

Contents

1	Introduction	1
1.1	Renewable Energy Sources for Sustainable Development	1
1.2	Towards Energy Flexible Manufacturing Systems	4
1.3	Objectives and Structural Outline	6
	References	8
2	Manufacturing Systems and Variable Renewable Electricity Supply	11
2.1	Manufacturing Systems	11
2.1.1	Definition and Classification	11
2.1.2	Manufacturing System Management and Control	14
2.1.3	Energy Demand of Manufacturing Processes and Systems	15
2.1.4	Energy Flexibility of Manufacturing Systems and Embodied Energy Storage	18
2.2	Conventional and Renewable Electricity Supply	22
2.2.1	Definition and Classification	22
2.2.2	Conventional Electricity Generation	24
2.2.3	Characteristics of Renewable Electricity Generation	27
2.2.4	Decentralized Generation	29
2.2.5	Electricity Distribution, Markets, and Grid Stability	30
2.3	Integrating Renewable Electricity Supply	33
2.3.1	Energy Storage for Renewable Energy Integration	33
2.3.2	Demand Side Management for Renewable Energy Integration	39
2.4	Intermediate Summary and Conclusion	43
	References	44
3	Existing Approaches in the Field of Energy Flexible Manufacturing Systems	51
3.1	Selection and Classification Method	51
3.2	Energy Efficiency Centered Approaches	54

3.3	Classification of Energy Flexibility Centered Approaches	58
3.4	Review of Energy Flexibility Centered Approaches	60
3.4.1	Tactical Planning.	60
3.4.2	Operational Planning.	62
3.4.3	Execution	80
3.5	Evaluation of Approaches.	88
3.5.1	Evaluation Criteria	88
3.5.2	Evaluation of Approaches	91
3.6	Derivation of Research Demand	92
	References.	96
4	Manufacturing System Real-Time Energy Flexibility	
	Control and Improvement	103
4.1	Concept Objective and Requirements	103
4.2	Concept Overview	109
4.2.1	Concept Structure	112
4.3	Energy System	116
4.3.1	Electricity Supply	117
4.3.2	Electricity Demand	118
4.3.3	Electricity Balance	118
4.3.4	Battery/EV(s)	120
4.3.5	Compressor Park.	125
4.4	Manufacturing System	133
4.4.1	Individual Component Behavior	133
4.4.2	Component Interaction and Decentralized Control	142
4.5	Central Energy Control.	145
4.6	Analysis and Evaluation.	153
4.6.1	Data Aggregation and Indicator Calculation	154
4.6.2	Real-Time Reporting and Visualization.	154
4.6.3	Scenario Evaluation.	155
4.6.4	Experiment Evaluation	161
4.7	Application Cycle.	161
4.8	Intermediate Summary and Conclusion.	167
	References.	168
5	Prototypical Implementation	173
5.1	Implementation Options and Background.	173
5.2	Background on Simulation	175
5.2.1	Simulation Modeling.	175
5.2.2	Verification and Validation of Simulation Models.	177
5.2.3	Software Packages	178
5.3	Mixed Discrete-Event and Continuous Time Simulation	
	Model.	178
5.3.1	Manufacturing Process	179
5.3.2	Energy Control	183

5.3.3	Additional Agents and Modules	185
5.3.4	User Interface	186
5.4	Intermediate Conclusion	188
	References.	189
6	Example Application.	191
6.1	General Parameters and Structure	191
6.2	Achieving an Autarkical Manufacturing Line	192
6.2.1	Background and Hypotheses Formulation	192
6.2.2	General Structure and Parameterization.	194
6.2.3	Hypothesis Testing	195
6.2.4	Case Study Summary and Conclusion.	206
6.3	Aluminum Die Casting Case Study	208
6.3.1	Background and Process Structure	209
6.3.2	Experiments and Results	210
6.4	Application Summary.	213
	References.	213
7	Summary, Critical Review and Outlook	215
7.1	Summary	215
7.2	Critical Review.	216
7.3	Outlook	219
	References.	222
	Appendix A: Research Evaluation Criteria.	223
