Matching	59
3.6	Summary	60
	References	62
4	Distributed Decision-Making and Best Matching	63
4.1	Single Versus Multiple Decision-Makers	63
4.2	Distribution of Decisional Abilities	65
4.2.1	Example 1: Intelligent Warehouse Management Systems	68
4.2.2	Example 2: Precision Agriculture	70
4.2.3	Alternative Configurations—Advantages and Limitations.	72
4.3	Nature of Interactions.	74
4.4	Summary	76
	References	79
5	Static and Centralized Matching	81
5.1	Motivation for Using Algorithms	81
5.2	Heuristics and Exact Algorithms	83
5.2.1	Hungarian Method	83
5.2.2	Deferred Acceptance Algorithm	86
5.2.3	Lagrangian Relaxation Method.	89
5.2.4	Branch-and-Bound Method.	98
5.3	Metaheuristics	102
5.3.1	<i>Genetic Algorithm (GA)</i>	103
5.3.2	Greedy Randomized Adaptive Search Procedure (GRASP)	107
5.3.3	<i>Ant Colony Optimization (ACO)</i>	110
5.3.4	Tabu Search	114
5.4	Summary	118
	References	122
6	Dynamic and Distributed Matching	125
6.1	Why Are Static and Centralized Algorithms not Always Sufficient?	125
6.2	Real-Time Optimization.	127
6.2.1	Periodic Review Method	129
6.2.2	Continuous Review Method	134

6.3	Distributed Control	142
6.3.1	Multi-agent Systems	142
6.3.2	Interaction Protocols	146
6.4	The “AI” Challenges (Artificial Intelligence; Analytics and Informatics).	153
6.4.1	Artificial Intelligence	153
6.4.2	Analytics and Informatics	157
6.5	Summary	159
	References	163
7	Extended Examples of Best Matching	167
7.1	Understanding Through Analogy	167
7.2	E_1 : Collaborative Supply Networks ($M: 1/RC, RS/-, OS/DI$).	170
7.2.1	Mathematical Formulation	172
7.2.2	D+: Task Administration Protocol	174
7.2.3	Measured Impact	179
7.2.4	Discussion	180
7.3	E_2 : Collaborative Assembly Lines ($M: 1/RC, PR, RS/ - - -, GP/DI$)	182
7.3.1	Mathematical Formulation	184
7.3.2	D+: Collaborative Multi-agent System	188
7.3.3	Measured Impact	192
7.3.4	Discussion	192
7.4	E_3 : Clustering with Interdependent Preferences ($M: 1/RC, IP/ + , OS/ES$).	194
7.4.1	Optimal Clustering: Genetic Algorithm (GA)	196
7.4.2	D+: Association/Dissociation	199
7.4.3	Measured Impact	201
7.4.4	Discussion	201
7.5	E_4 : Collaborative Service Enterprises ($1:M:M/RC, RS/ + -, WS$)	202
7.5.1	Mathematical Formulation	204
7.5.2	Optimization: Tabu Search	206
7.5.3	Measured Impact	210
7.6	Summary	211
	Appendix 1: Notation	213
	References	217
8	Frontiers in Best Matching	221
8.1	Emerging Technologies Dealing with Best Matching.	221
8.1.1	Connected Robots	222
8.1.2	Cloud Manufacturing	222
8.2	Technical Challenges of Best Matching	223
8.2.1	Efficient Computation and Communication	223
8.2.2	Conflict and Error Detection and Prevention	224

8.2.3	Incentives for Collaboration	224
8.2.4	Data Availability and Reliability	225
8.3	Summary	226
	References	228
