Contents

1 Introduction 1
References 4

2 Graphs and Optimization 5
2.1 Graph Theory 5
2.1.1 Fundamental Definitions 5
2.1.2 Paths, Forests and Multipartite Graphs 7
2.1.3 Euler's Formula and Planar Graphs 9
2.1.4 Hypergraphs 9
2.1.5 Matchings on Graphs 10
2.2 Optimization Problems 11
2.2.1 Combinatorial Optimization 12
2.2.2 Algorithms for Assignment 14
References 23

3 Random Optimization Problems and Statistical Mechanics 25
3.1 Random Optimization Problems 25
3.1.1 Random Matching Problems 26
3.2 Disordered Systems, Spin Glasses and Assignment 31
3.2.1 Preliminaries: The Ising Model 32
3.2.2 Spin Glasses 36
3.2.3 The Solution of the Random Matching Problem by Replicas 43
3.3 The Cavity Method 47
3.3.1 General Theory of the Cavity Method and Belief Propagation 47
3.3.2 Belief Propagation for the Assignment Problem 54
References 57

4 Euclidean Matching Problems 59
4.1 Euclidean Optimization Problems 59
4.2 Euclidean Matching Problems 61

4.3 Random Euclidean Monopartite Matching Problem by Replicas . . . 64
4.3.1 Mean Field Approximation . . . 71
4.3.2 Polygonal Corrections and Zero Temperature Limit . . . 73
4.4 The Monge–Kantorovič Transport Problem . . . 81
4.5 Ansatz for the Euclidean Matching Problem . . . 85
4.5.1 Correlation Functions for the rEb . . . 92
4.6 One Dimensional gr–rEb: Exact Solution for Convex Weights . . . 99
4.6.1 Preliminaries . . . 99
4.6.2 General Solution . . . 101
4.7 Functional Approach to the Quadratic rEb . . . 110
References . . . 117

5 Conclusions and Perspectives . . . 119

Appendix A: Additional Classical Results on Glasses . . . 121

Appendix B: The Wiener Process and the Brownian Bridge Process . . . 129

Curriculum Vitae . . . 135
